Al Ward, W5LUA, of Allen, Texas, is the first person to achieve the ARRL's Worked All States (WAS) on 1296 MHz, making him 1296 MHz WAS #1. Ward first started on his pursuit January 25, 1977, with his first 1296 MHz contact with Leroy May, W5HN (SK). His 30 year quest ended last week, with confirmed contacts with Wyoming, Utah and Idaho, giving Ward his last three needed states, thanks to Paul Perryman's, WA5WCP, EME DXpedition.

"I couldn't have done this without Paul," Ward said. "Also, thanks to Ron Roche, K0ALL, and Barry Malowanchuk, VE4MA, in North Dakota for number 47 in August. Without them, it just wouldn't have been possible." After collecting his 50th QSL card, Ward drove from his home in Texas to Little Rock, Arkansas so ARRL President Joel Harrison, W5ZN, could verify his cards and complete his WAS paperwork. "Verifying QSL cards from 30 years of activity brought back a lot of memories of several stations active on 1296, many who are Silent Keys now," Harrison said.

==>SOLAR UPDATE

Tad "Sunspots Cast a Glare in My Eyes" Cook, K7RA, this week reports: The sun has been blank, no visible sunspots, for the past seven days, September 7-13. We may not see another spot until September 22, just before the autumnal equinox. Thursday evening, September 13, Spaceweather.com mentioned a coronal wind hitting earth this evening, September 14. The Interplanetary Magnetic Field (IMF) points south, making the Earth vulnerable to solar wind, but other sources don't call for an increase in geomagnetic activity today. We might assume that a solar wind from 27 to 28 days ago could return at this time, based on the rotation of the Sun relative to Earth. But looking back four weeks

does not reveal any heightened activity. Of course, it could be that the IMF pointed north, protecting earth from the coronal wind. Sunspot numbers for September 6 through 12 were 12, 0, 0, 0, 0, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 66.7, 67.1, 66.6, 66.7, 66.9, 66.1 and 65.9 with a mean of 66.6. Estimated planetary A indices were 13, 12, 6, 2, 2, 2 and 2 with a mean of 5.6. Estimated mid-latitude A indices were 8, 10, 3, 2, 2, 2 and 2 with a mean of 4.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, the ARRL 10 GHz and Up Contest is September 15-16. The NCCC Sprint (CW) is September 14 and 15. The SARL VHF/UHF Contest is September 14-16. QRP Afield is September 15. Look for these contests the weekend of September 15-16: Scandinavian Activity Contest (CW), South Carolina QSO Party, Washington State Salmon Run and the QCWA Fall QSO Party. The North American Sprint (SSB) is September 16. The Run for the Bacon QRP Contest and the 144 MHz Fall Sprint are September 17. The NAQCC Straight Key/Bug Sprint is September 20. Next week, the NCCC Sprint (CW) is September 21, while the AGCW VHF/UHF Contest is September 22. The Scandinavian Activity Contest (SSB) and CIS DX Contest are September 22-23. The SKCC Weekend Sprint is September 23 and the 222 MHz Fall Sprint is September 25. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education course registration: Registration remains open through Sunday, September 23 for these online courses beginning on Friday, October 5: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Radio Appreciation Day Is September 15: Amateur Radio operators around the country really don't need a special day to promote Amateur Radio, but Saturday, September 15 has been declared Amateur Radio Public Awareness Day. As part of the Department of Homeland Security's National Preparedness Month, ARRL Public Information Officers (PIOs) are using the day as a way to make the media more aware of our Service and especially its role in emergency communications. The purpose of Amateur Radio Public Awareness Day, held the third Saturday in September, is to make the public more aware of the existence, purposes and benefits of Amateur Radio. ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said, "Through events such as Amateur Radio Public Awareness Day,

hams can take the opportunity to tell not only their friends and neighbors about the benefits of the Amateur Radio Service, they can take the opportunity to let the general public know, too. People willing to make face to face contacts are always the best ambassadors we have for Amateur Radio."

* Representative Ross (D-AR), WD5DVR, Attends ARRL Arkansas State Convention: Arkansas congressman Mike Ross, WD5DVR, was a featured speaker at the ARRL Arkansas State Convention on Saturday, September 8. Ross, who represents Arkansas' 4th District, spoke about the ham radio legislation he introduced in Congress, the "Emergency Amateur Radio Interference Protection Act of 2007" (HR 462). ARRL Lab Manager Ed Hare, W1RFI, was also at the convention, speaking about BPL. Held at Queen Wilhelmina State Park in Mena, the convention drew hams from several nearby states including Texas, Oklahoma, Louisiana and Mississippi. Ross is one of two licensed amateurs in congress; Greg Walden, W7EQI, of Oregon's 2nd District, is the other.

* ARRL Helps MFJ Celebrate 35 Year Anniversary: MFJ Enterprises observed their 35th anniversary with "A Day in the Park" open house September 7-8 at their Starkville, Mississippi headquarters. ARRL Chief Development Officer Mary Hobart, K1MMH, was on hand to help MFJ celebrate, as were Mississippi Section Manager Malcolm Keown, W5XX; ARRL Delta Division Director Henry Leggette, WD4Q, and Starkville Mayor R. Dan Camp. This two-day celebration was filled with tours of MFJ's facilities, a Friday evening bar-b-que and a Saturday fried chicken picnic. MFJ makes Amateur Radio equipment such as tuners, SWR wattmeters, antenna analyzers and power supplies. Martin Jue, K5FLU, founded the company in 1972 while he was still attending graduate school at Mississippi State University. A ham since high school, Jue decided to build products for hams -- his first products were active filters for CW and phone, selling for $9.95 and $12.95, respectively. Thirty-five years later, MFJ features more than 1000 products.

* ARISS Update: According to ARRL ARISS Program Manager Rosalie White, K1STO, Clay Anderson, KD5PLA, has started to make general QSOs with hams after signing off after making school QSOs, even turning on packet radio for a while. Anderson will continue making school QSOs until he returns to Earth, currently scheduled for late next month. Due to the schedule on the International Space Station, the crew will be "terribly busy" for the next six months; White said that ARISS QSO totals might be low during this time. The next contacts are scheduled for Monday, September 17 with Mitchell Elementary School in Ann Arbor, Michigan, and Friday, September 21 with Pueblo Magnet High School in Tucson, Arizona. To date, the ARISS program has had 315 Earth-to ISS QSOs. For more information on the Amateur Radio on the International Space Station program, please see the ARISS Web page <http://www.rac.ca/ariss/oindex.htm#ARISS%20Status>.

* FCC Job Announcement: The Federal Communications Commission has announced three job openings for Telecommunications Specialists in their Columbia, Maryland office. Starting salaries range from

$55,706-$103,220; relocation assistance is not available. Knowledge of high frequency propagation is a must. To be considered for these full-time, permanent positions, successful applicants must pass a background investigation, be eligible for a security clearance, have US citizenship, pass a drug test and be available for shift work. For more information, please send an e-mail to Diane Graham at the FCC <Diane.Graham@fcc.gov> and reference job number DEU-PSHS-2007-0006. The application deadline for these positions is Thursday, September 27. More about this opening can be found on the USAJOBS Web site <http://jobsearch.usajobs.opm.gov/getjob.asp?JobID=61989717&jbf574=FC00&brd=3876&AVSDM=2007%2D09%2D05+00%3A00%3A06&sort=rv&vw=d&Logo=0&FedPub=Y&caller=%2Fagency%5Fsearch%2Easp&FedEmp=N&SUBMIT1.x=51&SUBMIT1.y=2&ss=0&TabNum=1&rc=7>.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

==> GET READY FOR THE SECOND ANNUAL ARRL ON-LINE AUCTION!

The Second Annual ARRL On-Line Auction kicks off October 24, running
until November 2 on the ARRL Web site <http://www.arrl.org/auction>.
This is your chance to pick up one-of-a-kind Amateur Radio items. To see
```

what the Auction will offer this year, be sure to check out the Auction preview that begins October 17. Last year, the Auction attracted more than 4300 bidders from 36 countries. While the majority of buyers were from the USA, Canada and the UK, there were buyers from Australia, Malaysia, Grenada and Tanzania.

According to ARRL Chief Operating Officer Harold Kramer, WJ1B, "Last year's on-line auction was our first and it was a great success. When the bidding ended, we realized that we had sold 104 items and we had raised just over $37,000." Proceeds from the auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as creating instructional materials.

This year's auction will include many products tested by the ARRL Lab for QST Product Review. These items include an ICOM IC-7800, a Ten-Tec Omni VII, a Palstar Auto Antenna Tuner, an MJF 974H Balanced Antenna Tuner and a Heil Traveler Headset. There will be many vintage items offered, including the antique transmitter featured in John Dilks' "Old Radio" column in the November 2007 issue of QST. Also, returning by popular demand will be five ARRL Lab unique "junque" boxes.

==> IARU REGION 2 CONFERENCE COMPLETES ITS WORK IN BRASILIA

Completing a week that included lengthy committee meetings and a half-day tour of Brazil's capital city, the delegates to the 16th IARU Region 2 General Assembly in Brasilia met in Plenary assembly on Friday, September 14 to complete their work. Members of the ARRL's delegation included President Joel Harrison, W5ZN; Vice President Kay Craigie, N3KN, and husband Carter, N3AO; CEO David Sumner, K1ZZ; Southeastern Division Director Frank Butler, W4RH; Chief Technology Officer Paul Rinaldo, W4RI, and Technical Relations Specialist Jon Siverling, WB3ERA.

Committee A, which deals with administrative matters, was chaired by Norma Leiva, HR2NL, of Honduras; the ARRL's Siverling served as secretary and interpreter. This committee presented the first report of the Conference and made a number of recommendations for Conference action, all of which were adopted. They include:

The establishment of a Region 2 Relief Fund with an initial transfer of $5000 from the general reserve of Region 2; additional contributions will be solicited. The Fund will be administered by the Executive Committee and will be available solely to assist Region 2 Member-Societies whose club stations and buildings, including antenna systems, are damaged by natural disaster.

The Executive Committee will develop a conference call process for Region 2 that includes objectives, action plans, due dates and score cards in order to improve communication among the Member-Societies and the Executive Committee

An offer by Radio Club Argentino to be responsible for the Spanish translation of the IARU Region 2 electronic bulletin was accepted.

Terms of reference for the Amateur Radio in Education Project that was adopted by the 15th General Assembly in 2004 were revised slightly to simplify the grant application process and encourage applications.

The Conference recognized Wolf Baron, TI2BY, of San Jose, Costa Rica, for his outstanding service to Amateur Radio by conducting on-the-air training on Sunday mornings for more than five years.

Several recommendations from the Region 2 Working Group on Emergency Communications were adopted. These include establishing an Emergency Communications Committee that will be responsible to the Executive Committee for carrying out planning, training and the maintenance of equipment and personnel inventories for emergency assistance deployment.

The Conference next received the report of Committee B/C, a combined technical and operational committee dealing with both HF and VHF/UHF matters. This committee was chaired by Ramon Santoyo, XE1KK, of Mexico City, Mexico; the ARRL's Rinaldo, served as secretary. The Plenary adopted all of the Committee's recommendations, including: A new Region 2 band plan for 160-10 meters was adopted, effective January 1, 2008. The new plan is modeled on one adopted previously by IARU Region 1, with regional differences taken into account; steps were taken to try to reduce interference to national emergency Nets, including establishing an inventory of such Nets and calling their importance to the attention of the radio amateur community; and an IARU Region 2 Diploma was approved, with some details remaining to be worked out by the Executive Committee.

The next report was from the Finance Committee, Committee D, chaired by Treasurer Noel Donawa, 9Y4NED, of Trinidad and Tobago. The Plenary accepted two recommendations from Committee D. The first is an effort to reach out to Member-Societies that have fallen behind in meeting their dues obligations to Region 2; they will be offered the opportunity to pay their back dues through 2006 at a 25 percent discount if they do so by January 15, 2008. The Plenary also directed the Executive Committee to study the existing dues structure, along with options and alternatives, and to report to the next General Assembly.

The Conference accepted the offer of the Club de Radio Aficionados de El Salvador (CRAS) to host the 17th General Assembly in 2010.

The Conference's last order of business was the election of officers and other Executive Committee members for the next three years. Rod Stafford, W6ROD, declined to stand for re-election as President but will remain a Director. Moving to the office of President is Secretary Reinaldo Leandro, YV5AMH, of Venezuela. Dario Jurado, HP1DJ, of Panama was re-elected Vice President, and Donawa was re-elected Treasurer and Director. Santoyo was newly elected as Secretary and joins the Executive Committee for the first time. The other Directors were re-elected: Daniel A. Lamoureux, VE2KA, of Canada; Pedro Rodriguez, CO2RP, of Cuba; Marco Tulio Gudiel, TG9AGD, of Guatemala; Gustavo de Faria Franco, PT2ADM, of Brazil, and Ron Szama, LU2AH, of Argentina. A provision of the Bylaws was amended to permit the Executive Committee to consist of

10 members rather than the customary nine.

The conferees expressed their deep appreciation to LABRE, host of the 16th General Assembly, for its outstanding hospitality. Forty delegates and observers representing 18 countries in the Americas -- 11 in person, seven via proxy -- attended the Conference.

==> ARRL DAKOTA DIVISION VICE DIRECTOR TO RESIGN AS OF OCTOBER 1

Dakota Division Vice Director Twila Greenheck, N0JPH, announced her resignation effective Monday, October 1, due to family responsibilities; her term expires in 2008. She plans to continue serving the League as an ARRL Education Advisor and consultant to the Board of Directors' ad hoc Scouting Committee.

"Being part of the ARRL Board Family has been an incredible experience that I will always remember and cherish. The opportunity to serve with Director Jay Bellows representing the amateurs in the Dakota Division has surely been an honor," Greenheck said.

Bellows said, "Twila has been a joy to work with over the past eight years. From the first time I met her to the present she has been a tireless and effective advocate of increased ARRL efforts to reach out to youth and strengthen education in Amateur Radio. I look forward to her continued service to the League, especially as a member of the ARRL's Educational Advisory Group."

ARRL President Joel Harrison, W5ZN, will appoint a replacement.

==> ARRL ROANOKE DIVISION DIRECTOR TO BE FETED BY RADIO CLUB OF AMERICA

The Radio Club of America (RCA) has named ARRL Roanoke Division Director Dennis Bodson, PhD, PE, W4PWF, of Arlington, Virginia, as the recipient of the Sarnoff Citation. The award is given to recognize significant contributions to the advancement of electronic communications. Barry Goldwater, K7UGA (SK), was the first recipient of the Sarnoff Citation in 1973.

"I was shocked when I heard that I would receive the Sarnoff Citation," Bodson said. "I find it difficult to believe that I'll be on the dais with Walter Cronkite, KB2GSD." Bodson, Cronkite and QST and QEX author John S. "Jack" Belrose, PhD, VE2CV, are to receive the RCA's Armstrong Medal, the RCA's foremost achievement award and named for its first recipient, Major Edwin Armstrong, at the RCA's Annual Awards Banquet and Annual Meeting and Technical Symposium on November 16 in New York City. Andy Rooney of CBS's "60 Minutes" will be the keynote speaker.

Bodson, who is retired -- "Retired means different things to different people. I work, but on different things," he said -- displays an energy level that hardly anyone can match. Bodson is retired as chief of the Technology and Standards Division of the National Communications System (NCS) in 1998. In October 2005, he became a member of the executive staff of the Institute for Defense and Homeland Security where he is

director of Telecommunications and Sensor Systems. Bodson is an ARRL Life Member and a member of the Institute of Electrical and Electronics Engineers (IEEE).

"Fifteen years ago, I had the opportunity [to serve on the ARRL Board of Directors]. I knew the former Division Director, and he suggested, 'get involved and run for Vice Director.' I was elected to that, and when he retired, I moved up to Director. I have enjoyed it, but everything comes to a change. I still have this year and two more years, and then I'll decide whether to run for re-election," Bodson said. He also is Vice President of the Arlington (Virginia) Amateur Radio Club (AARC).

Born in Washington, DC, Bodson always wanted to be an electrical engineer. He earned a BEE in 1961 and an MEE in 1963, both from The Catholic University of America in Washington. From 1963-1966, he served as an officer in the US Air Force assigned to the National Security Agency. From 1966-1969, he was with Vitro Laboratories, Atlantic Research Corporation and the US Army Materiel Command where he was engaged in research and development and systems engineering.

In 1970, Bodson began his long career with NCS, an interagency group of 23 federal departments and agencies managed by the Department of Homeland Security (DHS). While at NCS, Bodson continued his formal education and earned a Master's in public administration in 1976 from the University of Southern California's Washington Center for Public Affairs, and completed his PhD in electrical engineering in 1985 from California Western University. In recognition of his accomplishments in federal service, in 1999 Dennis received the IEEE's Charles Proteus Steinmetz Award. According to the IEEE's Web site, the award is "presented to an individual for exceptional contributions to the development and/or advancement of standards in the field of electrical and electronics engineering."

IEEE has seen a lot of Bodson since his beginning days as a student engineer. "My major professor said, 'Become active in your professional society.' I took him at heart and did so and never regretted it," he said. After retiring from NCS, Bodson increased his IEEE involvement, and by 2000, he was chairman of the IEEE Vehicular Technology Society (VTS) Standards Committee, reflecting his work on standards at NCS. He was a senior editor for the VTS quarterly bulletin, "News Digest," and later became its editor. "I became editor because we needed to do something, but then we got a real editor, Dr James Irvine. We went from a bulletin to a 60 page magazine," he said. Bodson is a Life Fellow of IEEE, where new Fellowships are limited to no more than one-tenth of one percent of the membership per year, making elevation to the status of Fellow in IEEE a particularly high distinction.

Soon after his retirement from NCS, Bodson served as president of the IEEE Engineering Management Society (EMS). For his service to EMS, he was given the EMS Engineering Manager of the Year Award. The IEEE Standards Association (IEEE-SA) bestowed on Bodson the IEEE-SA Distinguished Service Award in 2002. Bodson was then was elected

President of VTS, where he continues on its board of governors as Junior Past President.

Bodson has written more than 60 technical articles and has published four books. He joined RCA in 1976, became a Fellow in 1981 and became an RCA Life Member in 1996.

The RCA banquet is open to members, non-members and guests. Registration is required; registration forms can be downloaded here <http://homeeverestkc.net/dbishop13322/registration_form/registration_form.doc>. To learn more about the Radio Club of America and their awards, please visit the RCA Web site <http://www.radioclubofamerica.org/>. The ARRL thanks RCA Fellow and ARRL Life Member Don Bishop, W0WO, for this information.

==> ARRL CONTINUES TO DEAL WITH DEPARTMENT OF DEFENSE OVER PAVE PAWS SITES

The ARRL participated in a teleconference call on Wednesday, September 19, with the Department of Defense (DoD) regarding Amateur Radio repeaters interfering with the Air Force's PAVE Paws radar system.

According to ARRL Regulatory Branch Manager Dan Henderson, N1ND, "The DoD acknowledges that it has seen changes at some repeater sites, but not all of them." He said the DoD has revisited the Massachusetts repeaters, located near Otis Air Force Base on Cape Cod, to "remeasure the numbers. Some Massachusetts repeater owners have volunteered to completely turn off their systems and some others have made changes, but more is needed at both PAVE Paws radar sites."

The DoD, Henderson continued, has identified additional sources of interference in Massachusetts. "This was not really unexpected and is part of what has become an ongoing project. The ARRL will begin working with these repeater owners as soon as the DoD provides us with specific information," he said.

In California, where more than 100 repeaters are being scrutinized by the DoD, Henderson said the majority of repeaters have not been mitigated: "The Air Force has not had a chance to revisit Beale Air Force Base for new measurements, but it will be happening soon."

Reports have circulated that a number of California repeater owners have decided to take no further action about mitigating the interference unless they receive official notice from the Federal Communications Commission. "If these reports are true," Henderson said, "it is unfortunate. The FCC has stayed abreast of the discussions between the League and the DoD, and they are prepared to act appropriately if they are contacted by the DoD."

He continued: "The DoD has indicated they are willing to allow the ARRL to continue its attempts to mitigate the interference; however, they have expressed a sense of urgency that this must come to a conclusion. Those waiting for FCC action may find it coming sooner rather than

later."

==> FCC AMATEUR RADIO ENFORCEMENT CORRESPONDENCE POSTED

On August 23, the FCC's Enforcement Bureau released new Amateur Radio enforcement actions. Todd C. Browne, KD0PA; Keith W. Coad, KW2C; Santos J. Rodriguez Colon, KP4DC; Jerry L. Counsellor, WE5JC; Pablo Diaz-Alequin, KP4MC, and Donald B. Flowers, NC4DF, all received letters from the Commission concerning their vanity call signs. These amateurs received their vanity call signs by stating they were former holders of these call signs, but the FCC can find no documentation substantiating their claims.

Robert C. Moldenhauer, W9CQ, also received a letter concerning his vanity call sign that he requested as a "close relative" of the former holder of that call sign. The FCC told Moldenhauer they can find no documentation of his claim.

Steve L. Wingate, K6TXH, received notice from the Commission that the recordings he had requested concerning complaints alleging his lack of station control and deliberate interference had been sent to him. Wingate was also granted an additional 30 days to respond to Commission correspondence.

The FCC Enforcement Bureau now posts Amateur Radio enforcement-related correspondence and documents -- with some exceptions -- on its own Web site <http://www.fcc.gov/eb/AmateurActions/Welcome.html>. Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

==>SOLAR UPDATE

Tad "All for the Love of Sun(spots)" Cook, K7RA, this week reports: Fifteen days in a row with no sunspots, but this may change soon. Take a look at sunspot numbers compared to solar flux for the current third quarter of 2007 <http://www.sec.noaa.gov/ftpdir/indices/quar_DSD.txt>. Notice that when there are zero sunspots, the solar flux (the amount of energy we receive from the Sun at a wavelength of 10.7 cm or 2800 MHz) is always below 70. Recently, the flux value has been below 70, and for some time now the US Air Force has predicted a slight rise in solar flux to 70 for today, September 21. You can see those predictions here <http://sec.noaa.gov/ftpmenu/forecasts/45DF.html>. If we examine predictions from early September on that page, note they show a return to 70 solar flux for September 17; later forecasts show it creeping out to September 18, then 19 and finally for yesterday, the prediction for today is 70. We also see the return of sunspot group 970 set for September 21-23 in September 21 Solar Region Summary <http://www.sec.noaa.gov/ftpmenu/forecasts/SRS.html>. It would be great to have at least one sunspot when fall returns. The official autumnal equinox is this weekend, September 23 at 0951 UTC. Sunspot numbers for September 13-19 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7

cm flux was 66.4, 66.8, 67.7, 67, 66.9, 66.5 and 66.8 with a mean of 66.9. Estimated planetary A indices were 2, 4, 4, 2, 2, 3 and 4 with a mean of 3. Estimated mid-latitude A indices were 1, 3, 3, 2, 1, 2 and 2 with a mean of 2. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, the NCCC Sprint (CW) is September 21, while the AGCW VHF/UHF Contest is September 22. The Scandinavian Activity Contest (SSB) and CIS DX Contest are September 22-23. The SKCC Weekend Sprint is September 23 and the 222 MHz Fall Sprint is September 25. Next week, look for the ARRL EME Competition on September 29-30. The NCCC Sprint (CW) is September 28. On September 29-30, look for the CQ Worldwide DX Contest (RTTY), CQIR - Ireland Calling, the Texas QSO Party, FISTS Coast to Coast Contest and the UBA ON Contest (CW). The ARS Spartan Sprint is October 2. The YLRL Anniversary Party (CW) is October 2-4, the German Telegraphy Contest and the 432 MHz Fall Sprint are October 3. The SARL 80 Meter QSO Party is October 4. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, October 7, 2007 for these online courses beginning on Friday October 19, 2007: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF - Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Carl Gardenias, WU6D, Files Appeal with ARRL Executive Committee: Carl Gardenias, WU6D, who was disqualified last week as a candidate in the race for Director of the ARRL Southwestern Division, filed an appeal with the ARRL Executive Committee on Monday, September 17. Gardenias was disqualified by the League's Ethics and Elections Committee for not acting promptly in response to communications from that committee requesting he correct misinformation sent out on his behalf concerning other candidates. The Executive Board is currently considering Gardenias' appeal.

* ICOM Returns as November Sweepstakes Principal Awards Sponsor: ICOM has generously agreed to serve for a third year as principal awards sponsor for the 2007 ARRL November Sweepstakes. The Amateur Radio equipment manufacturer's first such sponsorship was for the 2005 events.

The 2007 CW Sweeps takes place November 3-4, while the phone Sweeps is November 17-18. Under its agreement with ARRL, ICOM will be the principal sponsor for nearly 150 unsponsored contest plaques that recognize various levels of operating achievement in the popular annual competition. "Competitive operating events are the proving grounds for equipment, operators and antenna systems," said ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N. "ICOM Amateur Radio Products National Sales Manager Ray Novak, N9JA, and ICOM recognize the importance of these testing grounds, as well as the high levels of achievement in contests that deserve to have 'some wood on the wall.' The Amateur Radio industry has been terrific in supporting many contests and activities run by ARRL, and we know first hand that participants appreciate the attention and devotion shown to these pursuits." Patton predicts nearly 3000 entries will be received for the November Sweepstakes this fall.

* Thomas B. J. Atkins, VE3CDM (SK): Former ARRL Canadian Division Director and IARU Region 2 President Tom Atkins, VE3CDM, passed away Tuesday, September 18. He was 81. Atkins was the last Director of the ARRL's Canadian Division before the Canadian Radio Relay League (CRRL), a predecessor to the Radio Amateurs of Canada (RAC), began to operate independently in 1988. He served as ARRL Director from September 20, 1982 to January 1, 1988. Atkins also served as President of IARU Region 2 for two three-year terms, 1995-2001, after holding every other office in Region 2 -- Treasurer, Secretary and Vice President -- in succession between 1983 and 1995. He also served on the IARU Administrative Council and as an IARU Expert Consultant

* ARRL Receives MARS Call Sign: The ARRL now has a new Emergency Communications tool in its toolbox -- MARS call sign AAN1ARL. According to W1AW Station Manager Joe Carcia, NJ1Q, "The call sign was requested to reflect both the holder of the license (ARRL) and the various MARS services (Army, Air Force and Navy)." The MARS station will be housed at W1AW, the Hiram Percy Maxim Memorial Station. ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, said, "The establishment of an ARMY MARS call sign for W1AW begins a relationship with the Military Affiliate Radio System and the ARRL. Our two organizations are working toward the near-term establishment of a Memorandum of Understanding. Additionally, the League and MARS will utilize each other's personnel and technical capabilities to further enhance our emergency preparedness and response capabilities." The MARS program consists of licensed Amateur Radio operators who are interested in military communications on a local, national and international basis as an adjunct to normal communications. MARS has a long and proud history of providing worldwide auxiliary emergency communications during times of need. The combined three service MARS programs (Army, Air Force, and Navy-Marine Corps) volunteer force of more than 5000 dedicated and skilled Amateur Radio operators is the backbone of the MARS program. There are Army MARS stations in Japan, Korea, Hawaii, Panama, the Virgin Islands, Puerto Rico, Alaska, Central America, Africa, Germany and the continental United States. MARS responders

operate on specially assigned military radio frequencies in voice, teletype and packet modes of communications.

* North Carolina Ham Celebrates 100th Birthday: Harry Mills, K4HU, of Hendersonville, North Carolina, celebrated his 100th birthday September 19. In 1922, when Mills was first licensed, there was no Federal Communications Commission; communications were regulated under the Department of Commerce with Herbert Hoover as Secretary of Commerce. Mills has been a member of the League since February 1, 1936 - more than 71 years; he is also a member of QCWA. Still active on the air, Mills can be heard twice weekly checking into the AM net on 3810 kHz, as well as the Chapter 76 QCWA SSB net on Saturday mornings on 3930 kHz. Mills credits a crystal receiver project from the Boy Scout handbook in 1919 for his interest in wireless and radio. ARRL Membership Manager Katie Breen, W1KRB, passed along birthday wishes: "On behalf of the Board, Staff and 152,000 members of ARRL -- we all wish a hearty Happy Birthday to Harry, K4HU. It's not too often that we have the opportunity to wish a Happy Birthday to someone who has been a member for 71 years -- yes, 71 years! I knew when I started here that we have thousands of dedicated members, but Harry exemplifies our long-time members. We are so pleased for Harry and wish him a very Happy 100th Birthday." -- Tnx John Dilks, K2TQN, and Harold Kinley, WA4GIB

* L. B. Cebik, W4RNL, Wins August QST Cover Plaque Award: The winner of the QST Cover Plaque Award for August is L. B. Cebik, W4RNL, for his article "A Short Boom, Wideband 3 Element Yagi for 6 Meters." Congratulations, L. B.! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the September issue by Sunday, September 30.

* Hams Named to Key NASA Positions: Veteran astronaut Ellen Ochoa, KB5TZZ, has been named Deputy Director of NASA's Johnson Space Center. Ochoa has served as Director of Flight Crew Operations at Johnson. She will succeed Bob Cabana, KC5HBV, who was named Director of NASA's Stennis Space Center in Mississippi. Ochoa and Cabana have each flown in space four times. Ochoa flew on space shuttle missions STS-56 on Discovery in 1993, STS-66 on Atlantis in 1994, STS-96 on Discovery in 1999 and STS-110 on Atlantis in 2002, logging a total of 978 hours in space. She became Deputy Director of Flight Crew Operations at Johnson in December 2002 and Director of Flight Crew Operations in September 2006. Cabana has logged more than 1010 hours in space. He served as pilot on STS-41 in 1990 and STS-53 in 1992, both on Discovery. He was mission commander on STS-65 on Columbia in 1994 and STS-88 on Endeavour in 1998, the first International Space Station assembly mission. "Having friends in high places is always a good thing," said ARRL ARISS Program Manager Rosalie White, K1STO. "It is a great thing for the Amateur Radio on the International Space Station program to have Ellen and Bob in these high-level positions at important NASA facilities. They are familiar with Shuttle Amateur Radio Experiment (SAREX) and ARISS;

recalling good experiences the two programs have provided students over the years can be very helpful to the future of Amateur Radio in space."

* Oklahoma Hams Assist with Accident Scene: On September 8, Myrna Cobb, KE5IAD, of Bethany, Oklahoma, and Victor Stillman, KE5LQU, of Edmond, Oklahoma, were driving home from an ARES exercise and talking with friends on the K5EOK EARS repeater in Edmond. As they were talking, a car about 150 yards ahead of them on the highway started hydroplaning. The car skidded into a tractor-trailer, causing caused both vehicles to wreck. Still on the radio, Cobb and Stillman told Frankie Tassone, KE5KQL, about the accident, giving him the accident details. Tassone then contacted the Oklahoma Highway Patrol. Cobb and Stillman were able to immediately respond when they pulled up on the scene. Stillman, a volunteer fire fighter and EMT, supplied first aid to the victims while Cobb directed traffic, keeping the scene clear for more than 20 minutes before the Highway Patrol arrived. - Tnx Mark D. Conklin, N7XYO

* Dayton ARA Looking to Honor Silent Keys: If you know of a ham who has died in service during the conflicts in Afghanistan or Iraq, the Dayton Amateur Radio Association would like to honor them. DARA is looking to publish a memorial page in the Hamvention 2008 program listing these SKs, with their name, call sign, branch of service, rank and unit. For more information, please contact Ed Collins, N8NUY <n8nuy@arrl.net>.

* Let Us Know What You Think: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA,
k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>
==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

1565. Welcome to rec.radio.info!

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

More information about kill files may be obtained from Dave Fawthrop's | Killfile FAQ at: |

http://www.hyphenologist.co.uk/killfile/ |

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 23 SEPTEMBER 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

Your news reader this morning is Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEYS

It is with deep regret that we have to announce the passing of two radio amateurs recently.

George Cooke, ZS1JD, on 5 September due to heart failure in the age of 81 years. Our deepest sympathy is extended to his life partner Aileen and family and his many friends.

Jock Perrett, ZS1ZI, went silent key on Thursday 13th September 2007. Also to his relatives and friends, our deepest sympathy.

(PAUSE)

In the news today:

TAKE YOUR HAND-HELD TO WORK

REVISION OF THE SARL STUDY GUIDE

DISCUSSION ON BACAR INCLUDED IN SA AMSAT SPACE SYMPOSIUM

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

TAKE YOUR HAND-HELD TO WORK ON OCTOBER 5

Friday 5 October 2007 is the SARL National Take Your Hand-held to Work Day. The objective of the event is to create public awareness for amateur radio and the technology that it embraces.

Many repeaters will be linked through IRLP, the Internet Radio Linking Project, to create activity across the country. At this stage the following areas will be included: Pretoria, Johannesburg, Sandton, Kempton Park, Middelburg Mpumalanga; Nelspruit/White River, Durban, Harrismith and Cape Town.

IRLP is a reliably and inexpensively linking amateur radio system without the use of RF links, leased lines, or satellites. The IRLP uses Voice-Over-IP (VoIP) custom software and hardware. Coupled with the power of the Internet, IRLP links repeater sites or simplex stations to the world in a simple and cost effective way. IRLP operates a worldwide network of dedicated servers and nodes, offering very stable worldwide voice communications between hundreds of towns and cities.

If you are not at work on 5 October or are retired, come on the air and share your experiences with other radio amateurs talking from work.

RTA PRESENTATIONS NOW AVAILABLE ON THE WEB

The first of the presentations made at the SARL Radio Technology in Action days are now available on the web. The presentations are in PDF format and can be downloaded for printing or viewing on screen. Visit the RTA section of the web regularly as presentations will be added over the next two weeks. The URL is www.sarl.org.za, click on activity and then on RTA.

REVISION OF THE SARL STUDY GUIDE

The SARL is in the process of making some corrections to the SARL Radio Examination Study Guide. The objective of the edit process is to update details about the license conditions, spelling corrections and the inclusion of a section on digital communications.

Lecturers are invited to send in their comments and any changes they would like to be considered in the revised edition to be made available on the SARL web by the end of this year. Before making your input, please acquaint yourself with the HAREC syllabus available on the web.

Please send comments to Colin de Villiers with Study Guide in the subject line. Your input will be acknowledged and forwarded to the editing team. Colin's email address is devilc@mweb.co.za. The closing date for comments is 30 September 2007.

DISCUSSION ON BACAR INCLUDED IN SA AMSAT SPACE SYMPOSIUM

A discussion on the re-introduction of the BACAR project will feature on the SA AMSAT Space Symposium Agenda. The symposium will be held on Saturday 6 October at the SARL National Amateur Radio Centre. BACAR is the acronym for Balloon Carrying Amateur Radio, a project that resulted in great fun and excitement some years back. A BACAR project is planned for early next year.

There are many other presentations and discussions of interest. Book now by completing the registration form available on www.amsatsa.org.za. The registration fee includes refreshments and lunch.

SARL/HMO BEACON PROJECT TO THE DISCUSSED AT NEXT INTECNET

The next Intecnet will be held on Sunday 7 October starting at 20:00 CAT. Dr Lee-Anne McKinnell, ZS2LAW, and John Willescroft, ZS6EF, will discuss the ins and outs of the SARL/HMO beacon project to be going live soon. They will focus on the design of the beacons and some of the research aspects. Learn how you can contribute to propagation research. A PowerPoint presentation will be used during the Intecnet. The presentation will be available on the SARL Web later this week.

CONTEST NEWS

SARL 40 metre Mobile Competition.

The results of this competition that took place on 12 August are as follows:

1st Gerhard, ZS3TG - 438 points; 2nd Deon, ZS1AFU - 197 points; 3rd Koos, ZS1KWV - 181 points; 4th Paul, ZS6PR - 141 points; 5th Jan, ZS4JAN - 111 points.

A check log was received from Eddie, ZS6BNE.

SARL HF CW Contest.

The committee received seven logs for this contest. The results are as follows:

1st Allan, ZS1AAX and Vidi, ZS1EL with 64 points each; 2nd Hans, ZS6KR and Ed, ZS6UT with 60 points each; 3rd Jan, ZS4JAN with 58 points; 4th Gary, ZS5NK with 50 points; 5th West Rand ARC with 36 points.

In the Club competition for CW, Pretoria ARC takes first place with 120 points, followed by the Cape Town ARS and Overberg ARC with 64 points each, Bloemfontein RAC with 58 points, Highway ARC with 50 points and the West Rand ARC with 36 points.

The complete set of results have been published in HF Happenings 268.

SARL VHF/UHF Contest. Please make a note of the correct address for your log submission. By e-mail send it to zs6pjb@gmail.com and for snail mail use PO Box 4452, White River, 1240. DO NOT USE the address in the 2007 Contest Manual.

SARL CONTEST MANUAL

The SARL Contest Manual must be reviewed for use during 2008. The contest manager is awaiting comments and suggestions from members and clubs on the various contests as well as suggestions for any new contests to be included. This is for SARL as well as Club contests. Maybe some provincial QSO Parties, and more VHF sprints.

Send your suggestions and comments to hfcontests@netactive.co.za by 20 October 2007.

SAATI AGM

The Annual General Meeting of SAATI will take place on Saturday 6 October at 14:00 CAT in the club house of the Centurion Amateur Radio Club at the corner of Duncan and Prospect Streets, Pretoria. All are welcome and the meeting will be followed by a bring-and-braai for which SAATI will provide the consumeable RF.

PROPAGATION CONDITIONS

Hannes Coetzee, ZS6BZP, being away for two weeks, the following was submitted by Hans, ZS6AKV.

The current geomagnetic conditions are unsettled. A coronal hole on the solar disk is rotating into a geo-effective position which means that HF conditions can be disturbed.

Current predictions show an interesting tendency with late afternoon and early evening openings to Europe on 10, 15 and 20 metres. Australia seems to come into focus around 06:00 CAT when openings on 20 metres look promising. Around 20:00 openings can be expected on 40 metres but as that is in the middle of the night in most of Australia one will only find the most dedicated Dxer around.

>From around 14:00 the 20 metre band is likely to open towards India. The USA West Coast may provide some interesting DX opportunities from around 14:00 on 20 m and an hour or two later on 15 metres.

Amateur Radio Mirror International received some interesting shortwave listener reports on the 10:00 transmission on 17 590 kHz with good signals into Israel and Italy. Mind you the transmitter used runs 250 kW, but with the antenna favouring Africa.

The HF bands are at variable at the best of times. When you get an opportunity, call CQ DX, you may never know, the person on the other side of the world may just be listening. If we all just listen, we will never know if the bands are opening. For more predictions visit www.spacewaether.co.za.

DIARY OF EVENTS

23 September, today till 12:00 - Last opportunity to still score or give points away in the VHF/UHF contest; 29 September - Ladies Only ZU RAE course by Kempton Park RATS; 29 September - Pretoria ARC Flea Market and AGM; 30 September - Last day for comments on SARL study guide; 4 - 10 October - Special space programme; 5 October - Take your handheld to work day; 6 October - SA AMSAT Space Conference; 6 October East Rand Flea market and AGM; 6 October - SAATI AGM; 7 October - Intechnet; 18 October - Class A RAE; 20 October - Comments on SARL 2008 Competition Handbook to be in.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by George, ZS6NE, and transmitted by (your name and call sign).

Thank you for listening. 73.

/EX

1 GB2RS NEWS Sunday 23 September

The news headlines

* RAYNET on hand to help plane crash

* Nominations sought for G5RP Trophy

* 50th JOTA draws closer

South Sussex RAYNET group were on hand to help when a plane crashed at the Shoreham Airshow. Each year an emergency plan is rehearsed and refined, in the hope that it will never be needed. However on the weekend 15 and 16 September that practice paid off. On the Saturday a Hurricane nose dived into the ground, killing its pilot instantly. The incident happened off-field, and no one else was involved.

Two members of the team who witnessed the incident informed Control, who put everyone on high alert. The emergency channel sprang into use. The pre-prepared messages and procedure for Incident Off Field was broadcast, and acknowledgments sought from all on that net. This resulted in all access and departure gates being closed, all senior safety and administrative personnel being briefed, the PA Caravan being informed, and members of the public kept aware of the situation. Shortly after the accident, Spitfires flew a 'man missing' flypast in tribute to the downed pilot.

Time is running out to nominate for the G5RP Trophy. The trophy is an annual award to encourage newcomers to HF DXing. The award is not limited to youngsters or the newly-licensed; the HF DX bug can bite at any age or after many years of experience on other bands. If you are an established HF DXer and want to recommend someone to be awarded the G5RP Trophy for 2007, now is the time to send in your nomination. Your nominee should be an up and coming HF DXer who has made rapid progress in the last year and has some real achievements to show. Examples include a good total of new countries worked or some serious HF DXpedition activity.

This prestigious award will be presented this year at the RSGB's HFC 2007 Convention on 12 to 14 October. Send your nomination to John Gould, G3WKL, QTHR or by e-mail to g3wkl@btinternet.com, to arrive no later than Friday 28 September.

The 50th anniversary of Scouting's Jamboree on the Air is scheduled for 20 and 21 October. JOTA is the largest official scouting event in the world, with an expected 500,000 participants. Open to both boy and girl

Scouts, it is one of the few joint events between the two organisations, and one which attracts international sponsorship.

An example of a station activated for JOTA is GB50TYN. This will be operated by the Tynemouth Amateur Radio Club at the 3rd Tynemouth Scout Headquarters. The station will be operational on HF and 2m using CW, SSB and PSK. For more information on your nearest station log onto www.scout.org/jota/.

The RSGB's Train the Trainers scheme is to run again. The course continues to help tutors enhance the standard of their Foundation, Intermediate and Advanced licence courses. Alan Betts, G0HIQ and Brian Reay, G8OSN, will be presenting the course, which is free of charge to Instructors. The all day event takes place on Sunday 21 October in Motherwell.

2 For more information, and to register, contact RSGB Region 1 Manager Gordon Hunter, GM3ULP, on gm3ulp@aol.com or 01698 253394. Demand is expected to be high, so it is important to register as soon as possible.

The RSGB is offering those wishing to obtain a UK Amateur Radio Licence the opportunity to complete one, or more, of the required examinations over the weekend of the HF Convention, 12 to 14 October. Candidates must book their examinations prior to the event and must provide evidence they have completed the required practical assessments. There will be limited facilities to complete assessments at the HFC subject to arrangement. For further information and for booking examinations contact Susan Lloyd on susan.lloyd@rsgb.org.uk, or via the RSGB HQ switchboard on 0870 904 7373.

Candidates for the Foundation and Intermediate exams must contact Brian Reay, G8OSN, at ardc.chairman@rsgb.org.uk. In order for their progress on practical assessments to be verified. If required, Brian can also advise on finding a local tutor to complete practical assessments in advance of the HFC or the provision of assessment facilities at the HFC.

GB75PW will be on the air on 7MHz from the Practical Wireless offices in Broadstone, Dorset. The station will be active from 1300 to 1600 on Monday 24 September. The team will be marking the 75th anniversary of Practical Wireless magazine.

The British Amateur Teledata Group, BARTG, has undergone some changes recently. The group now has a new website www.bartg.org.uk which offers extra facilities and a new look for BARTG's magazine, Datacom.

And now for the details of rallies and events for the coming week [Note to newsreaders: Please use your judgement on which of the 23 September items to read out, based on your time slot and distance from the event.] On 23 September the British Wireless for the Blind Fund will be holding Transmission 2007. For more information contact Lesley on 01634 832 501 or e-mail lesley@blind.org.uk. On 23 September the Hornsea

Amateur Radio Club Rally takes place at Floral Hall in East Yorkshire. On 29 September the Rochdale and District Amateur Radio Society Rally takes place at St Vincent's Church Hall, Cutgate in Rochdale from 1030. For more details contact Dave, G0PUD, on 01706 632502 or email dave.shaw@zen.co.uk. On 30 September Telford Hamfest is being run again at Enginuity Museum, Coalbrookdale, Telford. Doors open at 1000. For more information contact Martyn, G3UKV, on 01952 255416, or email ukv@ukv.me.uk. The usual traders will be in attendance and there'll be the usual bring & buy stall. Space will be available outside. More details of this and future events can be found on pages 88 and 89 of the September edition of RadCom.

3 Now for the news of special events John Howard, G0BUV, will be operating special event call sign GB8CMC from Birmingham until 9 October. The event is celebrating the 800th anniversary of the Coleshill Market Charter. The Charter was awarded by King John on the 26 August 1207 on Church Hill in Coleshill, Warwickshire. The Border Amateur Radio Society is planning a special event using call signs GS0BRS and GX0BRS until 29 December. Club activity will be on HF and VHF. For club members both north and south of the border a special QSL will be available. For more details contact Ray Evans, GM0CDV, on 01573 228 730. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Chris, DL2MDU, will be active as 5Z4/DL2MDU from Kenya until 24 September. He plans to operate holiday style, mainly CW. QSL via bureau to home call. The last Fouga Magister aircraft still in use by the Belgian Air Force will perform its final flight on 27 September. To mark the event, the Belgian Air Force Amateur Radio Association will be active on all bands and modes as ON47FOUGA on 24 to 30 September. QSL via ON6KN, direct or bureau. Heinz, DF6ZY, will be active as TK/DF6ZY from Corsica (EU-014) until 28 September. He plans to operate on 10 to 80 metres mostly RTTY SSB and SSTV on request. QSL via home call, direct or bureau. Bernd, DL8AAV, will be active as OZ/DL8AAV/p from Laeso Island (EU-088) until 29 September. QSL via home call, direct or bureau. Lutz, DL3ARK, and Peter, DL4AMK, will be active as OZ/homecall from Hov Lighthouse on Langeland Island until 29 September. OZ/DL3ARK will be QRV in the Scandinavian Activity Contest, SSB. QSL via homecalls, direct or bureau. Drew, GM3YOR, will operate holiday style and CW only as SV5/GM3YOR from Symi, Dodecanese Islands (EU-001) until 29 September. A large group of Dutch amateurs will be going to Qawra, Malta (EU-023) for their 20th holiday DXpedition. They will operate on 80 to 6 metres CW, SSB and digital modes until 30 September using special callsign 9H20. QSL via PB9ZR. Now the contest news The CQ WW RTTY Contest takes place from 0000 on 29 September to 2359 on 30 September on the 3.5 to 28MHz. The exchange takes the form of RS and CQ Zone. The Ireland Calling CQ IR Contest takes place from 1200 on 29 September to 1200 on 30 September on the 3.5 to 28MHz bands, CW/SSB mode. The RSGB 50MHz activity evening takes place on 25 September from 2000 to 2230 local on all modes. The exchange takes the form of RST, serial number and locator. The Irish Radio Transmitters Society's 75th

Anniversary Contest CQIR will take place at 1200 UTC on 29 September.

4 Now the solar factual data for the period from 10 September to 16 September, compiled by Neil Clarke, G0CAS This was the quietest week so far for this minimum with no events happing at all. Solar activity was very low. No solar flares or even sub flares took place. Solar flux levels varied between 66 and 68 units. That's what to expect at sunspot minimum. The average was 67 units. The 90 day solar flux average on the 16th was 70 units, that's the same level as last week. X-ray flux levels remained well below the minimum level. Even geomagnetic activity was very quiet. On the 10th to the 13th the Ap index was only 2 units. Even though a coronal hole disturbance arrived on the 14th and last through to the next day. The impact was very weak and the Ap index on both days was only 4 units. The average was Ap 3 units. The ACE spacecraft saw solar wind speeds decline to only 255 kilometres per second. Wind speeds at that speed are very rare. However, speeds increased to 440 by the 15th. Particle densities were low throughout. Bz varied between minus 1 and plus 5 nanoTeslas on the quiet days and between minus 8 and plus 9 nanoTeslas during the weak coronal hole disturbance. And finally the solar forecast. This week the slightly more active side of the Sun is expected to be looking our way. However, solar activity should continue at very low levels. Solar flux levels are expected to remain around the 70 mark. Geomagnetic activity should start at quiet levels but on Thursday the effects from a recurring coronal hole should arrive. This disturbance should last till the weekend. MUFs during daylight hours at equal latitudes should be around 20MHz for the south and 17MHz for the north. The darkness hour lows should be about 8MHz. Paths this week to India should have a maximum usable frequency with a 50 per cent success rate of around 22MHz. The optimum working frequency with a 90 per cent success rate will be about 17MHz. The best time to try this path will be between 0900 and 1500 hours UTC. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 23 September Southdown Amateur Radio Society is operating G1KAR at Beachy Head. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Monday 24 September Basingstoke Amateur Radio Club Club Night. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 24 September Felixstowe and District Amateur Radio Society is having a Thai cookery evening with Paul G4YQC. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Tuesday 25 September Horndean and District Amateur Radio Club is having a talk by Commander Bruce Nicolls, OBE, RN (retired) on the history of flag signaling. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Wednesday 26 September Chesham and District Amateur Radio Society is on the air. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 26 September Dover Radio Club is having a presentation on local broadcast radio by Matt, M1CMN. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 26 September Fareham and District Amateur Radio Club is having a talk on a 160m QRP transmitter by Steve, G7HEP. Contact Jim, M1JJN.

On Wednesday 26 September Havering and District Amateur Radio Club is having a data on the air evening. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 26 September Newbury and District Amateur Radio Society is having a talk on QRP by Ray, G4FON. Contact Richard, G3ZGC, on 01635 46241, richard.jolliffe@vodafone.com.

On Wednesday 26 September Norfolk Amateur Radio Club is having a Bright Sparks evening, designing QSL cards. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 26 September Verulam Radio Club is enrolling candidates for the Foundation Course at Verulam School. Contact Norman, G8ATO, on 07773 628 912.

On Wednesday 26 September Worthing and District Amateur Radio Club is having a technical discussion on PME earthing by M0KEL. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 27 September Echelford Amateur Radio Society is having a talk on the history of maritime radio by Olof Lundberg, G0CKV. Contact John Osborne, G4GSC, on 015784 451898.

On Thursday 27 September Reading and District Amateur Radio Club is having a talk on direct digital synthesisers by Mike Naylor, G4CDF. Contact Pete, G8FRC, on 01189 695 697, or on the web at www.radarc.org.

6 On Thursday 27 September Shefford and District Amateur Radio Society is having a talk by Terry, G4JXD. Contact David, G8UOD, on 01234 742 757.

On Friday 28 September Itchen Valley Amateur Radio Club is having a talk on Ham Radio Deluxe by John, G8IOK. Contact Liz, M0ACL, on 02380

254599.

On Friday 28 September Loughton and Epping Forest Amateur Radio Society is having a visit by Phillip Brooks, G4NZQ. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

On Friday 28 September Mid-Sussex Amateur Radio Society is having a skittles evening at the Royal Oak, Barcombe. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 28 September Wimbledon and District Amateur Radio Society is having a slide show on Canada by Jim, M0CON. Contact Jim, M0CON, on 020 8874 7456.

SE On Saturday 29 September Basingstoke Amateur Radio Club is having a foxhunt weekend in the New Forest. Contact Frank, M0AEU, by email to barc@2lo.info.

On Saturday 29 September Gorleston Amateur Radio Society is having a club lunch at the Short Blue Public House. Contact David, G3OEP, on QTHR, 01493 662 323.

NEWS FOR THE SOUTH-WEST On Wednesday 26 September South Bristol Amateur Radio Club is having an on the air evening. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 26 September Taunton and District Amateur Radio Club is operating the club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 26 September Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Friday 28 September Guernsey Amateur Radio Society is having a talk by GU6EFB entitled "What is WSJT?" Contact Phil, GU0SUP.

NEWS FOR THE MIDLANDS A vacancy has arisen for a Deputy Regional Manager covering South Derbyshire & South Nottinghamshire. If you live in the area and would like to help the RSGB's Regional Team to strengthen relationships between the Society and its membership, please contact Regional Manager Jim Stevenson, G0EJQ, on 0789 172 1081 or by email to g0ejq@rsgb.org.uk.

On Monday 24 September South Normanton, Alfreton and District Amateur Radio Club will be enrolling candidates for their intermediate and advanced licence courses. Enrolment will be at 7pm on 24 September at the Village Hall Community Centre, Market Street, South Normanton, DE55 2EJ. The advanced licence course commences on Tuesday 2nd October and the intermediate course commences on Wednesday 3rd October. For further details contact Russell Bradley, G0OKD, on 01773 783658 or email russell.bradleyg0okd@ntlworld.com.. Contact Russell, G0OKD, on 01773 783 658, russell.bradleyg0okd@ntlworld.com.

On Monday 24 September Gloucester Amateur Radio and Electronics Society is having a home construction bring and show evening. Contact Anne, 2E1GKY, on 01452 548478, daytime.

7 On Monday 24 September Stratford Upon Avon District Radio Society is having a talk on software defined receivers. Contact Jack, G3VYE, on 01926 641 988.

On Tuesday 25 September Derby and District Amateur Radio Society is on the air. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 25 September Loughborough and District Amateur Radio is having a night on the air. Contact Chris, G1ETZ, on 01509 504 319.

On Wednesday 26 September Telford and District Amateur Radio Society is having a talk on how to make decent omelettes. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 27 September Coventry Amateur Radio Society is having a quiz night. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Thursday 27 September Salop Amateur Radio Society is working on the 2007 SARS construction project. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 28 September Hucknall Rolls-Royce Amateur Radio Club is having an internal quiz night. Details on the web at www.hrrarc.com.

On Sunday 30 September Wythall Radio Club is taking part in Lord Pettitt's shooting competition. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

NEWS FOR THE NORTH OF ENGLAND

On Monday 24 September Sheffield Amateur Radio Club is having a quiz night. Contact Trevor, M0TWS. On Monday 24 September South Manchester Radio and Computer Club is having its monthly technical forum. Contact Ron, on 0161 969 3999.

On Monday 24 September Thornton Cleveleys Amateur Radio Society is having part two of Dr A G Llewellyn's talk on radar. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 25 September Chester and District Radio Society is having a presentation on the International Short Wave League by Geoff Hoyles. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Tuesday 25 September Pontefract District Amateur Radio Society is putting G3FYQ on the air from the club shack. Contact Colin, G0NQE, on 01977 677 006, info@pontefractradioclub.org.

On Tuesday 25 September Wakefield and District Amateur Radio Society is having a talk on Morse with Dave, G4CLI. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Wednesday 26 September Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 26 September Mid-Cheshire Amateur Radio Society is holding its AGM. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Thursday 27 September York Radio Club is having a talk and DVD on UFOs over Selby by M3UEO. Contact Peter, M1EHD, on 01904 769 509.

On Friday 28 September South Manchester Radio and Computer Club is having a talk on "PIC chip projects" by Ken, G4TZT. Contact Ron, on 0161 969 3999.

8 On Friday 28 September Tynemouth Radio Club is having an operating and Morse night. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 29 September Wakefield and District Amateur Radio Society is running its Foundation Licence course. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

NEWS FOR SCOTLAND

On Monday 24 September Lothians Radio Society is having a talk on getting started on 9cm and 13cm by Peter Bates, GM4BYF. Contact Toby, MM0TSS, on 07739 742 367, or by email to enquiries@lothiansradiosociety.com, or on the web at www.lothiansradiosociety.com.

On Thursday 27 September Aberdeen Amateur Radio Society is on the air and having Morse practice. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Friday 28 September Banff and Buchan Amateur Radio Club is having an on the air night. Contact geraldbrt@aol.com.

On Friday 28 September Cockenzie and Port Seton Amateur Radio Club is having its second 144MHz DF hunt, meeting in "The Old Ship Inn" car park. Contact Bob, GM4UYZ, on 01875 811 723.

On Friday 28 September West of Scotland Amateur Radio Society is having a radio testing evening, with Sam, GM4BGS, demonstrating how to test PMR and amateur radio equipment. Details on the web at www.wosars.org.

NEWS FOR WALES No news items have been received for Wales this week.
NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday September 23rd 2007

CQIR

CQIR is just a week away and preparations are well in hand for the event. A large station is being assembled for the Press in the Phoenix Park and EI75IRTS will be QRV before and during the contest promoting the event worldwide. Low frequency operation for EI75IRTS will be from the EI7M site in Cork which will ensure a great signal on those bands. We would again encourage all EIs and GIs to make a big effort to get on the bands for what promises to be a great celebration of Ireland and the Irish wherever they may be throughout the world.

Dont forget that the first Irish entry pulled from the draw will win a long weekend for two in New York City, all expenses paid. You get a free entry for every 75 qsos made in the contest. Prizes are fully sponsored at no cost to the Society. This is a showcase event for the Society and, as always, good operating practice, friendliness and courtesy to other users of the spectrum should be the order of the day.

EI0MAR

EI0MAR will be QRV on Saturday and Sunday the 29th and 30th of September for the CQIR event. On Saturday the station will be active between 1100 and 2200 UTC and also on the following morning. On Saturday evening, the North Dublin Radio Club's weekly meeting will take place at the station. The vintage radio museum in Howth, which houses EI0MAR, is located in the Martello tower in Howth. Access is up a steep pathway opposite the Abbey Tavern. Visitors are welcome and may operate the station using their own or the club's call sign.

Further information on EI0MAR is available on the club's website. This is easily found by googling the words EI0MAR, Martello and Howth. A link to the museum

web page will allow downloading of a free 22-page booklet about the tower and the history of wireless.

Logs

Logs for EI75IRTS activity on CW and SSB are required by the QSL Manager, Denis, EI6HB immediately. There are a lot of direct QSL cards after arriving and QSO details must be checked before confirmation is sent out. Logs (preferably in ADIF format) should be sent to ei6hb at eircom dot net.

All who participated in the 2 metre counties contest, even those who gave out just a few points, are encouraged to send in their logs to the Contest Manager. The latest date for log entry is this Tuesday, the 25th of September.

Cork Radio Club

At the recent Annual General Meeting of the Cork Radio Club the following were committe was elected: Con EI7DJB Cathaoirleach; Dick EI6HH Cuntasoir; Frank EI6EVB Runai; John EI8HS, Vincent EI7HN, Finbarr EI1CS and Tony EI9ID.

Kerry Amateur Radio Group

The Kerry Amateur Radio Group will hold its annual general meeting on Saturday the 6th of October 2007 at 10 a.m. in the Muckross House Coffee Shop, Killarney. The annual election of officers will take place, and the following incumbents have been nominated: Ron Hahn, EI2JP, Chairman & Treasurer, John Costello, EI9ESB, Vice Chairman Billy O'Connor, EI7CQB, Hon. Secretary.

Ballots will be posted to all current members during the week of the 17th of September 2007. These must be received by the Board on or before the start of the AGM. After the AGM, there will be a more general disussion regarding the Group's activities and direction for 2007/2008. All members are requested to attend, and new members are always welcome.

DXpedition to St Brandon

The 3B7C DXpedition, operating from the Saint Brandon Rocks in the Indian Ocean, is still underway. By Wednesday last, the group had made more than 93,000

QSOs. CW continues to be the dominant mode, accounting for nearly 60% of QSOs to date.

160 metres has been the most difficult band for the group, partly due to the high level of atmospheric noise in the area in which the group is operating. Just 2% of QSOs to date have been on 160 metres. As regards modes, in addition to CW and phone, RTTY was also heard from Saint Brandon during the week. The group is not planning to use data modes other than RTTY.

As of Wednesday, there were 58 EI call signs in the log. Nicky EI9JF, who has worked them on 15 band/mode slots, is top of the list, followed closely by EI7BA, EI2JD, EI9FBB, EI3IO and EI4CF. The majority of QSOs with EI have been on 15, 17 and 20 metres. At the time of writing, there we 48 GI calls in the log, led by GI3OQR, GI4VIV and GI0KVQ.

The DXpedition finishes on Monday the 24th of September.

Short Range Devices (SRDs) on 10 GHz

ComReg is proposing to open the segment 10.4 to 10.42 GHz to licence-exempt Short Range Devices or SRDs. These will be mainly for movement detection in the context of traffic control and will have a power level of 500 milliwatts. There is an experimenter secondary allocation at 10.0 to 10.5 GHz. The EU notification procedure and the standstill period for observations means that a final position on this will not be adopted until early October at the soonest. The relevant document is ComReg 07/37 and is available on the ComReg website at www.comreg.ie. Any experimenter having concerns about this proposal can write to Jim Connolly at ComReg.

Winlink and APRS

John, EI7IG, is experimenting/testing a Winlink Telpac Node in the Waterford area. The frequency in use is 439.875 MHz and the callsign is EI3RCW-10. If anyone is interested in participating, please contact him directly at 086-8167310

Experiments in APRS are ongoing around the southeast on two metres using 144.800 MHz. A number of experimental digipeaters and Igates are in operation. The WX station EI2WRC is also using this frequency. For more

information on APRS visit www.aprs.org.

Limerick Radio Club

The next meeting of Limerick Radio Club will take place on Thursday the 11th of October at the usual venue, the Limerick Institute of Technology, Moylish at 19:30 hrs local time. All those interested are welcome to attend.

Marconi Clifden Celebrations

On the 17th of October 1907 Guglielmo Marconi sent his first commercial message from the then new station at Clifden, Ireland. This October in celebration of this historic event members of the Galway Radio Experimenters Club will be running a special event station from Saturday 13th to Wednesday 17th from Clifden. The club has been issued the call sign EI100MFT for the event, MFT been the last call sign used on the original station.

On the Wednesday they will be making a special linkup with the Marconi sister station in Glace Bay, Nova Scotia. Part of this linkup will be an exchange of greetings between President Mary McAleese and Lieutenant Governor of Nova Scotia the Honourable Mayann E. Francis. The group will also be honoured to have Princess Electra Marconi present as she is coming to Clifden for the festival along with an Exhibit from the Marconi Foundation in Bologna. The Galway Radio Experimenters Club will also be presenting a display of vintage equipment. More details on the festival can be found at www.clifden.ie. Visitors to the station are more than welcome and if you would like to participate this can also be arranged. For further information please contact Enda Broderick (II2II) on 086-8676410 or email: &#65533;enda dot Broderick at lightnet dot ie&#65533;.

Waterford Rally

The Waterford Radio and Electronics Rally will take place on Sunday the 21st of October at the Woodlands Hotel on the Dunmore Road in Waterford. South East Communications and Long Communications will be at the rally. The IRTS, AREN and a bring-and-buy stand will also feature.

Doors open at 11 a.m. and admission is 5 Euro, accompanied children are admitted free of charge. For

details including a directions map, visit the South Eastern Amateur Radio Group web site on www.searg.com.

Upcoming Rallies

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to news at irts dot ie for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday's bulletin.

I think that this is interesting, but have to say that I'm not sure just what this means. Are some repeaters treated as something else?

At first blush, it would seem that a repeater should always be treated as a repeater.

VE7UQ IS NEW MANAGER FOR INCOMING QSL BUREAU FOR BC

After 19 years of service, Dennis Livesey VE7DK has retired as BC Incoming
QSL manager. RAC BC/YT Director Ed Frazer VE7EF thanked Dennis for his many
years of QSL service to BC hams, and took on the task of finding a new
Bureau manager.

Taking over on September 24, 2007 as the Incoming QSL Bureau manager for BC
is Ken Clarke VE7UQ. Ken plans a team approach to speed the flow of QSL
cards, and will create a website to permit easy checking of user credits and
cards waiting. The new address for the Bureau is:

VE7-VA7 Incoming QSL Bureau
Ken Clarke VE7UQ
12441 - 58A Avenue, Surrey BC V3X 1X6
604-596-8786
ve7uq at shaw.ca

Receiving his Amateur licence in 1983, Ken's main interests are contesting
and DX, a DXCC member with 200 countries confirmed. He is a member of RAC,
ARRL, BC DX Club, and the Surrey Amateur Radio Club.

1572. Re: Suggestion for an HF starter rig

Newsgroup: rec.radio.amateur.moderated
Date: 2007-09-24 17:46:36 UTC
From: Michael Coslo <mjc5@psu.edu>
Message-ID: <fd8or9fim1@f04n12.cac.psu.edu>
Source record: 3877

Hi Jim,

While most rigs these days are at least "pretty good", I would put out a shameless plug for a rig like the Kennwood TS-830.

I had the chance to go over one of those old beauties recently, and found it a sweet radio indeed. It has tube finals, and a very nice receiver. It has the Kenwood sound to boot. Lots of knobs if you are a tweaker. These can be found in the 3-400 dollar range.

Other radios I've had the chance to evaluate are the:

IC-761. A high quality radio. It is a big one though. But I like large radios.

IC-745. Second Generation synthesized Rig. Pretty good one. Smaller radio for the day. You could go mobile with this one.

IC-756 Pro - A fair radio. The Pro II is better, but probably priced outside your range.

I might suggest picking up a tuner such as one of the MFJ 300 watt ones. Then get ladder line, and throw a general purpose dipole in your trees. That for my money is the best starter antenna going, and can service you long after you're a newbie. Some do not like to have to tune the antenna, but I can say that It is possible to contest with such a setup.

Finally, look around and be patient, better deals come to the patient.

From 5.5 years ago......

My first setup was:

IC-745 - $250.00 used

MFJ 949 Tuner - $129.00 new

Ladder line - $30.00 new

Antenna wire - $12.00 for a 500 foot reel of #12 THNN

There is $421 dollars and on the air. I don't remember the costs of the nylon rope and misc stuff like end insulaters, but it wasn't much extra.

And of course, you won't find copper at that price, but you can expect to pay 60 or so for 100 feet of ladder line, and whatever outrageoous price for wire these days.

There's been some mention, recently, of the fact that some
coordinating groups have been treating D*Star digital repeaters
differently.

Because of the fact that such repeaters use a packet-based
transmission technology which receives each packet and validates it
before retransmitting it, there are people who feel that such systems
are more like AX.25 "store and forward" packet nodes / digipeaters
than they are like FM-voice repeaters. The fact that D*Star can also
be used to carry some fairly high-bandwidth data seems to contribute
to this feeling, as well.

>At first blush, it would seem that a repeater should always be treated
>as a repeater.

The NFCC seems to have agreed with you (with some amount of dissent).
Since D*Star systems retransmit the packets (digital-voice, or data)
on a different frequency than the one on which they receive, and tend
to keep the transmitter "hot" for as long as there's incoming receive
data, and are being used to carry a lot of voice traffic, it does seem
reasonable to treat them in a way which is analogous to the way in
which FM repeaters are treated.

I think it's even more than a "starter" antenna -- it's great, loads on just about any frequency, and if decently in the clear will work quite well. When I move to a place with the room for a hundred footer up in the trees, it will be the only antenna I'd really ever need for HF. However, I think a ladder-line fed antenna needs a tuner (i.e., transmatch) that has a pretty beefy balun. I had the MFJ-948 that gave me lots of trouble using a 55' long dipole with ladder line. I learned how to make a bigger and better 4:1 toroid balun to replace the dinky one that came with it... then it worked really well. Right, Cecil? ;-)

What are the pros and cons of such a policy? Does it seem like an
attempt to hinder the spread of D-Star or is it more likely to benefit
D-Star?

I am getting the parts together to very soon set up my own semi-long
distance Wi-Fi link.

Ace - WH2T

Also SEE

http://www.wifinetnews.com/archives/006518.html

A team in Venezuela went up a mountain and came down the unofficial holders
of the longest Wi-Fi link record at 167 miles. They used Linksys WRT54G
using open-source firmware (DD-WRT) using retrofitted satellite parabolic
dishes.
When I read this story initially I thought, well they may have used Wi-Fi
protocols, but this isn't Wi-Fi in the sense of regulation-conforming
unlicensed use within the signal limits. The last Wi-Fi distance winner,
Cincinnati teenagers who created a 125-mile link for DefCon's Wi-Fi
Shootout, clearly exceed Part 15 rules, but claim they were using Part 97
(amateur radio) rules. Part 97 ain't regular Wi-Fi.

Well, as I read it, the new policy (if adopted by the FCC) simply puts D*Star repeaters on an equal footing with FM-voice repeaters, in terms of the portions of the band that they can use, and their basic operating rules. It might (depending on interpretation) rule out the operation of such repeaters on those frequencies which are normally assigned in the bandplan for packet systems (nodes and BBSes).

In areas of the country where the 2-meter and 440 repeater frequencies are fully allocated (major metro areas) this might tend to delay the availability of D*Star repeater coverage, as those wishing to set up such a digital-voice repeater would have to contend with other repeater owners for an allocation on any repeater frequency which might become available. Or, I suppose, they could persuade an existing voice repeater to switch over to D*Star operation.

In areas of the country with open repeater slots I doubt it will matter much, and I doubt that it will hinder operation in the 1.2-gig band at all (there isn't much ham activity in those allocations).

Whether this is an "attempt to hinder the spread of D*Star" is a question of motive, and I have no information about the motives of those who voted for the new proposal. It's possible, I suppose... but it's equally possible that some of the voters felt that D*Star proponents were trying to ignore a long-established precedent, and to do an "end run" around the groups which have been chartered to do repeater coordination and prevent (or at least reduce or manage) problems of repeater-induced interference.

So, there's probably politics on all sides, as is usually the case where humans are involved :-)

I have to do a little studying on the D*star protocol here. I didn't know that the packets were validated. I had assumed that it would be similar to say the sort of digital used in audio applications. Bad assumption on my part.

The repeaters would have to be treated very carefully. As I read it, a digital repeater would take up 300 KHZ of space! Yoiks! I would have to think that these repeaters would be coordinated in the same way a regulre one would be. It will take some extra care, given the Bandwidth requirements.

Is that 300 kHz figure for digital voice (DV) or digital data (DD)?
It looks like DD is only offered on 1200 MHz, where that sort of
bandwidth requirement may not be a problem. The brochure for the Icom
ID-800 shows a "Digital transmission speed" of 4.8 kbps and a "Voice
coding speed" of 2.4 kbps (on 2 meters and 440), suggesting that
voice-only data rates will be consistent with data rates typically seen
on the Internet for voice-only streaming audio, such as the radio stream
on Bloomberg.com.

Icom has a band chart (made up by Gordon West) on its web site that shows specific band segments designated for Digital, without further explaining what the word "Digital" means (FM packet, DV or DD). This makes sense, as you wouldn't want to hear squeaking, squalking digital noises as you try to tune along an FM segment with an FM-only rig. My hope is that some underutilized segments of the 440 band (such as the ATV channel that covers 438 to 442) will be reassigned for digital use, repeaters as well as simplex.

That's understandable, but as MOST people understand, time marches on and thing change. The existing band plans are not carved in stone and all parties concerned will need to be realistic about the constant and never ending need for change and flexibility.

"Digital Voice" (a la D-Star) has already been deemed to be "phone" as
the FCC defines it. The designations - right or wrong - are about the
"baseband", not the means used to carry it.

Here in the SF Bay area, that latter suggestion would probably renew a
nasty, bloody band-war :-(

As I understand the history - for quite a few years, there was no ATV
activity hereabouts. A lot of repeater owners made informal use of
the 438 ATV band for auxiliary and control links (reacting to the fact
that the primary 2-meter and 440 allocations around here are very full).

A few years back, an ATV interest group set set up an ATV repeater on
a local mountaintop and lit it up.

The repeater owners howled, asserting that the ATV system was
transmitting on top of ongoing communications without listening first
(a violation of the FCC rules). The ATV group asserted that the
repeater auxiliary links shouldn't have been there in the first place,
as that usage was contrary to the northern California 440 band-plan
which had been in place for years.

I understand that the issue was escalated all the way up to the FCC,
and the FCC declined to make a definitive ruling, stating that it was
really an issue for the local-area frequency coordinators to deal
with... and the coordinators came down on the side of the agreed-upon
bandplan.

There's still frequent use of the ATV repeater up on the hill.

The situation may be easier to deal with in areas that don't have an
active ATV community. The ARRL's bandplan for the 70 cm band states
that local bandplans and agreements override the national plan
recommendations, so it seems entirely possible for local coordinators
to agree to open up the segment you're speaking of to non-ATV uses.

I'm not sure that I follow how that affects band segment allocation.
SSB and AM are "phone" too, but that doesn't get them a space in the FM
repeater segment.

The Joint Canada and USA Amateur Radio Emergency Communications Preparedness Event is being conducted this weekend, Saturday, September 29 and Sunday, September 30, 2007. Simulated emergency traffic will be passed to and from the special event station at Signal Hill, St. John's, Newfoundland, with ARES stations in Canada and the United States taking part. Special event call sign VO1ARES will be used by the Signal Hill station and any Radio Amateur wishing to make contact is encouraged to do so before or after the formal demonstration of emergency traffic handling is completed. Please see the RAC website at <www.rac.ca> for the event web page at <www.rac.ca/fieldorg/aresjointevent.htm> to obtain all information.

I agree that a random length dipole fed with ladder line makes a great
antenna. I've used one for years with a traditional tuner. My
question: If I put a balun between the ladder line and the tuner, can I
use one of the automatic tuners built into modern rigs? If this works,
it provides the advantages of one simple antenna for multiple bands
without the hassle of having to retune when changing bands/frequencies.

Steve, if the auto tuner can handle very high SWR's.. then sure. ;-)
Seriously, I don't think it'd work. I had one of those in-line baluns
designed for the purpose of being able to run RG8 coax through the wall to
the transmatch. The coax length was maybe 8 feet. My antenna was about 50'
long, fed with 450 window line, and I used it on all bands from 10 - 40m.
The balun was from RadioWorks and was rated at maybe, I forget.... 4KW? I
was running 100 watts and that balun got HOT. After a while, it seemed that
the balun broke down from the excessive heat and was no longer useable. (Can
that really happen?) That should give you an idea about the auto tuner idea
for this kind of setup.

It's really not that hard to re-tune a transmatch. Find the right settings
for each band [segment] and write down the numbers. There are typically just
three transmatch knobs to re-set, and it can be done in five seconds. OK,
maybe seven seconds. ;-)

Depends a lot on the radio and on your individual installation.

The ATUs built into a lot of modern rigs are of the "line flattener"
persuasion. They're intended to be used with an antenna which isn't
too awfully far from a resonant 50-ohm load. As a rule of thumb, I'd
say that most of them can match a 3:1 load, some of them will cope
with most loads of up to 5:1, and few of them can handle 10:1 loads
at all well.

For what it's worth, the ATU in my Kenwood TS-2000 won't even attempt
to match anything above 10:1. It'll struggle with a lot of loads
between 5:1 and 10:1, depending on whether they're low-Z, high-Z,
and/or substantially reactive. I suspect that this ATU is probably
fairly typical of modern rigs.

External tuners often have a substantially wider matching range than
an internal line-matcher, and probably have significantly lower losses
when handling difficult loads.

An unbalanced tuner plus a robust balun is probably going to work
better than a rig's ATU plus a balun. The balun can be a problem in
either case, with difficult (high-Z) loads - it's not easy to build a
balun which has a high enough choking reactance to really balance out
the line currents well if it has to work into, say, 5000 ohms or so.
Link-coupled tuners seem to be a better technical choice for such
difficult loads, although (as per your comment) they aren't the most
convenient beasts in the world.

If your doublet length and feedline length leave you with reasonably
tolerable in-the-shack feedpoint impedances on the bands that you care
about, then you might want to consider a sort of hybrid approach. Use
a robust balun to connect to the feedline, and feed the unbalanced
side of the balun to a (bandswitched) set of L networks. You'd want
one L-network per band, selected to bring the impedance down to
somewhere in the 3:1 SWR range (or so) in the band center. The output
of the L networks would go to the transceiver.

With this approach, the L networks would perform the "gross" tuning of
the antenna feedpoint Z, and bring it down to the point at which the

transceiver's internal ATU could do the rest of the matching across
the full width of the band.

Since the L networks wouldn't need to provide an exact match for a 1:1
SWR, selecting the component values and tuning the networks would be
simplified.

I would strongly suggest against a random length doublet. A non-resonant doublet will have impedances all over the place. At some freuencies it cannot be matched at all, at others the losses in the tuner make you wish you hadn't been able to tune it. The trick is keeping those nasty spots out of the ham bands.

There are a number of G5RV type antennas that are doublets whose length has been chosen to keep those nasty spots out of the ham bands. Spend a few minutes looking up the right lengths for your doublet and avoid potentially a lot of grief.

Random length, of course, is random. you COULD get lucky. Or not ....

I guess I'm lucky. I've never had a problem matching a random-length
dipole on any frequency I've tried. That does not imply, of course,
that any random length can be successfully used on any arbitrary frequency.

And of course, "random length" should have read "as long as possible,
given the placement of the trees."

Thanks to everyone who chimed in on using an external balum and an
automatic tuner. My gut told me that the consensus ("it won't work")
was correct, but it was nice to get some more factual backup for that.

Steve, the factual backup on antenna matching has abounded
in texts, mostly the 'pro' kind, for years. It's been used for years
to impedance-match all kinds of things within a radio box...as well
as outside it. As to amateur equipment, the subject gets colored
(and both glamorized and defamed) by the lack of comparisons
to other matching equipment and the affinity that some have for
certain brands from certain manufacturers.

If you wish, I can send you a copy of the L-section matching math
that I've previously sent to Mike Coslo in e-mail. It isn't "formal"
but it is accurate, but it does involve simple algebra. The L-
sections are used in most of the automatic antenna tuners
because it is simple (and therefore low-cost) and adapts to the
measure-and-change L- or C- component algorithms that fit into
small microprocessor programs.

The heart of all of them is the Bruene RF voltage and current
detector that senses the phases of each at the load end. [or
variations on that 1955-beginning detector] The micro then
determines which parts of the L- or C-components are to be
switched in or out to get close to the ideal in-phase E & I of
RF for most power transfer.

Now the designer-manufacturers don't make auto-tuners that
will match ANYTHING...even though it CAN be done. To reduce
manufacturing costs they limit the number of internal inductors
and capacitors and THAT will reduce the ability to auto-match
anything. They are trying to be competitive on price. The newer
transceivers have SOME internal auto-tuning capability but they
clearly state the limits of their equipment. Not all separate auto-

tuners specify that. [I have both just as a backup]

"Baluns" aren't all perfect, either. They are good but just not perfect. Some are better than others but it would take ALL of them and some good lab test equipment to do a good comparison. However, MOST work well enough for amateur radio purposes and do allow for balanced-to-unbalanced line conversion at HF.

Now ANY impedance-matching tuner will let one load up just about anything. All that serves is to transfer the most RF power into a load. What is NOT known is WHERE all that RF is going. Unless some ham has a balloon-borne sensor and data transfer gizmo, NOBODY can know just where the pattern is going to be. Big trees WILL affect the pattern, especially changing it between dry and wet climate times and between different kinds of trees. So will structures and assorted conductive things (aluminum patio covers, small garden sheds, power, phone, and TV cables) all within the near-field (within five or so wavelengths). Even some houses which have had aluminum siding added on compared to similar houses with just wood or stucco or brick siding.

One can take an example of the U.S. Army's little AN/PRC-104 backpack transceiver. It covers the whole of HF using a whip antenna. It has had an auto-tuner built-in since it went operational in 1986. A human bean is a poor counterpoise for any antenna with HF wavelengths and soldiers aren't all "built to spec" for that purpose. Further, the transceiver and whip must operate from unknown field environments, in trees or well away from them, in swampy soil or dry desert. The transceiver can't get any higher than the soldier carrying it. But, the little built-in antenna tuner assures him that the whip antenna is going to get as much RF power into/out-of it as possible. The rest of it is trying to keep the whip as vertical as possible while in-use.

Now a PRC-104 won't win any DX awards or enable contacts with Antarctica or Yurp, but it is a case-in-point where an auto-tuner certainly helps maximize signals in a 1:10 frequency range with a practical-minimal fixed antenna, allowing for a highly-variaable counterpoise/ground-plane environment. The vertical whip will probably maximize its pattern between 10 and 40 degrees above horizontal, give-or-take. It works in practice (for the equivalent of QRP amateur-style). Works well enough, that is. The auto-tuner built-in certainly helps it.

Everyone's residential location varies greatly and only a very few are "perfect" (as to the antenna analyzer programs). One can load up practically anything with a tuner but only the shape and arrangement of conductive elements is going to determine where most of the RF goes to (or comes from). No tuner can

help that.

(e-mail: dl7voa@darc.de)

A5 - BHUTAN
OM Ed,N1UR, will be QRV from the Kingdom Bhutan signing A52UR in CW/SSB on all bands between Sep 28 and Oct 2. QSL via buro or direct to K2RET.

C9 - MOZAMBIQUE
Rodrigo,CT1BXT, hit the airwaves as C91R and will stay in Mozambique until August 2008. Rodrigo's favourite mode is RTTY but in the moment he is only working on 20m with 100 watts and a dipole. He plans to put up a beam for 10/12/15/17/20m soon. QSLs via his homecall.

EL - LIBERIA
"DAGOE" stands for "Dutch Amateurs Going On Expedition". The club members Arie Kleingeld,PA3A (EL2AK), Ad van Ginneken,PA8AD (EL2AG), Arie Noordzij,PA3AN (EL2AN), and Henk van Oosterhout,PA3AWW (EL2AO), are planning a major activity from Liberia from Oct 3-24. The operation on 80m/160m shall start on Oct 7 at latest. Due to the high demand they decided to work in RTTY as well. Liberia's infrastructure was totally destroyed during the civil war (1989-2003) and shall be supported with this DXpedition financially. You may request your QSLs with a donation after the DXpedition at: http://www.liberia2007.com/qslpolicy.php
The DAGOE members have three main goals:
1) Activate Liberia in a major style operation
2) The charity project with a call for donations
3) Supporting the "Liberia Radio Amateur Association" (LRAA) with equipment
The DXpedition will use two radios with amp's having the aim to log at least 25000 QSOs mainly in CW and SSB. Following antennas will be used:
160m/80m: vertical (80 radials)
40m: vertical (30 radials)
WARC: triband vertical
20/15/10m: 2ele tribander and a 3ele tribander.
QSL cards may be requested online at the address printed above. This

applies only to direct QSLs and a donation for the charity project is mandatory for that. If you send your QSLs direct you should enclose at least 2 US$ and send them to PA3AWW, Meelbeshof 8, 3355 BD Papendrecht, Netherlands. If you prefer QSLs via bureau please send them also via PA3AWW. There will be no eQSLs.

HB0 - LIECHTENSTEIN
Ekki,HB0/DF4OR, Tilman,HB0/DJ5BX, Thomas,HB0/DK9FEC, Peter,HB0/DL1FX, and Rainer,HB0/DL1ZBO, will activate the Principality of Liechtenstein again working in CW/SSB/RTTY on 80-10m from Sep 26 until Oct 1.
The crew will also take part in the CQWW RTTY Contest signing HB0/DF4OR on the weekend of Sep 29/30. All QSLs via homecalls.

HP - PANAMA
Jay Mills,HP3/K1YJ, was already active this year. He moved to Panama now and should receive his HP3 callsign soon.
QSLs for all his activities should be sent to his new QSL manager W4JS.

J6 - ST LUCIA, NA-108
Babs,J6/DL7AFS, Lot,J6/DJ7ZG, and Ju,J6/DL2ZAE, have flown to St. Lucia (NA-108) on Sep 23 and are working on 6-160m until Oct 11. They plan to operate with up to three stations simultaneously. Ju is a high speed CW OP and takes intensive care of this mode so that Babs and Lot may turn towards SSB and RTTY.
QSL cards for all calls should be sent to DL7AFS. More information can be found on their website: http://www.qsl.net/dl7afs

JW - SVALBARD, EU-026
Karl,LA8DW, and Lars,OZ1HPS, announced to become active in CW/SSB signing JW8DW and JW/OZ1HPS from Svalbard (EU-026) from Oct 1-7.
QSLs via bureau to their homecalls.

SV9 - CRETE, EU-015
Uli,DJ9XB, flew to Crete (EU-015) on monday. Main purpose of this trip is the participation in the CQWW RTTY Contest as J49XB (only) on 15m. All other bands (including 160m if he has enough space for an antenna) will be activated before and after the contest.Uli is QRV only in RTTY.

TI - COSTA RICA
Jean-Pierre,TI2/F6FQX, is working mainly in CW on HF until Oct 3.

TK - CORSICA, EU-014
The team "Equipo de DX4DX" consists of the OPs Pere,EA3CUU, Paco,EA4BT, Emilio,EA7AAW, Julio,EA7JB, Jose,EA7LS, and Ramon,EB4EPJ, and will put Corsica (EU-014) on the air between Sep 28 and Oct 5. Their call will be TK9Z in SSB/CW/RTTY/PSK on 160-10m. QSL via EA4BT, direct or bureau. More information can be found at: http://www.dx4dx.com

ZF - CAYMAN ISLANDS, NA-016
Don,W4YCH (ZF2DF), Janet,W6JND (ZF2JD), Larry,W6OMF (ZF2LH), Bob,W6BO (ZF2BO), Sue,K6SUE (ZF2MH), and Jim,W4JO (ZF2JO), will take part in the Multi/2 category of the CQWW RTTY Contest signing ZF2DF. They already hit the airwaves 6-160m using their individual calls since

Sep 24. The operation ends on Oct 1. All QSLs via homecalls.

8P - BARBADOS, NA-021
Richard,G3RWL, will be QRV again as 8P6DR from Barbados (NA-021) from Sep 28 until Oct 13. Richard is working in CW and digital modes on 10-80m running 100 watts into a G5RV antenna and also plans to take part in the upcoming CQWW RTTY Contest. He confirms the QSLs via bureau or direct via his homecall G3RWL. However QSLs may be requested as well via e-mail (g3rwl@amsat.org), there will be no eQSLs and if he finds you as a dupe in his log your chances to get a QSL are gone.

8Q - MALEDIVES, AS-013
Andrew,G7COD, is expected to hit the airwaves as 8Q7AK from the island Embudu (AS-013) between Sep 30 and Oct 12. He will work mainly in SSB but plans to operate also some CW on 30/20/17/15/12m. His preferred frequencies are 10.123, 14.147, 18.133, 21.253, 24.953 MHz (+/-10 kHz). He will try to be active from 0830-1030 UTC and from 1300-1515 UTC every day. QSLs direct or via bureau via his homecall.
Andrew states that all QSLs from previous 8Q7AK activities should be confirmed by now.

8R - GUYANA
8R1XR (DK6XR) and 8R1XT (DK8XT) will be QRV from Georgetown working in SSB/CW/RTTY on the usual DX frequencies between Sep 30 and Oct 13. QSLs via homecalls.

SOUTH PACIFIC TRIP
Ulli,DL2AH, is travelling the South Pacific planning activities from Niue (ZK2), Chatham (ZL7) and Norfolk (VK9ANH) on 40-10m between the end of September and mid-November. Ulli is working in SSB/RTTY using a FT-897 and loop antennas. The call for Niue is not known yet but he will show up as ZL7/DL2AH from Chatham. And this is his schedule:
ZK2 Sep 29-Oct 12
ZL7/DL2AH Oct 17-Oct 30 and after that
VK9ANH for about two weeks.
QSL cards via DL2AH, direct or via the bureau.

SILENT KEYS
Once again some wellknown DXers passed away last week.
W Denzil Evans,GW3CDP, passed away after a short illness at the age of 81 on Sep 15. Being one of the most active Welsh DXers he was #1 on the DXCC Honor Roll.

Abdule Rashid,S21AR, passed away on Sep 10. He was one of the persons who made the S21U DXpedition in 1990 becoming a success.

Alessio Ortona,I1BYH, was a former president of the Italian amateur radio league ARI. He passed away at the age of 79 on Sep 17.

UPCOMING CONTESTS

Sep 22/23 Scandinavian Activity Contest (SAC) in SSB
Sep 29/30 CQWW RTTY Contest
Sep 29/30 CQ IR Contest (Ireland)
Sep 30 ON Contest, 80m

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AS-146, BY4, Shandong Prov. N.E. Grp.: BY1TX/4 and BY1TT/4 will activate
Chang Dao from Oct 1-6. QSL for BY1TX/4 via EA7FTR, BY1TT/4 via BY1TT.

EU-023, 9H, Malta: Colin,G3VCQ, is spending his holidays on Malta and signs
9H3WC in CW/SSB from Sep 22 until Oct 3.

NA-035, HR, Swan Island: The activity from Swan Island (HQ8R) planned for
Sep 23-28 has been cancelled due to transportation problems.

OC-139, VK5, Kangaroo Island: Masanori,VK1ANU, will be QRV in CW on 80/40/
20/17/15m running 100 watts into wires between Sep 28 and Oct 1.
QSL via JO2SLZ.

I had to leave the important stuff... sorry to make everyone scroll down....
Len, I'm confused as to just what you're specifically referring to. Do you mean a doublet fed with balanced line (300 or 450 ohm window line) to a transmatch in the shack is something you don't recommend? Or are you referring to this system fed with coax to an autotuner? It'd seem to me that, as long as the system (fed with window line to keep the serious losses down to negligible) is in the clear, the transmission line is 90 degrees to the doublet for the "required" distance... all should be fine and the radiation pattern should emanate properly from the antenna itself, not so much the transmission line. ?

I have an ICOM T-90A (it's my first radio). It's a good "klunker" handheld radio for beginners. There's a lot you can learn with it; you can't break it unless you intentionally and deliberately try to. Some things are annoying, like the fact that the battery charge takes 14 hours, unless you have a special charger, and you can't transmit while the battery is charging, but all this is safety-oriented, apparently.

That's true, but it's not a reason to reject the 'random length'
doublet.

> Spend a few
> minutes looking up the right lengths for your doublet
> and avoid potentially
> a lot of grief.

It's not just the doublet length that matters but also the length,
impedance and loss of the transmission line. Antennas like the
G5RV choose a combination of dipole and transmission line
length that present reasonable impedances on several bands.

A very useful tool is modeling software such as EZNEC or G4FGQ's
DIPOLE3. They will give useful predictions of shack-end impedance, so
you can judge if it's in matching range or not. So even if the antenna
is 'random' length, you can have a good idea if it will match and how
efficient it will be before you put it up.

With regard to transmatches, also called antenna tuners, for balanced
loads, the two typical amateur approaches are the unbalanced-tuner-
followed-by-a-balun method, and the link-coupled method. The
unbalanced-tuner-with-balun method assumes the balun does its job over
a wide range of impedances, which isn't always a good assumption,
while the link-coupled method can be complex to bandswitch.

A third method, described by AG6K, consists of a balun followed by an
L network - the balun is on the rig side of the transmatch rather than
the antenna side. Thus the balun only has to deal with 50 ohms
nonreactive once the L network is adjusted. Google AG6K to see a
description of his method. Although his tuner uses ganged roller
coils, fixed coils with taps could be used in a homebrew version for
simplicity and lower cost.

> Random length, of course, is random. you COULD get lucky.
> Or not ....

Modeling software can be a big help in removing the randomness.

There are indeed certain lengths that are best avoided. Certainly you don't want the doublet to be near 1/4 wavelength in total length on a band you intend operating on. In the MFJ tuner manuals, there is some text on lengths you would want to avoid for our purposes.

Trick antennas such as the G5RV and OCF dipoles utilize some clever techniques to match impedance. Haven't used a G5RV, but my experience with the OCF has been fairly satisfactory. I would note that after it broke, I elected to put up another doublet with ladder line and tuner. I have been pleased with that.

> Modeling software can be a big help in removing the randomness.

Good advice. They are also an excellent method of comparing the efficiencies of the various antennas. Low VSWR is not always the mojr indicator of antenna performance.

One of the biggest reasons that I suggest the general purpose doublet is that the new Op gets an antenna up that doesn't have all of the foibles of a precise dipole, such as antenna height above ground, interaction with nearby objects, and can get multi-band operation in the deal.

The new guy or gal can then learn quite a bit by using the tuner to match up the antenna to the rig, and can see which bands are interesting to them.

Especially important, I believe is that they won't become confused and give up. I know when I started in this hobby, I got enough confusing

advice that at one point I almost hung it up because there appeared to be just no way that I could put up an antenna that would work. The antennas that I could put up were going to be too low to the ground, they were going to be too short, and on and on.

Fortunately my Elmer pulled me aside, and said "try this". Within a week, I had my doublet up and running, and I've worked the world with it.

Now I can cogitate on all the various antennas and their proponents without keeping myself off the air in the meantime.

> much the transmission line. ?

I'm trying to point out that any good tuner can "load up" to
ANYTHING...i.e., transfer RF power out of the transmitter
and into whatever the "load" is. If the "load" is just a
transmission line, a very lonnnnng one, the tuner will "load
up" on that. If the "load" is your favorite antenna type, it
will "load up" on that.

Once the RF power has been transferred into this load,
then it is up to the conductors in the "load" to radiate it

into whichever direction you expect it will go. But, do NOT expect ANY antenna to behave properly (for radiation) if its near field is impugned by nearby dielectric material or conductors.

Mostly I was making a comment on "loading up" phrases which I consider an incomplete description of what is really happening. A tuner, any tuner, will do the job of transferring RF into the "load." That isn't the whole story. Next is what the "load" does with it to create the EM wavefront. No tuner can help that.

If you are satisfied with your particular method of getting RF out of the transmitter and into some antenna, fine. Satisfaction is all part of the game. Such satisfaction is not the example to set for all. It seems to me that every-one's location is different and each presents a unique problem to solve for the more-optimum EM wavefront launch direction in that location.

Anyone who says that one kind of antenna is the "best" or one should "always" use a certain kind of balanced transmission line isn't looking at the whole picture. They are probably describing just the only (or a few) antenna installations they used. Yes, some antennas "work better" than others. In a particular location.

For someone just starting out, I would suggest just a vertical for HF. It is the least obtrusive to neighbors (can be described as a "flagpole") and most will perform adequately (to launch an EM wavefront) with a few radials for the "ground." No, it won't win awards or work DX "better" than Brand Y using Brand T transmission line, but it WILL radiate adquately...and that's the whole name of the game, ain't it? :-)

Why not, other than the fact that such a short dipole will present a feedpoint impedance that has a low resistive part and a high reactive part?

> In the MFJ tuner manuals, there is some
> text on lengths you would want to avoid for our purposes.

Never had an MFJ - my transmatches are all homebrew. I've read the MFJ manuals, and it seems to me that they were trying to avoid lengths of antenna-plus-feedline that would present very low or very high impedances at the Transmatch end of the line.

I don't consider the G5RV and OCF to be 'trick' antennas. They're simply intelligent combinations of dipole and feed systems that have been worked out to present reasonable impedances so that line losses and Transmatch requirements are reasonable.

> Haven't used a G5RV, but my experience
> with the OCF has been fairly satisfactory. I would note that after it

In the dipole-category of HF antennas, I've used G5RVs, OCFs, dipoles fed with ladder line and a Transmatch, coax-fed dipoles, fan dipoles and coax fed trap dipoles. Plus inverted-V versions of most of those.

In my experience they are all comparable radiators of RF *if* they are implemented in a way that keeps feedline/transmatch loss low and gets the antenna up and in the clear. IOW, none of them are magic, and they all have their applications.

> They

[antenna software]

Not just the antenna but the feedline system as well.

That's true to a point, but there are other tradeoffs, such as the absolute need for a Transmatch, the need to avoid certain lengths, and the difficulty of handling balanced lines in some situations.

IMHO, it is better to have a station that works well on a few bands than to have one that works poorly on all bands. Many multiband antennas, such as many commercially-manufactured "all band" HF trap verticals, are so full of compromises that their performance on some bands is highly compromised.
>
> Fortunately my Elmer pulled me aside, and said "try this". Within a
> week, I had my doublet up and running, and I've worked the world

That's the ultimate test of any antenna system: what have you worked with it?

My first HF antenna was an inverted L - what some would call a "random wire", even though there was nothing random about it.
It was end-fed and worked against a ground/counterpoise system consisting of the radiator piping and a lone ground rod. I made many QSOs with it and later versions.

The big problem with HF/MF antennas for the radio amateur is that the best choice is so dependent on the site and what the amateur intends to do. This is why it is impossible to give general advice about HF antenna types that is any good, without knowledge of the available resources and intended use.

That's a very good point, especially in today's world in which so many people live in close proximity to their neighbors and there are often restrictions on what can be erected for an antenna. My mindset tends to be stuck back in the 60's suburbia where the biggest problem was where the trees were in relation to the length of the skyhook desired, and no one particularly cared if ladder line was more unsightly than coax.

This line of thinking reminded me of a rather unique antenna-related probem that one of my childhood Elmers faced. The transmitting antenna for one of the 100 KW clear-channel AM stations was literally in his back yard. His antenna was a long wire that fed directly into the shack, and he grounded it when not in use with a knife switch. When you opened that knife switch you could literally draw a small arc of RF from the nearby transmitter. He shunted this unwanted signal to ground during operation with a low-pass filter, but it did create an interesting show for us wide-eyed young visitors to his shack.

I don't know how much bypassing and other fiddling he had to do because of the ambient RF level just from being that close to that much RF. I wonder how many of today's hams, faced with this obstacle, would simply decide that operation on HF was not possible.

In fact, I wonder if today's FCC restrictions on exposure to RF would even permit houses that close to a 100 KW transmitter.

You're right. We've (I've) made assumptions of property conditions that may not exist for the OP. My little 50 footer with ladder line was technically in the clear, but its apex was only 7 feet above the flat roof. The transmission line could only drop straight down for about 6 feet, then run suspended across the top of the roof for 20 feet, then down to the shack. Yet I worked DXCC with it, including serious long-haul, from 10 - 40 meters. We don't know the OP's situation.

That's a pretty good reason, though. 1/4 wavelength dipoles - make sure to read that as total antenna length, not 1/4 wavelength per leg, are just a troublesome combination that a lot of tuners can't tune very well.

Pretty much the case. I would surmise that the more you have to tune out that way off impedance, the more loss you might have. It's the old thing about the tuner being able to match a coat hanger. I suppose so, but it probably isn't the best way to go.

They are very clever. The OCF especially is a joyful playground to work on with antenna design programs. It is a great way to learn both the programs and antenna theory.

Often the idea of "low SWR" is put out as if it is the sole criteria. In defense of SWR lovers, modern Rigs really hate High SWR, especially reactance of the capacitive kind. But a 50 ohm resistor has 1.1:1 VSWR, and some manufacturers have taken advantage of that sort of thing in the past.

On the subject of antennas that work well on a band or two, it is sound technical advice. The problem as I see it is that most new folks these days start out with an "all band" radio, and are inclined to want a antenna that is likewise all band.

>> Fortunately my Elmer pulled me aside, and said "try this". Within a
>> week, I had my doublet up and running, and I've worked the world
>> with it.
>
> That's the ultimate test of any antenna system: what have you worked
> with it?

A lot of Western and Eastern EU, Great Britain, Iceland, Norway, most of South/Central America, about half of Africa, Israel, Australia, Antarctica, and a couple others. No JA or far eastern countries, but I haven't tried really hard, I just work 'em if I happen to hear them.

I once accidentally worked a fair part of a contest once on 75 meters on probably around 3 watts, mostly into California - I had tuned the antenna, and forgot to turn the power back up. I had works around 25 QSO's before catching that one.

Of course, that isn't quantified data, it's just anecdotal. But running at QRP levels does make for a more stern test of an antenna's abilities, especially if there isn't obvious signs of it, such as not getting calls answered. Sold me on the thing.

The technical details are that it is a 96 foot total length dipole, up around 55 feet, the center support is a short length of pvc tubing. The ladder line is soldered to the respective dipole wire. Ladder line makes an almost straight drop to the Shack window. Definitely not the best thing going, but not too bad.

Well, based on his call sign and the FCC's data for the address I did
a bit of detective work and found that this guy will have some unique
issues to deal with. The aerial photos of the address indicate that
there are some mature looking trees about so some random length wire
antenna may be possible. The lots seem very small compared to the
size of the houses too, what we'd call zero lot line homes in the
Texas area.

However, the most interesting thing is that it seems that he is
located in a valley with some fairly high mountains about that may
limit even the best HF antenna situation. This is clearly a problem
to the west as the QTH seems to be located on the base of the
mountains to the west.

I do like the random wire ideas though. This months QST has a brief
description of one installation of a random wire loop in an attic.
You just never quite know how these will perform until you put them up
and try. It can be discouraging if things don't work out though.

I bought a "Buffalo WHR-HP-G54" Wireless-G broadband router & acess point
with high gain antenna.
I flashed the Router's firmware with software I got from Sveasoft and now my
router can transmit up to 1 watt fully adjustable. And I also have extra
frequency/channels not usually availabe in the U.S.
I believe that as a licensed amateur radio op. I am legal !

Sveasoft firmware adds over one hundred new features to your ASUS,
Buffalotech, Linksys, and Netgear wireless routers including power boost up
to 1000%!

>I believe that as a licensed amateur radio op. I am legal !

Maybe yes, maybe no.

As I understand it, you have a choice. You can either operate the
router/radio, unmodified, under the FCC's Part 15 rules. In this mode
of operation you must comply with all of the Part 15 rules (which
generally require the use of certificated radio equipment... and
modifying the radio or antenna would void this certification).

Or, you can modify it, and then operate under the amateur-radio rules.
In this scenario, you must operate entirely within your ham privileges
as defined by Part 97, and follow all of those rules. You would be
allowed to modify the radio, as long as the resulting modifications
fall within the technical requirements given in Part 97. You can
transmit, but *only* within the frequency ranges specifically
authorized for amateur-radio use (these overlap the normal 802.11
frequencies but do *not* include all of the 802.11 channels!). Your
transmitter must ID itself according to the "10-minute rule", you may
not use encryption for the purpose of obscuring the transmissions, and
you may not have a pecuniary interest in the operation of the radio.

You cannot, I believe, "have it both ways" at the same time... e.g.
operate a modified radio outside of the normal set of 802.11 channels,
but use the router for commercial purpose or (according to most
interpretations) use WEP or WPA encryption for the purpose of keeping
your transmissions private.

==> NEW VICE DIRECTOR APPOINTED IN DAKOTA DIVISION

ARRL President Joel Harrison, W5ZN, has appointed Greg Widin, Kï¿½GW, of Stillwater, Minnesota, as Dakota Division Vice Director. Widin has been a licensed ham and ARRL member for more than 40 years. Originally licensed as WB2ZSH, he became Kï¿½GW in Minnesota in the late 1970s after obtaining his Amateur Extra class license. Currently Vice President and Training Director for the Stillwater Amateur Radio Association, Widin has also served as Assistant Section Manager and Technical Specialist in the Minnesota section; he is an ARRL Life Member.

Employed with 3M Company since 1982, Widin earned his AB in 1974 from Kenyon College in Ohio and his PhD in hearing science from the University of Minnesota in 1979. He completed a post-doctoral fellowship at MIT's Research Laboratory of Electronics in 1982, followed by an MS in management of technology in 1992 from the University of Minnesota. Widin is a member of the Institute of Electrical and Electronics Engineers and Phi Beta Kappa. He is also the holder of five US patents.

Widin belongs to the Twin Cities DX Association and Minnesota Wireless Association. Widen holds Worked All States (WAS) on HF, DXCC (294 entities confirmed) and is just shy of WAS on 6 meters. His main current operating interests are DX and casual contesting along with ARES and emergency communications; he also enjoys constructing electronic equipment. Widin also is a member and serves as treasurer of Boy Scout Troop 224 in West Lakeland and Woodbury, Minnesota.

==> SPECTRUM DEFENSE FUND MARKS ELEVENTH YEAR

First begun in 1996 to protect the 2 meter band from "Little LEOs" (low-earth orbiting satellites), the ARRL's Spectrum Defense Fund marks its eleventh annual appeal this year, urging members to take a stand to protect the Amateur Radio spectrum from broadband over power lines (BPL). The ARRL's concern is not whether BPL will ultimately succeed or fail, but whether the federal government will fulfill its obligation to ensure that BPL systems - if and when they are deployed - will not pollute the radio spectrum.

ARRL Chief Executive Officer David Sumner, K1ZZ, calls protecting the radio spectrum against BPL interference "a good example of how the ARRL works on all fronts to protect Amateur Radio. We must be patient -- spectrum defense is a never-ending mission. We must be resolute, not discouraged by the occasional setback. We must be creative, seeking alternate paths to success. Above all, we must be accurate; credibility is a precious commodity that is too easily lost."

The ARRL first brought problems concerning BPL interference to light five years ago in the October 2002 issue of QST, calling it a potential source of "radio smog." In that time, the League has fought hard to protect our precious spectrum, including the fight for "stronger protection against BPL interference in the FCC's rules, and when the FCC failed to go far enough we took them to court -- a huge but necessary financial commitment. We have taken our case to Congress, seeking legislation directing the FCC to do a serious study of the interference issue. We have done our technical homework, verifying the inadequacy of the FCC's rules and documenting violations by irresponsible BPL companies," Sumner said.

He continued: "But we also have cooperated with reputable firms, helping them to understand the seriousness of the issue and the steps they need to take to avoid problems with radio amateurs. We've made some important gains on that front -- no thanks to the FCC, which (unlike many in the BPL industry) remains more interested in defending its early errors than in correcting them."

Sumner does explain that BPL interference issues are not all that the Spectrum Defense Fund is allocated for. He says that next year, the ARRL will begin its preparation for the 2011 World Radiocommunication Conference; agenda items for WRC-11 will be discussed this year in Geneva at WRC-07. "We will continue to defend our spectrum access against reallocation as well as against the insidious threats posed by unlicensed devices and systems," he said.

All ARRL members are an essential part of the team that will ensure that we win the fight over spectrum encroachment. With a successful Spectrum Defense Fund campaign, "the ARRL is able to stand up for Amateur Radio -- just as the League has done since its founding nearly a century ago," Sumner said.

He pointed out that the proceeds to the Spectrum Defense Fund are restricted to being used only for that purpose - spectrum defense: "When you make your contribution, you can be sure that your contribution is spent on these, and only these activities. If you've checked the ARRL audited financial statements that we post on the ARRL Web site each year, you know that the expenses attached to protecting our frequencies are never fully funded by the Spectrum Defense Fund. Membership dues and other revenues cover the rest. In fact, every penny of income the ARRL receives is devoted to the protection, promotion and advancement of Amateur Radio. It's why the League was created in 1914 and why it exists today."

For more information on how you can support the ARRL's efforts to protect the Amateur Radio spectrum, please see the Spectrum Defense Fund page on the ARRL Web site <http://www.arrl.org/defense>.

==> AMATEUR RADIO GOES TO WASHINGTON

Army MARS Chief Stuart S. Carter, AAA9A, has invited the ARRL and Amateur Radio representatives to join a Military Affiliate Radio System (MARS) demonstration outside the Capitol building in Washington, DC on October 3. Hams around the country are asked to aid in the demonstration by making HF contacts during the day. With help from Laura Abshire, Legislative Aide to Representative Mike Ross, WD5DVR (D-AR), Tricia Russell, Legislative Aide to Representative Steve Israel (D-NY), and coordination of the myriad details by "Pudge" Forrester, W4LTX, Systems Administrator for Representative Roscoe Bartlett (R-MD), the "show" is set for next Wednesday, and hams around the country can help.

ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said, "Thanks to a MARS invitation to join in a demonstration, and excellent coordination work by Forrester, the October 3 demonstration of Amateur Radio and MARS emergency communications will be front and center in the open space between the Capitol building and the Botanic Garden in Washington, DC." Pitts went on to say that the regional MARS organization is planning to conduct an exercise demonstrating emergency communications at the Capitol, as well.

The exercise assumes a Category 3 hurricane, Hurricane Quincy, will make landfall on October 2 over the coastal areas of Delaware, Maryland, DC and Virginia. Quincy will progress northward to New Jersey and Pennsylvania and then travel inland to the south, returning to the Atlantic Ocean on October 5

via the Carolinas and Georgia. During this time, MARS resources will be challenged by ongoing events in every part of the country, including ice storms, tornadoes, severe thunderstorms, and earthquakes.

There will be a communication trailer, tent type shelter, four HF transceivers -- voice, PSK, and Winlink -- and VHF equipment at the site. The local Voice of America (VOA) organization and MARS have local repeaters and digipeaters available. Power will come from solar panels and generators with battery backup. The emergency communications trailer, owned by the Blue Ridge Association, Baptist Convention of Maryland/Delaware, part of the Southern Baptist North American Missions Disaster Relief Ministries, will also be on hand.

Representatives from ARRL headquarters, including Pitts, will be there. They will have ARRL public relations materials as well as video that shows the negative impact of BPL if current FCC rules are not modified. In addition, there are special materials for Members of Congress and their staff advocating Amateur Radio's positions on several legislative issues, including information to solicit co-sponsorship of H.R. 462 and H.R. 2743.

While MARS will be conducting their drill on their frequencies, Amateur Radio operations are scheduled from 1400-2100 UTC. While there may be last minute changes, plans are to try to center HF voice contacts around 14.250 and 7.250 MHz, and on PSK at 14.070 MHz. "By showing Members of Congress our nationwide capabilities and potentials, we advance the Service in many ways," Pitts said.

Representatives Ross and Bartlett plan to stop by. Army MARS is sending their Chief of Operations Grant Hays from Arizona. Mike Barrett, K3MMB, of the Transportation Security Administration's Office of Security Operations is aiding with the operations and logistics.

==> GET READY FOR JOTA

Jamboree on the Air will celebrate its 50th year this year when it gets on the air October 19-21. Normally a 48 hour event, this year's JOTA will be 50 hours long in recognition of the anniversary. The fun begins at 2200 (local time) October 19 and ends at midnight (local time) October 21.

An on-the-air operating event sponsored by the World Scout Bureau, JOTA was founded in 1958 by Les Mitchell, G3BHK. It has grown to become the largest international Scout event. More than half a million Scouts and Guides in more than 100 countries participate in JOTA, involving as many as 10,000 Amateur Radio stations.

The event relies on the Amateur Radio community and local hams for its success. Getting Boy and Girl Scouts (including Cubs and Brownies) on the air to talk with other Scouts around the world provides a great opportunity to expose youth to Amateur Radio. Some troops and clubs team up to make a big splash with lots of activities, radios and antennas, offering a variety of modes to experience. For others, JOTA provides an opportunity to coach a smaller group of Scouts and to just have fun talking on the radio. Scouts usually enjoy communicating by speaking into a microphone, but some radio

amateurs are able to provide other modes, such as slow-scan TV or amateur TV, satellites, packet radio, RTTY or even EME!
For more information on the 2007 Jamboree on the Air, please visit the ARRL JOTA Web site <http://www.arrl.org/scouts/jota> where you can find general rules, suggested exchanges and recommended frequencies. There will also be a place on the ARRL Web site to tell your JOTA stories at <http://www.arrl.org/scouts/jota/Stories/>.

==> SIMULATED EMERGENCY TEST SCHEDULED FOR OCTOBER

America was abruptly reminded of the critical role of Amateur Radio in 2005 as Amateur Radio operators came from all over the country to provide emergency communications when other systems failed during Hurricanes Katrina and Rita. In 2007, Amateur Radio operators continued to provide lifesaving services in many floods and wildfires around the country. Because of the complexity of today's normal communications systems, they are often overwhelmed in a disaster. These painful lessons are being tested again on October 6 and 7 as Amateur Radio operators around the country conduct their annual Simulated Emergency Test.

This year, Amateur Radio operators will be replicating many scenarios that have crippled normal communications in the recent past. These include flooding, wildfires, bombings, ice storms, hurricanes and earthquakes. Something new for this year are plans for responses in case of pandemic flu and the probability that large populations will need to shelter at home and not be able to go out.

Using emergency powered radios and working with local agencies, hams will establish radio communications networks that can be used should there be a failure or overload of normal services.

While the ARRL has scheduled the Simulated Emergency Test for October 6-7, some ARRL Sections have scheduled their SET for different dates. Please check with your Section Manager or Section Emergency Coordinator for the date of the SET in your Section.

==> ARRL WELCOMES USTTI STUDENTS

Next month, the ARRL will welcome six students from various countries from all over the world who want to learn how to administer and regulate Amateur Radio programs in their home countries. This course, offered by the United States Telecommunications Training Institute (USTTI), will help participants create, administer and foster an Amateur Radio Service in their countries.

Designed for those in developing countries who regulate and manage their country's Amateur Radio Service, this course will help participants learn just who are radio amateurs. ARRL staff instructors will help course participants discover the ever-expanding universe of Amateur Radio communication. They will explain why Amateur Radio operators, upwards of three million individuals in virtually every country of the world, have earned licenses to operate stations in these services and why they are recognized, both by their governments and internationally, as a valuable voluntary telecommunications resource. Course participants will also discover

how a telecommunications administration can bring the benefits of a healthy Amateur Service to its nation.

Now in its 25th year, USTTI is a nonprofit venture involving leading US-based communications and information technology corporations and leaders of the federal government cooperating to provide tuition-free management, policy and technical training for talented professionals from the developing world.

==>SOLAR UPDATE

Tad "Ain't No Sun(spots) When She's Gone" Cook, K7RA, this week reports: Last week's report stated the possibility that zero-sunspot days were about to end, but no such luck. Instead we've seen no sunspots for three weeks straight, since September 7. Geophysical Institute Prague predicts unsettled conditions for September 28, unsettled to active September 29, unsettled September 30, quiet October 1, unsettled October 2-3 and quiet to unsettled October 4. Sunspot numbers for September 20 through 26 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 66.8, 66.9, 66.7, 66.3, 66.1, 66.2 and 66.5 with a mean of 66.5. Estimated planetary A indices were 10, 9, 11, 15, 10, 6 and 3 with a mean of 9.1. Estimated mid-latitude A indices were 6, 7, 10, 11, 7, 5 and 2 with a mean of 6.9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the ARRL EME Competition is on September 29-30. The NCCC Sprint (CW) is September 28. On September 29-30, the CQ Worldwide DX Contest (RTTY), CQIR - Ireland Calling, the Texas QSO Party, FISTS Coast to Coast Contest and the UBA ON Contest (CW) are on the air. The ARS Spartan Sprint is October 2. The YLRL Anniversary Party (CW) is October 2-4, the German Telegraphy Contest and the 432 MHz Fall Sprint are October 3. The SARL 80 Meter QSO Party is October 4. Next week, look for the NCCC Sprint (CW) on October 5. On October 6, be sure to check out the TARA PSK Rumble Contest, the NCCC Sprint (CW), the International HELL-Contest (80 meters) and the EU Autumn Sprint (SSB). The Oceania DX Contest (SSB), the California QSO Party and the PRO CW Contest are October 6-7. Tune in for the International HELL-Contest (40 meters), the UBA ON Contest (6 meters) and the RSGB 21/28 MHz Contest on October 7. The YLRL Anniversary Party (SSB) is October 9-11 and the 10-10 International 10-10 Day Sprint and NAQCC Straight Key/Bug Sprint are both October 10. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, October 7, 2007 for these online courses beginning on Friday October 19, 2007: Amateur Radio Emergency Communications Level 2 (EC-002);

Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF - Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Florida Hams Help Nab Burglary Suspects: Some hams in Florida got an earful when they heard what turned out to be teenagers planning various robberies over the Jupiter Farms 444.400 MHz CERT repeater. On September 8, Al Moreschi, AG4BV, of Jupiter, and John Levey, KI4HTL, a retired police officer, of Palm Beach Gardens, overheard, according to Moreschi, "what sounded like men talking about committing a burglary and we were monitoring them on one of the local ham repeaters." Moreschi said he and his fellow hams notified local law enforcement agencies of the break-in, but the alleged thieves "didn't describe the house well enough to get the exact address." The amateurs kept listening for the vandals to show up again on the repeater. On September 21, they were in luck. This time the hams were ready and had set up recording devices to capture the break-in as it transpired. Moreschi said he and his fellow hams recognized the voices and started recording; they also called the police. The last transmission heard over the air by the suspects was, "Code Red, Code Red, Code Red. There are cops everywhere, dude!" Three suspects were captured and arrested: one at the scene, one who was walking down a nearby road and one at a local grocery store. An official with the local sheriff's office said that the suspects were charged with burglary for the two break-ins; the three are suspects in other local robberies, as well. The tapes made by the hams are in the custody of the sheriff. Moreschi said that the suspects might also be facing charges from the Federal Communications Commission for operating without an amateur license. "We don't know how these kids got hold of the ham radios. Their transmissions came right over the CERT repeater, and that has a special tone and you have to have a special tone to key it up," Moreschi said.

* ARRL Again Participating in the Combined Federal Campaign: For the sixth year running, the US Office of Personnel Management has designated the ARRL to participate in the 2006 Combined Federal Campaign (CFC). In the past, this campaign for federal government civilian employees, US Postal Service workers and members of the military has generated more than $100,000 for ARRL programs. The CFC provides an easy way to support ARRL's effort to represent its members and all radio amateurs. Similar to the United Way, the CFC encourages individuals to pledge by payroll deduction to non-profit organizations of their choice. The ARRL encourages eligible radio amateurs to consider the League when designating campaign recipients. Those wishing to select the ARRL to receive all or part of their payroll deductions should designate organization 10099 when completing their CFC donor forms. Donations to ARRL can be designated for Diamond Club contributions, the ARRL Spectrum Defense Fund orthe ARRL Education & Technology Program. Or, donors may make unrestricted contributions to the League. One important note: Since the CFC does not provide the ARRL with the names of individual donors, the ARRL Development Office would appreciate a copy of the donor form to ensure that each contribution is applied according to the donor's wishes and that the contribution or pledge can be properly acknowledged. The 2007 CFC ends

December 15

* Pension Protection Act Streamlines Charitable Donations from IRAs: The ARRL Development Office notes that a provision of the Pension Protection Act (PPA) of 2006 offers an opportunity for certain IRA holders to give something back to Amateur Radio by donating to the Spectrum Defense Fund, to the ARRL Education and Technology Fund or for the ARRL Diamond Club -- which provides flexible funding for a variety of programs not supported by member dues. "Individuals who are at least 70-1/2 and support nonprofits of their choice may use IRA or Roth IRA assets as a convenient, tax-efficient source to make contributions while conserving non-IRA assets," ARRL Chief Development Officer Mary Hobart, K1MMH, points out. "Contributions must be made directly from the IRA to the organization, not to a donor-advised fund, gift annuity or trust." Hobart says contributions of up to $100,000 may be made by December 31, 2007: "A direct contribution from an IRA to a qualified organization is excluded from income," she emphasizes. "We have received significant support through this program. I hope you are considering a year-end gift to the ARRL." This two-year program expires December 31, 2007. Hobart urges prospective donors to consult with a financial advisor before taking advantage of this opportunity. Contact Hobart <mhobart@arrl.org> for more information or call 860-594-0397. You can also visit the ARRL's PPA Web site <http://www.arrl.org/development/ppa.html#top> for more information.

* Diamond Terrace Still Shining Bright: While there is still plenty of room in the Diamond Terrace for those who wish to honor their own call sign or that of a family member or friend, the seasons are changing and soon there will be snow in Connecticut. The final brick installation of 2007 will be taking place in the next month or so before the ground freezes. Now is a good time to go ahead and make a contribution to the Diamond Club and have your brick placed in the Terrace before the end of the year. Don't forget to request a Lucite replica of the brick -- this makes a great addition to your shack, or you can give it to the family of a Silent Key or your Elmer. Please visit the ARRL's Diamond Terrace Web site for more information <https://www.arrl.org/forms/development/donations/diamondclub/terrace.html>.

* Redeem Those Soon-to-Expire International Reply Coupons: If you have old US-issued International Reply Coupons (IRCs), they can still be redeemed, but you need to do it very soon. IRCs issued prior to 2002 (the old small ones) can be redeemed for one penny less than the issue (stamped) price, and must be redeemed by October 10. IRCs with an expiration date of December 31, 2006 can also be redeemed for one penny less than the issue price; these must be submitted to the post office by September 1, 2008. All non-US stamped IRCs issued prior to December 31, 2006 are non-redeemable. For more information, please refer to pages 28 and 57 in US Postal Bulletin 22215 <http://www.usps.com/cpim/ftp/bulletin/2007/pb22215.pdf>, dated September 13, 2007. Thanks to "The Daily DX" for this information.

* New Name for Space Environment Center: The National Oceanic and Atmospheric Administration (NOAA) will rename the Space Environment Center (SEC) effective Monday, October 1, 2007. The new name will be the Space Weather Prediction Center (SWPC). The center is one of the nine National Centers for

Environmental Prediction (NCEP) within NOAA's National Weather Service. The center provides real-time monitoring and forecasting of solar and geophysical events, conducts research in solar-terrestrial physics and develops techniques for forecasting solar and geophysical disturbances. According to the SEC Web site, "The new name aligns the space weather center with the other NCEP centers and more clearly conveys its operational nature." The SEC Forecast Center is jointly operated by NOAA and the US Air Force. For more information, please visit the SEC Web site <http://sec.noaa.gov/>.

* Let Us Know What You Think: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary.

(Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

All that is certainly true. But I don't see anyone
saying that one kind of antenna is "best" for all locations,
or that one should "always" use a certain kind of transmission
line in all applications.

It's also not the whole story, either, because what
must also be considered is the sort of radio operation
that is being considered. Does the ham want only DX,
or regional/national QSOs? Several bands, or only one
or two? Will operation be confined to one part of a band,
or spread out over the entire band?
What time of day will most operating take place?
Will there be ragchewing, net operations, contesting?

All that and more have an effect on what the 'best'
antenna is for a given location.

> For someone just starting out, I would suggest just a
> vertical for HF.

Depending on a whole bunch of factors, that could be
good advice, or very bad advice.

> It is the least obtrusive to neighbors

Not always. It depends on the location. A wire
antenna can be much less noticeable than an
HF vertical in many situations.

> (can
> be described as a "flagpole")

Perhaps, but I don't think anyone who has
seen a typical manufactured amateur HF
trap vertical would consider "flagpole" an
accurate description.

> and most will perform
> adequately (to launch an EM wavefront) with a few radials
> for the "ground."

Maybe - and maybe not.

The performance of an HF vertical is dependent on
many factors, such as the ground system, objects
in the near field, how much loading is used to obtain
resonance, ground losses in the Fresnel zone, etc.

> No, it won't win awards or work DX
> "better" than Brand Y using Brand T transmission line,
> but it WILL radiate adquately...and that's the whole name
> of the game, ain't it? :-)

It may not radiate adequately.

For example, on the lower HF bands such as 80/75 and 40 meters,
the dimensions of a full-size quarter-wave vertical and radials may
become impractical (60+ feet on 80/75, 30+ feet on 40 meters).
Most trap vertical designs use a considerable amount of
inductive loading on those bands, reducing the efficiency and
radiation resistance as well as the SWR bandwidth.

The lack of high-angle radiation from such a vertical may make it
almost useless for daytime and closer-than-DX-but-farther-than-local
communication on those bands. An amateur located in a valley, such as
the one who started this thread, might prefer
useful radiation that leaves the antenna at angles that would leave
the valley.

At this point in the sunspot cycle, the amateur bands above 11 MHz are
often useless for ionospheric propagation much of the time,
particularly during darkness hours. Having an effective antenna for
the lower HF bands can be the difference between making QSOs
and not making them.

There's also the cost factor.

Yes, "everyone's location is different and each presents a unique
problem to solve". Which means that recommending a vertical
antenna to someone just starting out could be very bad advice unless a
lot more information was gathered first.

And if Brand Y using Brand T transmission line works better,
why not use it?

IMHO, the "whole name of the game" is useful radio communication. IOW, making QSOs.

I have seen situations where it was good advice to tell a ham starting out on HF to put up a vertical. I have also seen situations where that would be very bad advice. Same for dipoles of various kinds, loops, random wires, etc.

I'm not convinced. Depending on the transmission line impedance and
length, the shack-end Z could be within the matching range
of the Transmatch.

> > I don't consider the G5RV and OCF to be 'trick' antennas.

Agreed. But so are other implementations such as trap dipoles and
the classic dipole-with-ladder-line feed, where you try different
dipole and transmission-line lengths.

> Often the idea of "low SWR" is put out as if it is the sole criteria.

Too often.

> In

Well, that depends on how you define 'modern'...

> But a 50 ohm resistor has 1.1:1 VSWR,

Not just in the past. Google "Maxx-comm matcher" (try different
spellings). Those folks are still in business.
>
> The problem as I see it is that most new folks these

Which may or may not be a good idea. If the only bands that
are open when you have time to operate are ones where your
antenna works poorly, the result is going to be frustration.

> A lot of Western and Eastern EU, Great Britain, Iceland,

Situational awareness, that's all. With my rig, the power level is
pretty obvious.

The Ultimate Test is "what have you worked on it?" Theory is great
but the real proof is in the QSOs.

> The technical details are that it is a 96 foot total length dipole, up

I suspect that the 96 foot length was decided because that's what
would fit in the available space.

> an almost straight drop to the Shack window. Definitely not the

> best
> thing going, but not too bad.

Actually, what you describe is pretty close to optimum for a simple multiband antenna system in limited space, which I suspect is the main issue.

Are you using true ladder line, or "window line" (Twin Lead with holes punched in the insulation)? True ladder line (heavy wire, wide spacing, mostly air insulation) has lower loss and less weather effects. If the line is short there's not much difference, but as frequency and line length increaseit can be worth changing out.

Depending on the shack-end impedances, different Transmatches can have more or less loss. The worst-case scenario is where a 4:1 balun is used with a shack-end impedance that has low resistive and high reactive values. The poor Transmatch has to try to deal with one quarter of the resistive part!

Dave,
I agree with your point of view.
I said "And I also have extra
frequency/channels not usually availabe in the U.S."
The extra frequency/channels are European. I have set the router NOT to use
them. I was just commenting that they are there.
I named my router and network WH2T so any time it is transmitting it
transmits my callsign.
I am not using WEP or WPA encryption, I live in a very rural area.
Very 73, Ace www.WH2T.com

This is WIANEWS for week commencing SEPTEMBER 30 2007

NATIONAL NEWS

What is the best future direction of the WIA Grant scheme?
That is the question that the WIA Board asks members advice.
VK4ERM Ewan McLeod VP WIA joins us.

The 2007 Grant Committee has now reported and the WIA Board decisions on allocations of grants has been publicised on the WIA web site and in this News item.

The committee made a number of comments about the 2007 scheme and the Board believes that WIA members should have the opportunity to provide input into any changes to future schemes of this kind....

The WIA Board believes the grant schemes can be an important element of supporting the development of amateur radio. Affiliated Clubs in particular should consider what could be done to make the scheme more appropriate given the comments and observations of the Grant Committee.

The full text of the Grant Committee comments are on the WIA web site but in essence what they said was this:

Firstly, the committee considers that the scheme is not working as well as it could They believe that Innovation is not being stimulated. For instance they noted that no 2007 applications were received for digital communications, APRS or any other newer technology or innovative projects. They suggest that future grant schemes should redesigned to promote innovation in special interest areas. This, they argue, should promote clubs to look outward into newer areas of technology applicable to amateur radio.

The committee was disappointed that many clubs have an overwhelming focus on operating and maintaining repeater communications systems, where most of the technology involved is well established. They felt that few grant applications focused on the promotion of amateur radio or the WIA. Most promotion was incidental to the project being applied for.

The Grant Committee also commented on the need for a different approach to promoting training opportunities, which they felt were best dealt with by some other approach than competitive grants. I should note here that members will be aware of the very excellent brochures on amateur radio and on the WIA we have produced and distributed widely. These make a big impact on our marketing and promotion tasks...

Finally in their comments, the committee noted that the grants scheme requires a reporting mechanism and this is a matter we will follow up in our correspondence with clubs and in future schemes.

I would ask all members to consider these issues and give us advice by the closing date of 1st December this year. In particular the WIA Board would like to hear how you think your club would see the grants scheme evolving.

Comments should be forwarded to the WIA Secretary no later than 1 December 2007. Comments may be emailed to secretary@wia.org.au or by post to the Secretary WIA at PO Box 2175 Caulfield Junction Vic 3161.
Subject head emails or mark envelopes "Future Direction of WIA Grant Scheme.

VK4ERM Ewan McLeod VP WIA

Brett VK2CBD reports that a very successful open weekend was held at the CSIRO Parkes radio telescope last week with about 3500 people in attendance. About 2000 people took the opportunity to have a close look around the facility on one of the many 30 minute guided tours that were conducted.

The WIA, Orana Region ARC and the Orange and Districts ARC were all in attendance handing out lots of information and advice for those interested in amateur radio. Most of the promotional material and give always which included caps and stubby holders from Icom Australia, CD's full of AR related programs and information, copies of AR, and the now well known "Calling CQ" pamphlets were given away during the weekend. All in all a fantastic result for amateur generally and for the Orana and Orange Clubs. Brett would like to acknowledge the splendid job done by all those involved, including Brian VK2KML, James VK2FQZL , John and Jean VK3???, Jamie VK2???, Bob VK2???, Phil VK2FIL, and Greg VK2???.

BREAK IN
An attempted break in has taken place at the club rooms in Farrer.
Entry was gained to the compound by cutting the chain on the side gate.
Despite some heavy duty attempts on the shack door they were unable to gain entry. The existing lock was damaged in the attempt however it still prevented entry to the shack. Security has been further enhanced thanks to Alan VK1WX.

OCTOBER 27-28
The Wagga Amateur Radio Club is this year's host for the Riverina Field Day.

The Field Day is being held on the 27th and 28th of October. So please pencil the date into your calendar.

The venue is again the clubhouse in Small St. The usual flea markets, Trade and other displays will run continuously in the hall from 9am on Sunday.

There will be a Field Day dinner to mark the opening and will be held at Clubrooms on the Saturday evening. It will take the form of a smorgasbord. Bookings are essential.

More Field Day information can be obtained from the club's website http://wagga.radiocorner.net/

Wagga Wagga is the largest inland city in NSW and is well situated halfway between Sydney and Melbourne. These days it is a very leisurely 4 and a half hour drive from Sydney's outskirts with the majority of the trip on dual lane highway. So why not plan a getaway and join us for the weekend.

For more information contact John VK2YW on 02 6926 5471 AH or vk2yw@wia.org.au

Allan VK2JED informs us all that Westlakes Amateur Radio Club will be holding its First Field/Market Day on the 11th November, Lee Andrews Communications will be at this event.
The gates will be open to the community at 8am and will close around 4pm.

VK2JED has also asked that members and visitors please have a look through their gear to see if there is anything that they would like to donate to Westlakes club for this event.

VK3
web service:- http://www.amateurradio.com.au/news/

IRLP Nodes on the move.

In line with the new simplex frequencies for IRLP nodes, several VK3 gateways have made the change. VK3DRB node 6340 has moved to 145.400 , new node VK3RVZ node 6506 is on 145.350 and VK3HFS Node 6167 soon to be an R call has moved to 145.325

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

Prasad VU2PTT, has given a talk to a Mass Communication & Journalism class at a leading college at Bangalore about the usefulness of Amateur Radio in general.

This at the request of the Professor of the class.

The more we are able to spread the "good word" about our hobby, the stronger it becomes, world wide!

The final version of the talk is available, contact vu2ptt@gmail.com

CONGRATULATIONS - RESULTS

In Summerland, northern VK2, their YOUNGEST HAM HAS RECEIVED HIS CALL.

Aaron Smith has received his Call, VK2FUNN. From Ocean Shores, he is 10 years old. Congratulations Aaron. Also VK2FUNN's entire family are all licensed.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages. Participating clubs keep this site up to date and post the latest information for all to see.

NEW SOUTH WALES

Summerland (Lismore), their next Foundation course/exam will be 10-11 November If you know of any prospects, advise them of this date and let John VK2JWA or Duncan VK2DLR of their details.

Summerland Amateur Radio Club. VK2SRC Ph.: +61 02-66247247

VICTORIA

EMDRC Foundation Licence Course
Course: SATURDAY OCTOBER 6TH, 9AM-1PM
Assessment: SUNDAY OCTOBER 6TH, 9AM-1PM

"Your Entry Into Amateur Radio", the course handbook, is available from EMDRC meetings, in-store at Strictly Ham in Bayswater, or posted by WIA www.wia.org.au

QUEENSLAND

The Redcliffe Club will be conducting Foundation licence training at the Club rooms commencing on 8 October. Alan Jenner, VK4KZ, will hold classes every Sunday for 4 Sundays, commencing 10.30 am and finishing at 3 pm. If you wish to join these classes please contact Alan by phone, 5497 4634 or email him at alan.jenner@bigpond.com.

SOUTH AUSTRALIA

Adelaide Hills Amateur Radio Society will run Foundation licence's
at the Aviation Museum, 56 Lipson Street Port Adelaide, November
3rd and 4th. Contact the course convenor, Sasi Nayar on 0417 858 547

Examinations are hosted by South Coast Amateur Radio Club.
Those interested in sitting for foundation or license upgrades,
please contact by email
vk5kbj@internode.on.net

WESTERN AUSTRALIA

HAM COLLEGE WA RESULTS

Congratulations to all those people who participated in the last Foundation Course and subsequently on passing your exam. I would like to personally congratulate Brian and Ann from Collie who I am sure we will hear on the air very soon.

Don't forget next exam session for Ham College is the 27th October - If you want to upgrade that call then now is the time to get studying and get your name in to me - call 0412 704226. Last Foundation course for 2007 will be November - book early to avoid disappointment.

and finally some words of wisdom.

An OM will pay $2 for a $1 item he needs.
An XYL will pay $1 for a $2 item that she doesn't need.

A YL worries about the future until she gets an OM.
An OM never worries about the future until he gets an XYL!

A successful OM is one who makes more money than his XYL can spend.
A successful YL is one who can find such a man!

BPL WITH VK2DKN PHIL WAITE

In last week's broadcast I mentioned that the WIA was attending the international CISPR BPL working group meeting in Sydney.

The aim of this Working Group is to set measuring methods and propose emission limits in order to protect established radio services in the frequency band 1.6 to 30 MHz from interference from BPL.

The meeting was attended by about 40 people with several representatives from countries such as France, Germany, UK, USA and Australia. The WIA attended as an observer.

At the last Working Group meeting in Geneva (which Australia did not attend) those present agreed to submit a draft proposal to change the test method for measuring conducted emission from BPL modems.

The Australian group presented three papers to this latest meeting in Sydney which suggest that, without modification, the proposed change would relax the emission limits for BPL modems by at least 20dB.

Following spirited technical discussion a sub-group of 10 technical experts was formed to investigate the issues and report back to the next CISPR BPL Working Group meeting in Washington, late January.

CISPR is where the rubber meets the road as far as BPL is concerned, and as CISPR's charter is to protect radio communications services the outcome from the BPL working group will be very interesting. We believe it will be very difficult for CISPR to adopt methods and limits which both allow BPL to operate and also protect HF radio communications services.

This is Phil Wait, VK2DKN, for the WIA.

SILENT KEYS

Jim VK5NB who died last week. He was a president of the SA division for some time and involved right up until the winding up of the SA Division. He was passionate about the WIA and the need for a strong membership. Jim also was proud of his radio museum. He loved restoring vintage broadcast sets and older ham radio equipment.
Jim was the president of the Adelaide Hills Club until his passing and was very involved with his church and other volunteer work in the community. As Bob VK5NZ told me "He will be sorely missed Graham."

INTERNATIONAL NEWS - VK5MM

SOUTH AFRICA

TAKE YOUR HAND-HELD TO WORK ON OCTOBER 5

Friday 5 October 2007 is the SARL National Take Your Hand-held to Work Day. The objective of the event is to create public awareness for amateur radio and the technology that it embraces.

Many repeaters will be linked through IRLP, the Internet Radio Linking Project, to create activity across South Africa.

If you are not at work on 5 October or are retired, come on the air and share your experiences with other radio amateurs talking from work.

CANADA

A joint Canada and USA Amateur Radio Emergency Communications Preparedness Event is being conducted this weekend, 29 and 30th. Simulated emergency traffic is being passed to and from a special event station at Signal Hill, St. John's, Newfoundland, with A.R.E.S. stations in Canada and the United States taking part.

Special event call sign VO1ARES will be used by the Signal Hill station and any Radio Amateur wishing to make contact is encouraged to do so before or after the formal demonstration of emergency traffic handling is completed.

Please see www.rac.ca

==========
NEWS FROM ARNEWSLINE

TEXAS CB'ER FINED $7000 BUT WILL ONLY PAY $225

A Texas CB operator originally fined $7000 for his refusal to permit a station inspection will now only have to pay a token $225.

The operator was originally issued a $7000 Notice of Apparent Liability to Monetary Forfeiture. This after an inspector from the FCC's Houston office tracked interference to CB channel 19 to Winton's residence. When told to turn off the transmitter Winton obliged but he refused to let the inspector look over his gear.

The FCC rules say that he must permit such an inspection or expect punitive action. In April the FCC did just that by issuing the $7000 fine. But he provided proof he could not pay and the FCC decided to adjust the amount down to the $225 level. Once he pays it will be. case closed.

HAM RADIO IN SPACE: THE SAGA OF AO-7 CONTINUES

Like a Timex watch, its still ticking. Of coarse we are referring to the AO-7 ham radio satellite which was one of the earliest birds that radio amateurs had to work with. Amateur Radio Newsline's Fred Vobbe, W9HDU, takes a look at this aging but still operational ham radio miracle on orbit:

The Amsat OSCAR 7 ham satellite was launched on November 15, 1974 on a Delta rocket from Vandenberg Air Force Base, Lompoc, California. It initially stopped transmitting in 1981 after a battery failure. But it sprang back to life on June 21st 2002. Since its miraculous emergence from the long term battery problem, AO-7 has been an available to use.

SSB in Mode A is the normal with several QSOs able to take place at a time. Mode A uses an uplink from 145.850 to 145.950 MHz and a 10 meter downlink of 29.400 to 29.500 MHz . This transponder is linear, non-inverting.

Numerous reports of its switching between mode A and B have been verified. Mode B uses an uplink of 432.125 to 432.175 MHz and downlinks on 145.975 -through 145.925 MHz. But there is a bit of a problem in using Mode B. Due to changes in Amateur Service and Amateur Satellite Service there are questions as to legality of Amateurs transmitting to AO-7. The uplink frequency predates the WARC '79 allocation of 435 to 438 MHz by the International Telecommunications Union for the Amateur Satellite Service. This puts the uplink in 70cm weak signal segment. Potential users should realize that when they are uplinking Mode B to a satellite, they are no longer operating in the Amateur Service but instead operating in the Amateur Satellite Service. Thus they are subject to Amateur Satellite Service rules. Therefore uplinking to AO-7 is possibly illegal since the Amateur Satellite Service is not permitted at 432.1 MHz.

But in Mode A, the AO-7 the satellite has a much larger footprint than AO-51 and is in view much longer. It also requires some of the simplest gear of any ham radio bird currently in flight. Equipment that you will find in almost every ham shack, world-wide.

For the amateur radio Newsline. I'm Fred Vovve, W8HDU.

So dust off those mode A high frequency receivers and 2 meter SB transmitters or transverters and try to make a contact on the AO-7 bird. It may take a little more effort to use, but it's fun and rewarding.

==========

RSGB NEWS G4NJH

RAYNET on hand to help plane crash

South Sussex RAYNET group were on hand to help when a plane crashed at the Shoreham Air show.

Each year an emergency plan is rehearsed and refined, in the hope that it will never be needed. However on the weekend 15th and 16th September that practice paid off. On the Saturday a Hurricane nose-dived into the ground, killing its pilot instantly. The incident happened off-field, and no one else was involved.

Two members of the team who witnessed the incident informed Control, who put everyone on high alert. The emergency channel sprang into use. The pre-prepared messages and procedure for Incident Off Field was broadcast, and acknowledgements sought from all on that net. This resulted in all access and departure gates being closed, all senior safety and administrative personnel being briefed, the PA Caravan being informed, and members of the public kept aware of the situation.

Shortly after the accident, Spitfires flew a 'man missing' flypast in tribute to the downed pilot.

OPERATIONAL NEWS - VK4FUQ

VK2BPL has supplied provisional results of the 2007 Westlakes Cup.

VK2ATZ has declared itself Ineligible to qualify for a place in the results. This is in the Spirit of the Contest.

1st Place Full and Standard Calls VK2AEA 37 points
2nd Place Full and Standard Calls VK3ZPF 36 points
Equal Second VK2VV 36 points
3rd Place Full and Standard Calls VK2OJ 33 points

1st Place Foundation Calls VK2FWAZ 39 points
2nd Place Foundation Calls VK2FBRK 35 points
3rd Place Foundation Calls VK3FIDX 33 points

These results are based on the Claimed Scores recorded at the end of the Contest and will be ratified on receipt of Log Sheets

An estimated 40 to 50 stations took part in the Contest and monitoring stations reported no departure from the rules and spirit of the contest.

SARL CONTEST MANUAL

The SARL Contest Manual is to be reviewed for use during 2008. The contest manager for the SARL takes comments and suggestions from members and clubs on the various contests as well as suggestions for any new contests to be included.

This is for SARL as well as Club contests.

A great idea... is the WIA contest Manager tuned in today? HiHi

Peter Parker VK3YE on the QRP reflector has posted a great summary of his travels thru VK6 working QRP.

His observations from GERALDTON are worth noting.

Good local activity on 160m on 1840 SSB in the evenings, especially from stations around Bunbury. Contacts up to 550km were made with 4w from Geraldton despite the makeshift antenna.

Good 80m results to the south west during the day (attribute this to the over-water path from Geraldton and the low sunspots).

40m within VK6 is currently very poor (for distances up to 500km). At further distances it would be OK (see later).

A highlight was working VK6KGQ. Lewis was running a 1w DSB kit transceiver. Signals up to 55 over the 700km path from Kalgoorlie.

DX worked included W4GF on 30m & 8N0CLE on 40m. There is some YB CW activity on 160m but couldn't make contact.

Eastern states contacts from Geraldton included VK3OM SSB on 20m, VK3IM CW on 40m, VK4VFX on 80m & VK3XU on 80m.

Peter then moved on to the township of DOODLAKINE

Did listening tests to experience the RF quiet location. People in towns and cities don't know what they're missing until they go to places like this with zero noise.

VK6ADI CW beacon (3.686 MHz) at Beverley (?) was strong during the day. Apparently QRP but didn't know how low.

40m was amazing. During the middle of the day (noon - 2pm EAST) SSB stations from VK2, 3, 4, 5 & 7 were audible from over 2500km away, with some 'armchair copy'.

This proves that DX propagation in sunspot minima years can be good but to take full advantage of it on the lower bands you need an RF quiet location as even s3 noise will smother many signals.

73, Peter.

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- INTERNET --- THE HAMS DOMAIN

North West Tasmanian Amateur Radio Interest Group's Packet BBS (VK7NW) has been enhanced with a new facility, enabling reading of bulletins by Web Access

The last 500 Bulletins can be read by accessing a special Web Page running Java Script. Bulletins can be read by 4 sorting methods, by Date / Time, route designator, Topic or sender's call.

Both EchoIRLP Nodes 6124 & 6616 can be monitored by remote Web Access. Their current status, most recent connected nodes incoming & outgoing both IRLP and EchoLink connected stations can be monitored using some new facilities associated with these nodes.

The Local DTMF access codes have been completely updated and node users can now access on demand, local status, nightly broadcast news replays, Weather Reports, Voicemail, Random node Call, just to name a few.

All these "U BEAUT" facilities and the links for access can be found at the web addresses on the email and internet editions of this broadcast.

SOCIAL SCENE

OCTOBER 6
Gold Coast Amateur Radio Society Annual Hamfest at Albert Waterways Hall.

October 14
Annual inter-club BBQ in central Victoria.

Members of the Central Goldfields Amateur Radio Club of Maryborough, Midland Amateur Club from Bendigo, the Ballarat Amateur Radio Group and Amateur Radio Victoria will attend this event at Laanacoorie next month.

Organiser Peter Rafferty VK3CC explains that it's a BYO meat and drinks affair, with bread, butter, tea, coffee provided.

Apart from being a really great social occasion, last year's BBQ resulted in the cooperative venture - the Centre Victoria RadioFest at Kyneton.

The BBQ will be at the Laanacoorie Hall, the date Sunday the 14th of October starting at 10am.

Laanacoorie is on the Loddon River on the Eddington side of Bendigo about one third of the way between Maryborough and Bendigo.

OCTOBER 27-28
The Wagga Amateur Radio Club is this year's host for the Riverina Field Day.

The Field Day is being held on the 27th and 28th of October. So please pencil the date into your calendar.

The venue is again the clubhouse in Small St. The usual flea markets, Trade and other displays will run continuously in the hall from 9am on Sunday.

There will be a Field Day dinner to mark the opening and will be held at Clubrooms on the Saturday evening. It will take the form of a smorgasbord. Bookings are essential.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

FEBRUARY 10

Announcing Centre Victoria RadioFest No. 2.
Second-hand traders, club corner, short-talk lectures, displays and the popular dipole factory will all return, plus some new exciting activities to be announced later.
All major commercial traders have already made commitments to be there again in 2008.
For second hand table bookings that cost only $12.50 please contact Nick Angelo VK3UCK 0488 653 201, or check out the website radiofest.amateurradio.com.au

Sept 13 Alarameet 2008 will be held in Ulverstone Tasmania on Saturday 13th and Sunday 14th September 2008. Susan VK7LUV for details.

2009
International Telecommunication Union's Telecom World 2009.

14th IARU R3 Conference Christchurch 12 - 16 October, 2009.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 30 SEPTEMBER 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

Your news reader this morning is Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEY

It is with deep regret that we have to announce the passing of Tony Cartwright, ZS6BKO, on 22 September 2007 after a long illness. We extend our condolences to his wife Cory, family and many friends.

(PAUSE)

In the news today:

CLUBS TO ADMINISTER ZU EXAMS

SA AMSAT SPACE SYMPOSIUM POSTPONED TILL NEXT YEAR

INTECNET AND PRESIDENT'S NET NEXT WEEKEND

LEARNERS TO TALK WITH MARK SHUTTLEWORTH

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

CLUBS TO ADMINISTER ZU EXAMS

The SARL is pleased to announce that the SARL has finalised the arrangement for affiliated clubs to offer the class B examination for their students. The new arrangement mean that Class B examinations can be conducted at any time of the year in addition to the national examinations held in May and October.

The procedure to be followed is in its final preparation stage and will be discussed during next Sunday's President's net. The necessary documentation will also be available on the members section of the web from next Sunday.

SA AMSAT SPACE SYMPOSIUM POSTPONED TILL NEXT YEAR

SA AMSAT has postponed its Space Symposium till next year. The organisation made that decision in view of the lack of support for the event. When questioned, many would be delegates said that there are too many other events during this time of the year. On October 6 alone there are two other club meetings and flea markets in the Gauteng area with more meetings either side of the date.

The SA AMSAT committee will review alternative dates and make a further announcement soon.

INTECNET AND PRESIDENT'S NET NEXT WEEKEND

The President's net will be held next Sunday 7 October starting at 19:00 and will be followed by the Intecnet.

SARL President, Graham Hartlett, will talk about plans for the 2008 AGM and nominations for Council which are due soon.

The Intecnet will feature a discussion on the HMO/SAR 40 metre beacon Programme led by Dr Lee-Anne McKinnell of the HMO. John Willescroft, ZS6EF, who is constructing the beacon equipment, will discuss the design and operational issues. A PowerPoint presentation will be available on the web from later this week. Visit www.sarl.org.za and click on ARMI.

Clubs wishing to link their repeaters should send details of the telephone number to armi@sarl.org.za by Saturday 6 October.

SPECIAL EVENT STATION CELEBRATES LAUNCH OF SPUTNIK 1

The Boland Amateur Radio Club will celebrate the launch of the world first satellite, Sputnik 1, with a special event station operating from the satellite ground control centre of the University of Stellenbosch over the weekend of 6 and 7 October.

Sputnik was the world's first satellite launched by the Russians 50 years ago on 4 October 1957. South Africa's first satellite SunSat OSCAR 35 was launched on 23 February 1999, a few months over 42 years later. Both events were however significant. Sputnik 1 showed the world that the science fiction writings of several authors were not so much fiction and SUNSAT showed what determination can achieve.

The station will be active on HF and VHF and use the callsign ZS50SPUT. A commemorative QSL card will be mailed to all stations that send a confirmation to P O Box 273, Strand 7140. Please enclose a DL size stamped self addressed envelope.

Members of the Boland Amateur Radio Club will be operating the special event station throughout October

LEARNERS TO TALK WITH MARK SHUTTLEWORTH

Learners from various parts of South Africa will talk to Mark Shuttleworth on Wednesday 10 October. Learners were selected from an essay competition entries. There are still 2 days left for individual entries. Visit www.sarl.org.za for details. The best entry will win the writer a laptop computer.

SARL PRESIDENT ADDRESSED FET TEACHERS

Graham Hartlett, ZS6GJH, addressed a group of teachers who attended a training course at the Ekurhuleni College for Further Education and Training arranged by the Department of Communications. The objective of the course is to train teachers to take amateur radio into their colleges.

He cited amateur radio not just as a fun activity, but an activity that has a positive outcome on the further training of young people in the Science, Engineering and Technology disciplines.

Further Education and Training (FET) colleges strive to provide high-quality education and training to help learners equip themselves with the qualifications and skills needed to start out on a chosen career path. "Amateur Radio can make a valuable contribution in this career choice and in addition teach basic technical and communication skills that will equip young people to render services to their community such as disaster communication and communication during large sporting events.

SARL 80 METRE QSO PARTY

The second leg of the SARL 80 metre QSO Party will be run on Thursday 4 October, starting at 19:00 CAT and ending 3 hours later. It is a phone only contest on the segment 3,603 to 3,700 MHz. The exchange is your call sign, a RS report and a serial number starting at 001. The complete rules can be found in the 2007 SARL Contest Manual.

LOCAL HF FREQENCIES ARE UNSTABLE TO DEPRESSED Spaceweather.co.za reports that the solar wind speed has reached 575 km/s, with the Bz component of the interplanetary magnetic field northwards which means that the earth's magnetosphere offers maximum protection from solar winds.

Geomagnetic conditions are at active levels. Local HF working frequencies are unstable to depressed. The outlook for this week is that a coronal hole on the solar disk has rotated into a geo-effective position and that more disturbed HF conditions can be expected. The sun has been blank for 21 consecutive days, but yesterday a new sunspot was emerging. Locally 40 metres should provide a good path between Cape Town and Pretoria for most of the day from around 6 am but trailing off fast after 6pm when 80 metres becomes a viable proposition. For the

Durban - Pretoria path 40 metres will open a little later around 8 am and also trail of by the late afternoon. 80 metres is a good option on both paths during the evenings but best between 18:00 and 22 hours. Cape Town to Durban offers similar openings as for the Durban to Pretoria path. DX wise between 16:00 and 20:00 CAT first 15 metres will open for a short while and then 20 metres both to the East coast and short path to the West Coast of the USA.

DIARY OF EVENTS

30 September - Last day for comments on SARL study guide; 4 October - SARL 80 metre QSO Party; 4 - 10 October - Special space programme; 5 October - Take your handheld to work day; 6 October East Rand Flea market and AGM; 6 October - SAATI AGM; 6 - 7 October - Special station ZS50SPUT on the air; 7 October - President's Net and Intechnet; 18 October - Class A RAE; 20 October - Comments on SARL 2008 Competition Handbook to be in.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by George, ZS6NE, and transmitted by (your name and call sign).

Thank you for listening. 73.

/EX

Unfortunately, that doesn't meet the FCC requirements for identification.

From 97.119:

(b) The call sign must be transmitted with an emission authorized for
the transmitting channel *in one of the following ways*:
(1) By a CW emission. When keyed by an automatic device used only for
identification, the speed must not exceed 20 words per minute;
(2) By a phone emission in the English language. Use of a standard
phonetic alphabet as an aid for correct station identification is
encouraged;
(3) By a RTTY emission using a specified digital code when all or part
of the communications are transmitted by a RTTY or data emission;
(4) By an image emission conforming to the applicable transmission
standards, either color or monochrome, of ï¿½73.682(a) of the FCC Rules
when all or part of the communications are transmitted in the same image
emission.

Maybe you could teach the router CW . . . or RTTY . . .

i rather suspect your quote is outdated or incomplete PSK-31 signal
are ided in psk-31 Hell is hell pactor in pactor

why would a wifi signal be any different

The strict reading you're making of 97.119 would also appear to make illegal almost all AX.25 packet radio systems, as well as PSK31, Olivia, MFSK, and the other sound-card modulations... since none of these identify via either CW, or via "RTTY" in the classic meaning of the term (i.e. FSK modulation using Baudot code). Rather, the callsign is transmitted via the same modulation scheme as the rest of the textual traffic being carried.

I believe that the FCC has a broader view of the issue, in that they use the phrase "RTTY emission using a specified digital code". If one interprets this as meaning "a transmission of alphanumeric characters, using a digital code whose details are publicized", then this covers both the "modified 802.11 access point" (since the callsign is transmitted as part of an ASCII string, sent via one of the standardized and well-published 802.11 modulations) and all of the packet and sound-card modes.

If the FCC were of a mind to interpret the rules to require that the ID'ing be done either in CW, or in "classic" RTTY, I believe that they

would have done so decades ago when AX.25 over AFSK modulations first became popular, or more recently when PSK31 and MFSK and etc. came into use. I've not heard or read any hint that they intend to do so.

If you're using some sort of _experimental_ digital code, or an exotic modulation scheme which has not yet been publicized, then you'd need to identify in CW or in a published digital code to stay legal. I believe that at least one of the sound-card modulation systems can embed a narrow-bandwidth CW ID inside the wider-bandwidth signal, so that casual listeners using SSB receivers can hear the ID... a neat and courteous trick.

Every packet TNC I've ever used has the option to set the station callsign
to identify in CW. I belive it's a requirement to do so every 15 minutes
here in the UK but it's been a while since I operated on packet so it may
have changed. I notice a few voice repeaters have a voice ID mode now,
although they still ID in CW as well.

1 GB2RS NEWS Sunday 30 September

The news headlines

* 3B7C operation extended

* HF Convention draws closer

* Bell Hill 10GHz beacon transmits new mode

The successful 3B7C DXpedition was extended for a day beyond its initial target. Operations were finally closed down at 0331z on Tuesday 25 September. The group managed a grand total of 135,718 QSOs, making it the third most-worked DXpedition of all time. Like 3B7C, the two most worked DXpeditions, D68C and 3B9C, were all operated by the Five Star DXers Association. Congratulations to all those involved.

The RSGB HF Convention is drawing closer. This premier event, sponsored by Icom and Martin Lynch and Sons, takes place from 12 to 14 October. This year the Convention is at its new home, the Wyboston Lakes conference centre in Bedfordshire. Highlights of this year's convention will include a major talk on 3B7C by members of the team plus trophy presentations, lectures, learning experiences and demonstrations. Full details of the RSGB HF Convention can be found online at www.rsgb.org/hfc and more information can also be obtained from the booking line on 0870 904 7379.

The 10GHz beacon GB3SCX at Bell Hill, Dorset, has started transmitting a new mode. In addition to its normal CW ident, it is now sending Dual Frequency CW with ident, DFCWi. Dots and dashes are made the same length, but transmitted on different frequencies. A third tone is used to indicate the gaps between the dots and dashes. The new mode is intended to be easily seen on waterfall displays like Spectrum Lab, but can be decoded by ear. For more details log onto www.scrbg.org/g4jnt/.

Icom has launched a new website to support and provide information on D-STAR. The site contains sections about the history, features and technical matters regarding D-STAR. There is also a UK forum. For more information log onto www.d-staruk.co.uk/.

The European Commission has guaranteed funding for the European satellite radio navigation programmes, EGNOS and Galileo. The move means that the deployment phase of Galileo will be funded entirely from the Community budget. Galileo transmit frequencies include 1260 to 1300MHz and concerns have been expressed about mutual interference with the 23cm band and CAA radars.

And now for the details of rallies and events for the coming week [Note to newsreaders: Please use your judgement on whether to read the 30 September event, based on your time slot and distance from the event.] On 30 September the Telford Hamfest takes place at the Enginuity Museum, Coalbrookdale, Telford. Doors open at 10 am. For more information contact Martyn, G3UKV, on 01952 255416, or email ukv@ukv.me.uk.

2 On 7 October Nantwich Bunker Trust are having a surplus electronic and electrical sale. The sale starts at 1000 at French Lane, Nantwich, Cheshire. For more information log onto www.hackgreen.co.uk/. More details of these and future events can be found on pages 88 and 89 of the October edition of RadCom. Now for the news of special events The Singapore Amateur Radio Transmitting Society, SARTS, will be operating special event station S61FD on their Field Day on 6 and 7 October. They will be operating from Changi, Singapore. Operation will be on the HF bands 80 to 10m running 500 Watts to vertical antennas. John Howard, G0BUV, will be operating special event call sign GB8CMC from Birmingham until 9 October. The event is celebrating the 800th anniversary of the Coleshill Market Charter. The Charter was awarded by King John in 1207. Warrington Amateur Radio Club will be celebrating its 60th anniversary year by operating the special call sign GB6WRS throughout the month of October. The station will be active on all bands each day of the month. The Border Amateur Radio Society is planning a special event using call signs GS0BRS and GX0BRS until 29 December. Club activity will be on HF and VHF. For club members both north and south of the border a special QSL will be available. For more details contact Ray Evans, GM0CDV, on 01573 228 730. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Andrew, G7COD, will be operating using 8Q7AK from the Island of Embudu, Maldives from 30 September to October 12. He will be using SSB with a little CW on 30 to 12 metre bands. For more information check 8Q7AK on QRZ.COM. George, AA7JV (VK2NU) and Tomi, HA7RY, plan to be active as VK9WWI from the Willis Islands (OC-007) until 4 October, depending on weather.

P29VLR is the call sign issued to CT1AGF for the IOTA operations from Papua New Guinea. This is the call SM6CVX, G3KHZ and G4EDG will be using from Kilinalau Island on 8 October for three days. QSL via SM6CVX. Now the contest news The RSGB Contest Committee has organised two new sprint contests. The sprint format requires stations to QSY often, and not maintain a run frequency. That means that different skills and operating styles are needed compared with a traditional contest. The contests will be held on Wednesday 3 October for the CW event on 3.520 to 3.570MHz from 1900 to 2030 UTC. The second contest will be held on Wednesday 10 October for the SSB event on 3.600 to 3.650MHz from 1900 to 2030 UTC. The exchange consists of callsigns, serial number, and the operator's name or nickname. Full details, including the important QSY element, can be found at www.rsgbhfcc.org. The PSK Rumble Contest takes place on 6 October from 0000 to 2359 on the 1.8 to 50MHz bands on PSK mode. The exchange takes the form of name

and DX Prefix.

3 The Oceania DX Contest takes place from 0800 on 6 October to 0800 on 7 October on the 1.8 to 28MHz bands on SSB. The exchange takes the form of RS and serial number. The EU Sprint Contest takes place on 6 October from 1600 to 1959 on the 3.5, 7 and 14MHz bands on SSB. The exchange takes the form of both callsigns, SN, name and nickname. The RSGB 144MHz activity and Club Championship takes place on 2 October from 2000 to 2230 local on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 432MHz to 248GHz Contest takes place from 1400 on 6 October to 1400 on 7 October on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 1.3 and 2.3GHz trophies Contest takes place on 6 October from 1400 to 2200 on all modes. The exchange takes the form of RST, serial number and locator. Now the solar factual data for the period from 17 September to 23 September, compiled by Neil Clarke, G0CAS Once again solar activity was very low with no solar flares of any description taking place. Solar flux levels were steady at 67 units until the 23rd when 66 was recorded. The average was 67. The 90 day solar flux average on the 23rd was the same level as last week at 70 units. X-ray flux levels remained below the minimum A1 level throughout. Geomagnetic activity was very quiet at first, for example, on the 17th the Ap index was only 2 units. Activity increased on the 20th due to a recurring coronal hole, this disturbance was still on going on the 23rd. However, the Bz has been mostly northwards resulting in very little geomagnetic activity taking place. The most disturbed day was the 23rd with an Ap of 15 units. The average was Ap 8 units. The ACE spacecraft saw solar wind speeds increase from 310 kilometres per second to 730 by the 23rd. Particle densities were low except for the 20th and the 21st which increased to 20 and 15 particles per cubic centimetre respectively. Bz varied little at first during the quiet days and between minus 9 and plus 7 nanoTeslas during the disturbance. Propagation on the higher HF bands remained poor, though the St Brandon expedition was again worked on all bands except 6 metres. From the 20th onwards high-latitude paths were adversely affected by geomagnetic activity. On 3.5 and 7MHz, though, early risers with well-equipped stations could work into New Zealand. Geomagnetic disturbance brought a handful of auroral reports on the 20th but all came from high latitudes. There were occasional reports of sporadic-E up to 50MHz. And finally the solar forecast. This week solar activity is expected to continue at very low levels. Solar flux levels are expected to be in the high 60's for most of the week. Geomagnetic activity should start at elevated levels due to recurring coronal hole. However, by midweek activity should decline to very quiet levels. MUFs during daylight hours at equal latitudes are expected to be about 19MHz for the south and 16MHz for the north. The darkness hour lows should be around 8MHz. Paths this week to India should have a maximum usable frequency with a 50 per cent success rate of about 23MHz. The optimum working frequency with a 90 per cent success rate will be around 17MHz. The best time to try this path will be between 0800 and 1400 hours UTC. And that's all for this week from the propagation team.

4 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

and EAST ANGLIA On Monday 1 October Burnham Beeches Radio Club is screening the Secret War video. Contact G4XDU, on 01628625720.

On Monday 1 October Southdown Amateur Radio Society is having a visit to Harvey's Brewery at Lewes. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Monday 1 October Surrey Radio Contact Club is having its autumn surplus equipment sale. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 2 October Chelmsford Amateur Radio Society is having its AGM followed by a talk on how to use Echolink. Contact Martyn, G1EFL, on 01245 469 008.

On Tuesday 2 October Horndean and District Amateur Radio Club is having a social evening. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Tuesday 2 October Leiston Amateur Radio Club is having a talk by Sam Jewell, G4DDK, on what the microwave bands have to offer. Contact Dave, G4HUP, on 01473 737 717, g4hup@btinternet.com.

On Tuesday 2 October Stevenage and District Amateur Radio Society is having a VHF operating night. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 3 October Chesham and District Amateur Radio Society is having a general meeting. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 3 October Dover Radio Club is having an operating night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 3 October Fareham and District Amateur Radio Club is operating the club station with G3VEF and G8KGI. Contact Ken, M0KLS, on 02392 797 240.

On Wednesday 3 October Havering and District Amateur Radio Club is having its Q3 business review meeting. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 3 October Norfolk Amateur Radio Club is having a talk on sunspots by Stuart, G7KBF. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 3 October Southdown Amateur Radio Society is operating at the Halisham shack. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Wednesday 3 October Worthing and District Amateur Radio Club is going back to basics. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 4 October Colchester Radio Amateurs meet for the AGM at the Colchester Institute. Contact Kevan, 2E0WMG, by email to colchesterradioamateurs@hotmail.co.uk or on 07766543784.

5 On Thursday 4 October Cray Valley Radio Society is having a talk on EMC in the shack by G3SPJ. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 4 October Horsham Amateur Radio Club is having a junk sale. Details on the web at www.harc.org.uk.

On Thursday 4 October Maidenhead and District Amateur Radio Club is having a talk on radio astronomy by Geoff Cottrell, G3XGC. Contact John, G8RYW, on 01628 628 463, or by email to g8ryw@tesco.net.

On Thursday 4 October Shefford and District Amateur Radio Society is planning for CQWW. Contact David, G8UOD, on 01234 742 757.

On Friday 5 October Cambridge and District Amateur Radio Club is discussing members' shacks. Contact David, G8JKV.

On Friday 5 October Crystal Palace Radio and Electronics Club is having its home construction competition. Contact Bob, G3OOU, on 01737 552 170.

On Friday 5 October Mid-Sussex Amateur Radio Society is having a talk. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 5 October Wey Valley Amateur Radio Group is having a talk by Roger Western, G3SXW, entitled "More DXing adventures". Details on the web at www.weyvalleyarg.org.uk.

NEWS FOR THE SOUTH-WEST On Wednesday 3 October Cornish Radio Amateur Club is having a talk by Bob, G4EIK, on the design and construction of a QRP CW transceiver. Contact Ian, 01872 561 058.

On Wednesday 3 October Exmouth Amateur Radio Club is having a talk on computer interfacing by Dean, G0UIL. Contact g0uil@eclipse.co.uk.

On Wednesday 3 October South Bristol Amateur Radio Club is having a technical matters meeting. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 3 October Taunton and District Amateur Radio Club is having its AGM. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 3 October Thornbury and South Gloucestershire Amateur Radio Club is having a talk on alternative energy in the home. Contact

Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Wednesday 3 October Trowbridge and District Amateur Radio Club is having short talks by club members Mike Adams, M0ALW, on Geocaching, followed by Jan Verduyn, G0BBL, with an introduction to DSP software. Contact Ian, G0GRI, on 01225 864 698, E/W.

On Thursday 4 October Saltash and District Amateur Radio Club is having its annual junk sale. Contact Brian, M0BHG, on 01752 844 321.

On Thursday 4 October Swindon and District Amateur Radio Club is having a talk entitled "Morse etc" by Colin Potter, M0DDT. Contact Mike, M5CBS, on 01793 826 465.

6 NEWS FOR THE MIDLANDS On Sunday 30 September Wythall Radio Club is taking part in Lord Pettitt's shooting competition. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Monday 1 October Gloucester Amateur Radio and Electronics Society is having a talk on virtual radio by Cliff, G8CQZ. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Tuesday 2 October Derby and District Amateur Radio Society is having a junk sale. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 2 October Loughborough and District Amateur Radio Club is having an open forum on test and measurement. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 2 October Wythall Radio Club is taking part in the 2m club championship from the shack. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 3 October Telford and District Amateur Radio Society is on the air and having an open house. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 4 October Salop Amateur Radio Society is having a calibration night with G8DIR. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 5 October Hucknall Rolls-Royce Amateur Radio Club is having an HF on the air night. Details on the web at www.hrrarc.com.

NEWS FOR THE NORTH OF ENGLAND

A new amateur radio club is being formed for the Bolton area. The inaugural meeting of the Bolton Wireless Club takes place at the Technical and Innovation Centre, Minerva Road, Bolton on the evening of Tuesday 2 October. For more information please contact Ernie, G4YYB, on 07882 158 730, or by email to g4yyb@ntlworld.com.

On Monday 1 October Sheffield Amateur Radio Club is having an open table meeting and HF & satellite operating night. Contact Trevor,

M0TWS.

On Monday 1 October Thornton Cleveleys Amateur Radio Society Club is on the air. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 2 October Chester and District Radio Society is having a surplus sale. Details on the web at www.chesterdars.org.uk, or my email to info@chesterdars.org.uk.

On Tuesday 2 October Stockport Radio Society is having a video evening, watching the 3YOX Peter Island DXpedition video. Contact David, M1ANT, on 0161 456 7832.

On Tuesday 2 October Wakefield and District Amateur Radio Society is on the air. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Wednesday 3 October Denby Dale Amateur Radio Society is having a surplus sale. Contact David, G6OCD, on 0700 5947317, or by email to david.g6ocd@ntlworld.com.

On Wednesday 3 October Great Lumley Amateur Radio and Electronics Society is preparing for its rally. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

7 On Wednesday 3 October Mid-Cheshire Amateur Radio Society is having a talk on the design of linear amplifiers by Steve, G0DQQ. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Thursday 4 October Grimsby Amateur Radio Society is having its AGM. Contact Brian, G4DXB, on 01472 231 383.

On Friday 5 October South Manchester Radio and Computer Club is having a computer clinic with Dave, G4UGM. Contact Ron, on 0161 969 3999.

On Friday 5 October Tynemouth Radio Club is inviting its members to 'get knotted'. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Friday 5 October the Border Amateur Radio Society is having its AGM at the St John Ambulance Hall, 8 Tweed Street, Berwick on Tweed. Contact Ray, GM0CDV, on 01573 228730.

On Saturday 6 October Wakefield and District Amateur Radio Society is running its Foundation Licence course. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

NEWS FOR SCOTLAND

The RSGB's Train the Trainers scheme continues to help tutors enhance the standard of their Foundation, Intermediate and Advanced licence courses. On Sunday 21 October another in the series will take place in Motherwell. Alan Betts, G0HIQ, and Brian Reay, G8OSN, will be presenting the course, which takes a full day and is free of charge to

Instructors. For more information, and to register, contact RSGB Region 1 Manager Gordon Hunter, GM3ULP, on 01698 253394 or by email to gm3ulp@aol.com. Demand is expected to be high, so it is important to register as soon as possible.

On Monday 1 October West of Scotland Amateur Radio Society Club is entering the SSB NFD. Details on the web at www.wosars.org.

On Wednesday 3 October Paisley (YMCA) Amateur Radio Club is taking part in the UHF National Field Day. Contact Jim, GM3UWX.

On Thursday 4 October Aberdeen Amateur Radio Society is having a Junk Sale. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Thursday 4 October Moray Firth Amateur Radio Society is having a construction evening for VHF antennas. Contact Jim, MM0SMD, on 01340 820 134.

On Friday 5 October the Border Amateur Radio Society is having its AGM at the St John Ambulance Hall, 8 Tweed Street, Berwick on Tweed. Contact Ray, GM0CDV, on 01573 228730.

On Friday 5 October Cockenzie and Port Seton Amateur Radio Club is having a club night. Contact Bob, GM4UYZ, on 01875 811 723.

On Friday 5 October West Of Scotland Amateur Radio Society is having a talk on software defined radio by GM6OQN. Details on the web at www.wosars.org.

On Sunday 7 October Cockenzie and Port Seton Amateur Radio Club is taking part in the RSGB 21/28MHz contest. Contact Bob, GM4UYZ, on 01875 811 723.

8

NEWS FOR WALES On Tuesday 2 October Carmarthen Amateur Radio Society is having a club meeting. Contact Les, GW8PSJ, on 01239 811 922.

NEWS FOR NORTHERN IRELAND

On Thursday 4 October Bangor and District Amateur Radio Club is having a talk on the IRTS Swaziland DXpedition by Pete, GI4VIV. Contact Mike, GI4XSF, on 028 4277 2 383.

And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

>i rather suspect your quote is outdated or incomplete PSK-31 signal
>are ided in psk-31 Hell is hell pactor in pactor

>why would a wifi signal be any different

I presume by "hell," you mean "Hellschreiber:"

http://en.wikipedia.org/wiki/Hellschreiber

I believe that Mark may be correct on this point. The excellent link
to the K5YFW article at the ARRL TIS site given previously:

http://www.arrl.org/tis/info/HTML/high-speed-digital/emergency-communications.html

is unfortunately silent on the topic. However, one could argue that if there was an FCC requirement to provide additional identification other than the WiFi mode, the article would have mentioned it. Also, searching the web for "spread spectrum identification requirements" finds references to narrowband (i.e., CW) identification requirements in 97.119b(5), which appears to have been deleted in the current version of FCC Part 97. In fact, it was explicitly deleted in 1999 as a result of FCC Docket 97-12 and RM-8737:

ftp://ftp.tapr.org/ss/fcc99234.pdf

Quoting the above document:

"With respect to the station identification requirement, we will revise the rule as TAPR requests because we find that Section 97.119(b)(5) of the Commission's rules is unclear and also duplicates Sections 97.119(b)(1) and (2). [64] Stations transmitting SS emission types can identify themselves using the methods specified in either of these sections."

[...]

Identification for WiFi appears to be reasonably covered under 97.119b(3) above, which is from the current version of FCC Part 97:

http://www.arrl.org/FandES/field/regulations/news/part97/

The other relevant sections of Part 97 that appear to support this view include 97.113:

http://www.arrl.org/FandES/field/regulations/news/part97/b.html#113

97.305:

http://www.arrl.org/FandES/field/regulations/news/part97/d-305.html#305

97.309:

http://www.arrl.org/FandES/field/regulations/news/part97/d-305.html#309

and 97.311:

http://www.arrl.org/FandES/field/regulations/news/part97/d-305.html#311

the gist of which seems to be that RTTY or data emissions may be used for identification, and the permissible RTTY or data emissions include any "unspecified digital code". Other restrictions for WiFi appear to be that the communications via spread spectrum or other "unspecified digital code" must be only with U.S. stations, or stations in countries that authorize spread spectrum or other "unspecified digital code" communications for amateurs, be on bands authorized for spread-spectrum (i.e., high UHF/microwave and up), not be "encoded for the purpose of obscuring their meaning (e.g., encryption such as WEP or WPA), have technical parameters that have been publicly documented, and meet specified power limits.

Many TNC2 clones do not have a cw ident facility, depending on what software
version they have installed.

Also in the UK it is no longer a requirement to id in morse, the new licence
regulations now say:

"by the same type of transmission that is being used for the communication"

Irish Radio Transmitters Society
Radio News Bulletin

Sunday September 30th 2007

CQIR (Sundays news readers only)

A large station is in operation for the Press in the Phoenix Park and EI75IRTS will be QRV during the contest promoting the event worldwide. Low frequency operation for EI75IRTS is from the EI7M site in Cork. The first Irish entry pulled from the draw will win an all expenses long weekend for two in New York. You get a free entry for every 75 QSO's made. This is a showcase event for the Society and, as always, good operating practice, friendliness and courtesy to other users of the spectrum should be the order of the day.

EI0MAR is also QRV for CQIR today from the Vintage Radio Museum in Howth • visitors are welcome.

Tipperary Amateur Radio Group

The next meeting of the Tipperary Amateur Radio Group will be held on Thursday next, the 4th of October in Raheen House Hotel Raheen Road, Clonmel at 8.00 p.m. All are welcome.

Kerry Amateur Radio Group

The Kerry Amateur Radio Group will hold its annual general meeting on Saturday the 6th of October 2007 at 10 a.m. in the Muckross House Coffee Shop, Killarney. The annual election of officers will take place, and the following incumbents have been nominated: Ron Hahn, EI2JP, Chairman & Treasurer, John Costello, EI9ESB, Vice Chairman Billy O'Connor, EI7CQB, Hon. Secretary.

After the AGM, there will be a more general discussion regarding the Group's activities and direction for 2007/2008. All members are requested to attend, and new members are always welcome.

Limerick Radio Club

The next meeting of Limerick Radio Club will take place on Thursday the 11th of October at the usual venue, the Limerick Institute of Technology, Moylish at 19:30 hrs local time. All those interested are welcome to attend.

Dxpedition to St. Brandon

The Five Star DXers Association DXpedition to St. Brandon finished on Tuesday last, with over 137,000 QSO's in the 3B7C log. Paul EI5DI was among the operators, and this provided an added interest for EI stations. The 3B7C log includes almost 90 EI call signs and over 60 MI/GI call signs.

This has been one of the biggest DXpeditions (in terms of QSO totals) in recent times. No doubt, full details of the team's achievements will be publicised over the next few months. A quick look at the details that have been published suggest that European stations dominate the log.

Winlink and APRS

John, EI7IG, is experimenting/testing a Winlink Telpac Node in the Waterford area. The frequency in use is 439.875 MHz and the callsign is EI3RCW-10. If anyone is interested in participating, please contact him directly at 086-8167310.

Experiments in APRS are ongoing around the southeast on two metres using 144.800 MHz. A number of experimental digipeaters and Igates are in operation. The WX station EI2WRC is also using this frequency. For more information on APRS visit www.aprs.org.

Marconi Clifden Celebrations

On the 17th of October 1907 Guglielmo Marconi sent his first commercial message from the then new station at Clifden, Ireland. This October in celebration of this historic event members of the Galway Radio Experimenters Club will be running a special event station from Saturday 13th to Wednesday 17th from Clifden. The club has been issued the call sign EI100MFT for the event, MFT been the last call sign used on the original station.

On the Wednesday they will be making a special linkup with the Marconi sister station in Glace Bay, Nova

Scotia. Part of this linkup will be an exchange of greetings between President Mary McAleese and Lieutenant Governor of Nova Scotia the Honourable Mayann E. Francis. The group will also be honoured to have Princess Electra Marconi present as she is coming to Clifden for the festival along with an Exhibit from the Marconi Foundation in Bologna. The Galway Radio Experimenters Club will also be presenting a display of vintage equipment. More details on the festival can be found at www.clifden.ie. Visitors to the station are more than welcome and if you would like to participate this can also be arranged. For further information please contact Enda Broderick (II2II) on 086-8676410 or email: &#65533;enda dot Broderick at lightnet dot ie&#65533;.

3-Watt CW QSO

Tony EI5EM was on holidays recently in the Algarve and on the evening of the 16th of September was relaxing on the first floor balcony listening to 20 metres on his Elecraft KX1 QRP transceiver. Band conditions seemed good and the 25-foot antenna wire draped over the balcony with a 10-foot counterpoise seemed to be receiving well. The first station heard calling CQ was EI6IZ, Brendan in Mayo. More in hope than in expectation, Tony, operating as CT/EI5EM, replied to Brendan's call. Contact was made and reports exchanged. Tony's KX1 had an output power of 3 Watts. Taking this QRP level and the compromise antenna in use into consideration, Tony was pleased to receive a 519 report from Brendan and to give a 599 in return.

This CW QSO serves to prove what can be achieved on CW even at such low power levels and with an improvised antenna. Of course great credit must go to Brendan, EI6IZ for plucking Tony's weak signal out of the QRM and QRN to complete a really satisfying QSO.

Waterford Rally

The Waterford Radio and Electronics Rally will take place on Sunday the 21st of October at the Woodlands Hotel on the Dunmore Road in Waterford. South East Communications and Long Communications will be at the rally. The IRTS, AREN and a bring-and-buy stand will also feature.

Doors open at 11 a.m. and admission is 5 Euro, accompanied children are admitted free of charge. For details including a directions map, visit the South

Eastern Amateur Radio Group web site on www.searg.com.

Upcoming Rallies

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Talk on TETRA Digital Radio

There will be a free talk on TETRA digital radio in Dublin on the Thursday the 11th of October at 6 p.m. TETRA radio is a new secure radio system currently being rolled out by the Gardai and is in use on the LUAS tram system in Dublin. This system which operates in the UHF band features mobile phone like dialling as well as group calling like most PMR analogue systems. It may be rolled out in the future for all emergency and public services. The talk will be held at Engineers Ireland, 22 Clyde Road, Ballsbridge, Dublin 4, which is beside the American Embassy.

Marconi Lectures

The first commercial transatlantic message was transmitted from Marconi's Station in Clifden to his North American complex in Glace Bay, Nova Scotia almost 100 years ago. Marconi's achievements will be celebrated with a series of Marconi Centenary commemorative events from October the 12th to the 17th in Clifden, coordinated by the Clifden Chamber of Commerce. The celebrations include a lecture by Paul Duffy, Chartered Engineer and historian, entitled "Marconi-The Engineering Marvel". This lecture will take place at the Clifden Station House Theatre on Sunday the 14th of October at 1 p.m. Michael Sexton, Chartered Engineer and author of "Marconi: The Irish Connection", will give a lecture on the national aspect of Marconi's work at the Clifden Station House Theatre on Monday the 15th of October at 1 p.m.

Professor Peter Kennedy will chair a forum entitled "Whither Wireless Communications? Marconi's Legacy in the 21st Century" on Tuesday the 16th of October at Clifden Station House Theatre. This forum will reflect

on Marconi's achievements and the future for wireless communications in an era of ubiquitous connectivity.

Amateur Radio Mailing List

An International Youth Mailing list has been established by Duncan MacLachlan KU�DM. The aim is to promote the hobby amongst Young Operators worldwide and forging friendships in the process. The list is already growing in popularity with a healthy number of subscribers.

If you are under 25 years of age and would like to join, send an email to Jonathan 2I0JVI describing your interests and anything else you think relevant to �mi3jvi at yahoo dot co dot uk�. Your details shall then be forwarded to Duncan.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to �news at irts dot ie� for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday�s bulletin.

At one time, CW identification was required for all data type amateur
emissions including RTTY. Indeed, MixW, the most popular sound-card
data program, still makes provision for this. Recent interpretations,
though, allow for ID using the mode of communication. During my
"reign", we (the San Francisco office of the FCC) at my urging
actually acquired a PK-232 TNC and the software to go with it!

I had heard that the SSID could be set with the callsign.

When we look at the purpose for ID'ing, the idea is to allow identity of a signal in case of a problem with it (bad signal, illegal operations, etc) If we were looking at a WI-fi type signal, one of the best ways to identify it would be by that SSID. If we had to use another method, then the person who is doing the identifying would have the unenviable task of listening for a CW signal at the end of all that computer party trash signal.

The reason for CW ID was that the FCC Field Engineers and Monitoring
Station techs could read the ID "off the air" because we were all
code-qualified. That was in the days before they had any decent
decoders/TNCs/computers. That was also the real reason for the long
delay in approving spread spectrum usage by amateurs. Once the
facilities had the equipment to read the ID in the format being used,
the restrictions were lifted.

How long until voice ID is required for CW signals?

How "well known" does the protocol have to be in order to qualify for this concept of using it to ID the signal? If I want to experiment with a protocol that is sufficiently different from what's being used that the FCC can't obtain commercial equipment to decode it, THEN do I need to ID it using a "known" protocol?

There's a bit of a lose/lose situation here. If the FCC is willing to accept ID using the experimental protocol, they've effectively removed the requirement to ID and cannot enforce the prohibition on encryption (since any unknown protocol looks like encryption). If they require an ID that they can decode, it precludes work with experimental protocols like spread spectrum and the type of experiment that started this thread (modifying a commercial product that isn't capable of CW id).

A few years back I did a modeling of an antenna that was 1/4 wavelength
long at I think 40 meters. The SWR of the antenna was approaching
infinite. If I get the chance, I'll model it again tonight - I'm doing
the mass mailing for the PAQSO party tonight, and if all goes well, I
should have a little time.

Yup, I tried a few dipoles that were longer, and made a Z shape. They
worked okay, but were a lot more maintenance. Lots of tree whipping in
storms here, and I almost made plastic pully's into the end insulators
to combat the extra movement. But I went back to the 96 foot length

I agree. What really surprised me was that the performance on 75 meters
was pretty acceptable. I mostly get down there during contests, and have
had nice results. Worked enough people to make it worthwhile.

> Are you using true ladder line, or "window line" (Twin Lead with

I use the window line. I have heard of the advantages of the true ladder line, and certainly the higher impedance is one of them. I've heard of some of the drawbacks of window line, such as it's performance when wet.

I did take issue with the test method cited by many, in which the window line was dunked in water that included a wetting agent. My contention is that the experiment showed the effects on window line with wetted line.

My experience has been that window line does not wet in this manner. When the experimenter has to add a chemical to coat the line with water, it is altering the conditions and producing results germane to only those conditions.

I wonder what would happen to open wire ladder line under those conditions?

For your listening and dancing pleasure, we present the golden tones
of Section 97.303 of the FCC Rules:

==
ï¿½97.309 RTTY and data emission codes.

(a) Where authorized by ï¿½ï¿½97.305(c) and 97.307(f) of this part, an
amateur station may transmit a RTTY or data emission using the
following specified digital codes:

(1) The 5-unit, start-stop, International Telegraph Alphabet No. 2,
code defined in ITU-T Recommendation F.1, Division C (commonly known
as ï¿½Baudotï¿½).

(2) The 7-unit code specified in ITU-R Recommendations M.476-5 and
M.625-3 (commonly known as ï¿½AMTORï¿½).

(3) The 7-unit, International Alphabet No. 5, code defined in IT--T
Recommendation T.50 (commonly known as ï¿½ASCIIï¿½).

(4) An amateur station transmitting a RTTY or data emission using a
digital code specified in this paragraph may use any technique whose
technical characteristics have been documented publicly, such as
CLOVER, G-TOR, or PacTOR, for the purpose of facilitating
communications.

(b) Where authorized by ï¿½ï¿½97.305(c) and 97.307(f) of this part, a
station may transmit a RTTY or data emission using an unspecified
digital code, except to a station in a country with which the United
States does not have an agreement permitting the code to be used. RTTY
and data emissions using unspecified digital codes must not be
transmitted for the purpose of obscuring the meaning of any
communication. When deemed necessary by a District Director to assure
compliance with the FCC Rules, a station must:

(1) Cease the transmission using the unspecified digital code;

(2) Restrict transmissions of any digital code to the extent
instructed;

(3) Maintain a record, convertible to the original information, of
all digital communications transmitted.

==
What it comes down to is if the ID can't be decoded, the station has
to be found the old fashioned way: DFing, and the operator confronted.
The harder it is to be found, the closer the scrutiny.

Don't tell that to the brass-pounders.

And CW is not dead in the Maritime Service, either. Just last month a new Manual Morse Maritime Public Coast Station was licensed by the FCC, making almost as many now as when RCA and Mackay/Globe ruled the airwaves. Indeed, some of them are resurrected "old" stations.

The main reason that I recommend a dipole over a vertical is that it is general purpose, and just doesn't take as long to put up and get going.

My first dipole was up and running in a day. Then I put up my vertical while I could operate. The vertical took a lot longer to install. I had to pour the concrete base, and running the ground wires was the sort of project that I put them in as long as my back could stand it, until I came up with my trenching method. The tuning of the antenna required several putitup takeitdowns. and 75 meters was very touchy - it still is too sharp tuning to take in the whole voice or CW sections. THe results are that I had two nice antennas, but the vertical is more of a specialized instrument, one that I switch to or from depending mostly on how far away the other Op is - but even then, conditions will change and one or the other antenna will operate better than the other at different times.

My experiments with both have allowed me to definitively state that between the dipole and the ground mounted vertical, the best performer is yes.

I feel CW will take a little longer before it becomes rare.

When people moved from AM to SSB it was seen as upgrading. It was another more efficient mode for the same voice information. Of course there were the "die hards", and there is still some AM nets around today. Although you have to really search for them.

CW is a different thing. It has fanatical followers and the home brew crew will always see CW as the "first mode".

I think CW will become an eccentrics choice, but will still be heard on amateur bands throughout my lifetime (I'm hoping for another 50 years:) even if it becomes a "sked only" mode like some of the rarer data modes.

Wait and see I guess :o)

I'd think a strict 1/4 wave, regardless how it's fed, would be pretty horrific on that specific band. (But I couldn't explain why...it's just from what I've read.) That's why I made mine (55 feet) so that it was under 1/4 wave for 40, and more than 1/4 for all the higher bands.

As for window line being affected by water... yes, it is, but I never found it a big deal. As I recall, I just retuned some of the transmatch settings to accommodate. I used both 450 and 300 ohm window line... and even tv twinlead. What fun I had one night when I heard a cat playing on my flat roof, and I could tell he was playing with the transmission line that was suspended about a foot off the roof... I transmitted 100 watts and heard him take off like a shot!

BTW, I wonder what happened to the OP? Did we drive him away? ;-)

???

With reference to what sort of feedline? SWR only has meaning
wrt a particular line impedance.

There have been non-tube ham rigs for a couple decades now....

In a way, we have come full circle.

Look back 50-odd years, and most ham rigs could match
an SWR of 3 or 4 to 1 without a tuner, because they had fairly
wide-range pi-networks.

That was sacrificed to the desire for miniaturization, but even as
late as the early 1980s, there were rigs with tube finals that could
match 2:1 SWR or so.

Meanwhile the SS rigs wanted 50 + j0 loads for their no-tune finals,
so Transmatches became very common - so common, that rigs began to
offer them built-in, so the rig could match SWR of 3 or 4 to 1. Only
difference was automation.

The more things change....

> > Google "Maxx-comm matcher" (try different

The ARRL Product Review where they tested one, then X-rayed
it and opened it up to show the resistors was well over 20 years
ago.

The fact of the matter is that they *do* work - just not very well.

> Mostly 20 and 40. Just a few of the near out of country
> neighbors on 80.

WInter nights are coming. That's when 80 and 40 really come into
their own.

IMHO, amateur radio antenna design is no more than
10% electrical engineering and no less than 90%
mechanical engineering. In many cases it's 5%/95%.

> > Actually, what you describe is pretty close to

Not really a surprise to me. While short, the 96 footer and lowloss
feed system will put significant RF in usable directions.

> I mostly get down there during contests, and have

CW SS is a month away....

Higher impedance in and of itself doesn't make the difference.
What matters is the lower loss due to more copper and less
dielectric.

The ocarc transmission line loss calculator does balanced lines as
well as coax.

> I've heard of

I agree. A spray with the garden hose will adequately simulate a
rainy day, I think.

I think your biggest possible improvement would be to
see how lossy your tuner/transmission line combo really is, and
improve it if possible.

The prize 160m TX is, of course, the Bauer 707 broadcast transmitter -
a 1 KW (output) AM rig that's about the size of a refrigerator.
They're a rare bird, because as BC stations discarded them, hams
picked them up. They can also do CW with a little terminal swapping.

Fritz Bauer designed beautiful stuff....

What is the purpose of the station? What stations does it communicate
with and what traffic is exchanged?

By "manual Morse" I assume you mean, "not sent by computer"?

IANAL, but, from what I've read, if the FCC or anyone
else with interest can find it, that's good enough.

For example, if you want to know how to decode PSK31,
you can look it up many places.

> If I want to experiment with
> a protocol that is sufficiently different from what's being used that
> the FCC can't obtain commercial equipment to decode it, THEN
> do I need
> to ID it using a "known" protocol?

That's probably a pretty good working definition of
"well known". In the case of a mode like PSK31, you don't
even need special equipment to decode.Just a computer with soundcard,
an interconnect cable, and some free software.
>
> There's a bit of a lose/lose situation here. If the FCC is willing to

> removed
> the requirement to ID and cannot enforce the prohibition on
> encryption
> (since any unknown protocol looks like encryption).

Unknown protocols are not allowed. It has to be possible for
FCC or any interested party to decode the transmission.

They define encryption as *intentionally* encoding to hide the
meaning of a transmission.

> If they require an
> ID that they can decode, it precludes work with experimental
> protocols
> like spread spectrum and the type of experiment that started this > thread
> (modifying a commercial product that isn't capable of CW id).

SS is a different game because, unlike "narrow" modes, it not
only can require special knowledge/equipment to decode, but
can also require special knowledge/equipment to even know it
is a radio signal and not noise. That's why amateur SS operation
requires keeping a log.

If someone puts a several-MHz wide DSSS signal on 2 meters,
will folks listening with FM, AM or SSB receivers even know
it is being done? Or will they just experience a rise in the noise
floor?

It seems to me that FCC's view has changed over the years
in the direction of deregulation of ID.

In the past, they wanted everyone with a receiver and a little
skill to be able to ID any amateur transmission,

Today they only care if FCC can ID any amateur transmission.

Two of the reasons the "regulation by bandwidth" proposals
were so overwhelmingly opposed was that they would have
allowed data transmissions in the 'phone subbands, and removed
many of the restrictions on 'robots'. So an amateur 'phone station
not equipped to decode could be unable to ID an interfering data
station.

If I had my druthers, the bands would be divided into three
subbands-by-mode: CW, data, voice/image.

Only if specifically required to by the District Director, per the
latest version of FCC Part 97.311:

http://www.arrl.org/FandES/field/regulations/news/part97/d-305.html#311

There is currently no a-priori requirement for all amateurs using SS
mode to keep a complete log of all transmitted content. The SS rules
were substantially deregulated/liberalized in 1999 as a result of 97-12,
including deletion of the narrowband ID requirement, the requirement to
use only certain direct-sequence spreading codes, and the a-priori
logging requirement (unless required by FCC officials).

I agree with Phil and Jim that a reasonable interpretation here is that
the FCC wants to be able to decode transmissions at least in principle,
possibly after the fact, and after the source has been DF'd and they've
"replayed the tape" (though recording the wide swaths of bandwidth
required by SS would seem to be a technical challenge of its own), not
necessarily to always be able to decode/ID any arbitrary amateur signal
in real time.

They seem to do this on NCIS and CSI and similar TV programs all the
time.... <ggg>

Interesting to note that our consulting engineering company is named
CSI Telecommunications....but OUR CSI does not mean "Crime Scene
Investigators" - it's the initials of the predecessor parent company
whose business had nothing to do with communications or crime scenes.

DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

A5 - BHUTAN
Kunio Saito,A52VE (JA8VE), had to leave Bhutan on Sep 3 due to health problems. He intended to stay until March 2009.

FM - MARTINIQUE, NA-107
Philippe (ex F8EFU) will live on Martinique (NA-107, DIFO FM-001) for a longer period of time. After hurricane "Dean" he has no telephone or internet at the moment but his radio is working and he is active as FM5LD mostly in CW on 30m. He is running 50 watts into a dipole and plans to put up more wires in the near future. Please send your QSLs via the FM bureau or direct to Philippe Schlegel, Caserne Redoute, BP 616, 97261 Fort de France, Martinique, via France.

FO - CLIPPERTON ISLAND, NA-011
TX5C will be the callsign of the DXpedition to Clipperton scheduled for March 2008. The radio amateurs will be accompanied by a scientific team which is going to study the ecosystem of Clipperton.
The latest information is published at: http://www.clipperton2008.org

H40 - TEMOTU ISLANDS, OC-178
Mike,KM9D, and Jan,KF4TUG, have left Wallis and Futuna and are now on their way to Tikopia Island (OC-178) in the Temotu province. Their call will be H40MY but is not known how long they are ging to stay there. Their QSL manager is OM2SA.

HV - VATICAN CITY
IK0FVC has got the permission to use the callsign HV50VR, "VR" stands for Vatican Radio. Vatican Radio celebrates its 50th anniversary at the moment and the callsign was first aired on Sep 27. Activities can be expected in the upcoming major contests. Unfortunately the QSL manager IW0GPN confirms only direct, but the logs will be uploaded to the LoTW. IK0FVC has also put a new station on the air with HV6SP.
QSL also via IK0FVC, only direct and not very reliably so some rumours

say he collects bucks instead of stamps.

T6 - AFGHANISTAN
Ross (ex VK1UN, VK8UN, 4W6UN, EX1UN) is now active as T61AA from the
city of Faizabad. The length of his stay is not known but he was heard
on 20m after 1200 UTC and on 17m after 0500 and 1330 UTC.
T6 is the new official prefix for Afghanistan, YA calls are not issued
anymore. The QSL route for T61AA is via Ross Ballantyne, PO Box 99,
World Trade Centre, Victoria 8005, Australia.

TK - CORSICA, EU-014
Mike,TK/DL3VTA, and Wolfgang,TK/DL1DVP, will be active from
Corsica (EU-014) in SSB/CW/RTTY/PSK31/63 from Oct 7-14.
QSLs direct or via bureau to their homecalls.

VK9/L - LORD HOWE ISLAND, OC-004; VK9/N - NORFOLK ISLAND, OC-005
Jack,HB9TL/VK6CTL, will be QRV from Lord Howe Island (OC-004) signing
VK9CLF in SSB on 80-10m from Oct 8-18.
After that he will activate Norfolk Island (OC-005) as VK9CNF from
Oct 19-25. QSL cards should be sent direct via HB9QR.

ZL7 - CHATHAM ISLANDS, OC-038
Jacek,ZL7/SP5EAQ, Wojciech,ZL7/SP9PT, Marek,ZL7/SP9BQJ, and
Jozef,SP9-31029, will be active in SSB, CW and RTTY from Oct 5-18.
QSLs via homecalls.

3B7 - ST BRANDON ISLANDS, AF-015
3B7C went QRT on Sep 25 at 0331 UTC. After loggging 135.500 QSOs 3B7C
is ranking third after D68C and 3B9C in the list of the DXpeditions
with the most QSOs. Here is the band and mode breakdown:
10m - 7.958 30m - 13.460 Phone: 51.754
12m - 8.851 40m - 19.906 CW: 79.217
15m - 18.887 80m - 13.267 RTTY: 6.549
17m - 21.052 160m - 2.922
20m - 31.577
All details about 3B7C can be found online at: http://www.3B7C.com

3C - EQUATORIAL-GUINEA, AF-010
Fred,KH7Y, Vic,EA5YN, Luis,EA5BRE, and Elmo,EA5BYP, will show up as
3C7Y from Equatorial-Guinea from Oct 5-14 and the team states this is
the first activity since five years. The team will be active in CW/SSB/
RTTY on all bands from Bioko Island (AF-010) and one station per mode
shall be active all around the clock. They have beams for 6/10/15/20m,
a rotary dipole for 40m and normal dipoles for the other bands.
QSLs via EA5BYP. Further information can be obtained from their website
http://personal.telefonica.terra.es/web/ea5yn/3c7y.htm

5H - TANZANIA
Pat,W8FV, is going to put up his expedition tent on the southern lake-
front of Lake Victoria from where he will be QRV as 5H9PD from Oct 6-9.
QSLs via W8FV.

7Q - MALAWI
Ely,IN3VZE, is spending his holidays on the southwestern lakefront of
Lake Malawi. Listen for 7Q7CE on all bands from Oct 4-25.
QSL via bureau to IN3VZE or direct to:
IN3VZE, Ely Camin, Corso 3 Novembre 136/2, 38100 Trento, Italy.

9Q - DEMOCRATIC REPUBLIC OF CONGO
John,SM5DJZ, is the new QSL manager of 9Q1TB and 9Q1EK, after their
last manager SM5DQC passed away. Direct QSLs should be sent to:
Jan Hallenberg, Vassunda Andersberg, SE-741 91 Knivsta, Sweden.
The logs will still be uploaded to the LotW and online logs are still
available at: http://www.logsearch.de

FRANCE, SPECIAL EVENT STATIONS
TM0VDM will be QRV from Oct 6-19 to celebrate the 100th birthday of
the poet Maxence Van der Meersch (1907-1951). QSL via F5KEB.

SWITZERLAND, SPECIAL EVENT STATIONS
HB9SPACE will be active during the World Space Week from Oct 4-10.
To celebrate the 50th anniversary of astronautics there will be special
activity by the Swiss astronaut Claude Nicollier,HB9CN, from the museum
of military aviation "Clin d'Ailes" in Payerne on Oct 6.
QSL via bureau to HB4FR.
His operating schedule and details can be found at: http://www.hb4fr.ch

LINKS: Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

Ludwig van Beethofen was an enthusiastic CW fan. You don't believe it?
Click this link and be amazed: http://www.zerobeat.net/morse505.html

UPCOMING CONTESTS

Oct 1-7: CW activity week of the German DTC e.V.
Oct 2-4: YLRL Anniversary Party
Oct 3: German Telegraphy Contest (DTC)
Oct 6: European Sprint Contest and DARC Hell Contest 80m
Oct 6/7: Oceania DX Contest and IARU-Region-1 UHF/SHF Contest
Oct 7: RSGB 21/28 MHz Contest and DARC Hell Contest 40m

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AS-146, BY4, Shandong Prov. N.E. Grp.: BY1TK/4 and BY1TT/4 are working from
Chang Dao Island from Oct 1-6. QSL BY1TK/4 via EA7FTR, BY1TT/4 via HC.

EU-001, SV5, Dodekanes: Andy,DL4OK (NX1S), plans to show up as SV5/NX1S in
QRP on 20m during his holidays on Kos Island between Sep 29 and Oct 13.
If possible he will also activate the old lighthouse Akra Ayios Foukas
(LH 1730, DOD 063). QSLs via bureau or direct to DL4OK.

EU-010, GM/MM, Outer Hebrides: The Workington & District ARC plans to become
active from Barra Island signing MS0WRC from Oct 6-12. They also intend

to make short trip to the islands Vatersay and Eriskay.
QSLs via MX0WRC or G0MTD.

OC-142/VK4/QLD State Centre Group; OC-160/VK4/QLD State North Group,
OC-171/VK4/QLD State South Group: Chris,DK2CRN (VK2AMB/4), and
Georg,DL1ECG (VK2ALU/4), will visit following islands from Oct 16-26:
Fraser Isl./OC-142 (WLOTA LH 2976), Heron Isl./OC-142, Dunk Isl./OC-171
and Hamilton Isl./OC-160. They will run 100 watts into a double Zepp
and an Outbacker. This is a holiday activity and no DXpedition!
QSLs via homecalls (direct/bureau).

When I came up with infinite SWR, I didn't spend a whole lot more time
on the antenna. I could probably match it with a super long piece of
coax, and attendant loss, but it is really so much easier to change the
length so it isn't 1/4 wave on any desired frequency I might want, have
the SWR at a manageable level, and use the tuner.

I look at it as one of those things that are easy to avoid.

That is the case. I have heard that some ladder line will get "frosted" by sandstorms or even have moss grow on them, which could lead to trouble re wetting, or being somewhat submerged in a wet substance, but that is kind of extreme. I've got 5 year old window line that still has the water bead up on the poly.

1644. "Fony Fonetics?"

Newsgroup: rec.radio.amateur.moderated
Date: 2007-10-04 20:00:51 UTC
From: Alan WA4SCA <ALANBIDDLE70@YAHOO.COM>
Message-ID: <skgag395vp3noj3f8s3gg07avqpeoj0jpv@4ax.com>
Source record: 3749

Hi,

Years ago, I had a list, now long lost, of "Fony Fonetics." It was a humorous phonetic alphabet of words which either were odd exceptions where the sound did not match the spelling, or were exotic and hard to distinguish over the air, such as using syzygy for "S" or Gemini for "G." I tried the usual Google route, and am wondering if anyone happens to have a list. I think the original may have been in one of the ham magazines.

> Years ago, I had a list, now long lost, of "Fony Fonetics."

I don't know if I found the one you had, but here's one from rec.humor.funny

The same old standard phonetic alphabet (which you
would use to describe spelling "Wilson" as "Whiskey, India,
Lima, Sierra, Oscar, November") has been used by aircraft
pilots, millitary personnel, and many others for many years
now. So, I finally decided to come up with something a bit
more "original" for those people who annoy me:

A Are N Nine
B Bee O Owe
C Cite P Pseudonym
D Double-U Q Queue
E Eye R Rap
F Five S Sea
G Genre T Tsunami
H Hoe U Understand?
I I V Vie
J Junta W Why
K Knot X Xylophone
L Lye Y You
M Me Z Zero

People don't ask me to spell anything over the
phone anymore.

==> SON OF FIRST HAM TO OPERATE IN SPACE TO FOLLOW IN FATHER'S FOOTSTEPS

Richard Garriott, KE5QNX, son of Owen Garriott, W5LFL, will be launching into space and living aboard the International Space Station in October 2008 as a client of Space Adventures. Owen Garriott operated the world's first Amateur Radio Station from space, W5LFL, as part of the Spacelab

mission on the space shuttle Columbia (STS-9) in 1983; he is on the Astronaut Advisory Board of Space Adventures. Space Adventures is a company that allows private citizens the chance for space travel on Russian Soyuz spacecraft at an estimated cost of $30-55 million per person. Richard, who is Space Adventures vice chairman, has applied for his grandfather's call sign, W5KWQ. He plans on making Amateur Radio on the International Space Station (ARISS) contacts when he is in space.

Richard will be the sixth private citizen to venture into space. According to his Web site <http://www.richardinspace.com>, his "main objective for his mission is to encourage commercial participation. By fostering the involvement of individuals, companies and organizations in his spaceflight Richard hopes to demonstrate that there is commercial potential in private space exploration, while furthering the understanding of space. Richard plans to demonstrate this by taking on various commercial projects, corporate sponsors for his mission activities and by helping companies market their products though their association with an actual space mission."

A self-described experienced terrestrial explorer -- "I have traveled to all seven continents on adventures that have included tracking mountain gorillas in Rwanda, canoeing down the Amazon, diving in a submarine to the Titanic and trekking Antarctica in search of meteorites" -- Richard says on his Web site that he is excited about his trip into space. "Journeying to space has been a dream of mine since I was young. So for me, space exploration was tangible, it was part of my family's DNA. But I was also acutely aware of the costs and complexity that kept it under the purview of the government. There was no imaginable way I was going to get a front-row seat like my father." Richard, 46, is the first American second-generation astronaut. In Russia, Sergey Volkov, 34, a pilot, is set to fly to the ISS as commander next spring. His father, Aleksandr, rocketed into orbit in the 1980s and early 1990s.

The first commercial research partner involved in Richard's space mission is ExtremoZyme, Inc, a biotechnology company co-founded by his father. According to his Web site, "Richard will operate an ExtremoZyme protein crystallization experiment loaded with proteins, many of which have important cellular functions and are often associated with common human diseases. Having access to these superior crystals will enable researchers to learn more about the molecular structure of these proteins, which is essential for protein engineering and drug design."

A well-known computer game developer, Richard, also known in the gaming world as Lord British, was the owner of now-defunct Origin Systems. The company is best known for gaming software such as the Ultima fantasy computer role-playing game series, Wing Commander and Crusader. Richard then founded Destination Games, which has since merged with NCsoft where he is an executive producer; his new game, Tabula Rasa, is set to be released by NCsoft later this month.

Rosalie White, K1STO, ARRL ARISS Program Manager, said, "With Richard's fame with the general public and Owen's fame in the science industry and

with ham radio operators, Richard's planned ARISS educational activities should generate a great deal of interest for ham radio in all ages and types of people. This will be good for Amateur Radio and ARISS. The ARISS Team is really looking forward to supporting his ARISS school goals; we were so pleased to hear that he's already earned his ham license."

Richard lives in Austin, Texas. His home, Britannia Manor, has been featured on MTV. -- Thanks to Fred Maia, W5YI, for some information.

==> ARRL/TAPR CELEBRATE 26TH ANNUAL DIGITAL COMMUNICATIONS CONFERENCE

The ARRL and TAPR held their 26th Annual Digital Communications Conference this past weekend, September 28-30, in Hartford, Connecticut. The DCC is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees had the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications.

With more than 150 in attendance during the three-day event, ARRL Chief Operating Officer Harold Kramer, WJ1B, said, "It was exciting to see and hear about the latest developments in Amateur Radio digital technology. The depth of knowledge, commitment and enthusiasm were very impressive and bode well for the future of Amateur Radio."

According to QST Editor Steve Ford, WB8IMY, many of Friday's seminars were devoted to the Automatic Position Reporting System (APRS). Bob Bruninga, WB4APR, gave the first session of the conference, "The APRS Local Voice Repeater Initiative." Bruninga is the developer of APRS.

Other seminars at the conference included "The Flex 5000 and Software Defined Radio Software," "HPSDR Update," "AMSAT's Phase IV," "A Method for Automatic Image Balancing in IQ Mixer Based Software Defined Receivers" and "Suit-Sat 2 Update." Ford also gave a standing-room-only seminar on an introduction to HF digital.

Ford said one of the highlights at the DCC was the NUE-PSK device. This gizmo makes it possible to do PSK31 without a PC. There is no word yet on when kits will be available for this item. "The latest Flexradio software-defined transceiver also drew a great deal of attention," Ford said. RPC Electronics debuted their all-in-one APRS tracker (2 meter transmitter, packet TNC and GPS receiver in one compact package). The company said it would be available for sale in December, just in time for holiday giving.

A popular feature of the DCC was the Demonstration Room. This was a place for participants to set up their projects for everyone to see, as well as a place for vendors to demonstrate their equipment.

ARRL New England Division Director Tom Frenaye, K1KI, spoke to conference participants Saturday morning, welcoming them to the DCC. TAPR held their annual meeting later that day.

The 2008 Digital Communications Conference will be in Chicago, but no date has been set. Check out the TAPR Web site <http://www.tapr.org> for more information.

==> ARRL AND MARS TEAM UP FOR WASHINGTON DEMO

The ARRL and Virginia radio amateurs associated with the Army Military Affiliate Radio System (MARS) put their emergency communications skills to the test on October 3, demonstrating to members of Congress and other Federal agencies how ham radio continues to work when other means of communications are disabled during hurricanes or other natural or man-made disasters. The demonstration took place in a compact portable communications center erected on the Capitol grounds near the Rayburn House Office. More than 50 MARS operators from Virginia, Maryland, West Virginia, Pennsylvania, Delaware and other states participated in the event.

According to the scenario issued by exercise planners, the event assumed a Category 3 hurricane named Quincy that deposited heavy rains over a multi-state area on October 2 and made landfall in the Delaware, Maryland and Virginia region later that day. The "storm" moved north into New Jersey and Pennsylvania, turned counterclockwise and traveled southward before returning to the Atlantic through the Carolinas and Georgia on October 5.

During the exercise, MARS operators also monitored other Amateur Radio emergency frequencies and coordinated the exchange of messages across their networks as well, honing their ability to work with other radio emergency providers such as the Amateur Radio Emergency Service (ARES).

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD; ARRL Chief Development Officer Mary Hobart, K1MMH, and ARRL Media and Public Relations Manager Allen Pitts, W1AGP, made the trek down to Washington. "As the unusually hot October sun fried us, despite the lack of sunspots," Pitts said, "representatives of ARRL, MARS and the Southern Baptist Disaster Response organizations fought poor propagation to make contacts through the day primarily on VHF, 20 and 40 meters. Dennis Dura worked the ARRL's HF rig most of the day as W1AW/3. Arkansas Congressman Mike Ross, WD5DVR -- one of only two Amateur Radio operators in Congress -- also made contacts from the site."

Pitts said that the ARRL team used the "When All Else Fails Banner" at the site. "We hoisted the banner in front of the Capitol dome. It attracted many vacationing hams in the area who stopped by to see what was happening, and some even were able to be brief 'guest operators.' But the day was mostly spent showing Amateur Radio capabilities to the Congressional staffers and others who work behind the scenes to make the wheels of government go. Janet Worthington, KB3PDS, of Chwat & Co -- the ARRL's lobbying firm -- was able to use the demonstration as a topic and drop off ARRL materials about HR 462 <http://thomas.loc.gov/cgi-bin/query/z?c110:H.R.462:> and Amateur Radio in every congressional office."

MARS operators used a variety of modes to move messages from the originator to the final recipient, depending on the operating conditions in place at the time. Operators used voice, CW and WinLink2000 to move messages. WinLink uses an e-mail-type interface, making it simpler for served agencies to send and receive their emergency traffic.

MARS volunteers are required to complete a variety of training courses to be a part of the program. They use personal radio equipment and are capable of operating on emergency power when conditions dictate. Many members are former servicemen and women who first learned radio communication skills while serving in the Army. MARS is a Department of Defense sponsored organization of Amateur Radio operators trained and equipped to provide emergency communications for military and government agencies when normal links are interrupted by accident, natural calamity or hostile action. W1AW recently received a MARS call sign - AAN1ARL. For additional information about Army MARS, visit their Web site at <http://www.netcom.army.mil/mars/>. -- Some information provided by Jeff Slusher, KE5APC/AAT3PD, Public Relations Manager for Virginia Army MARS.

==> LOOK FOR THE NOVEMBER ISSUE OF QST IN YOUR MAILBOX

The November issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

This issue features an article by ARRL News Editor S. Khrystyne Keane, K1SFA, on the National Football League's Game Day Frequency Coordinator Program in her article "Football: Fumbles, Field Goals and Frequencies." Game Day Frequency Coordinators, many of whom are hams, are responsible for coordinating more than 300 frequencies for broadcast, referees, coaches and quarterbacks, as well as parking and security frequencies and more at each NFL game.

Did you miss the 2007 ARRL National Convention in Huntsville, Alabama? Catch up on all the activities with the ARRL Convention coverage in November's QST. The convention, held in conjunction with the Huntsville Hamfest and the Global Amateur Radio Emergency Communications Conference, drew more than 5000 people.

If you're in the market for a dual-band mobile transceiver, this is an issue you don't want to miss. Both the Kenwood TM-V71A Dual Band Mobile Radio and the ICOM IC-2820H Dual Band FM Transceiver are featured in November's Product Review.

ARRL Regulatory Branch Manager Dan Henderson, N1ND, explains how the FCC's recent actions affect you in his article, "The New Road Map to the FCC Rules."

Rich Roznoy, K1OF, wants to make sure you have the right kind of antenna for your car. You'll want to read his article, "A Comparison of HF Mobile Antenna Designs." If you need an easy-to-make Yagi antenna for your handheld transceiver, be sure to check out the article by Tom Hart, AD1B.

Get out your calendars and make sure you're on the air for the ARRL 160 Meter Contest, November 30-December 2, and the ARRL 10 Meter Contest, December 8-9. November QST has the official contest announcements and indicates just what you need to do to participate in these great operating events.

Look for your November issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> NOMINATIONS NOW BEING ACCEPTED FOR THE 2007 ARRL INTERNATIONAL HUMANITARIAN AWARD

Nominations are open for the 2007 ARRL International Humanitarian Award <http://www.arrl.org/FandES/field/awards/humanitarian.html>. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize Amateur Radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster.

The awards committee is now accepting nominations from Amateur Radio, governmental or other organizations that have benefited from extraordinary service rendered by an Amateur Radio operator or group. Nominations should include a summary of the nominee's actions that qualify the individual (or individuals) for this award, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. These statements may be from an official of a group (for example, the American Red Cross, The Salvation Army, a local or state emergency management official) that benefited from the nominee's particular Amateur Radio contribution. Nominations should include the names and addresses of all references.

All nominations and supporting materials for the 2007 ARRL International Humanitarian Award must be submitted in writing in English to ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA. Nomination submissions are due by December 31, 2007. In the event that no nominations are received, the committee itself may determine a recipient or decide to make no award. The winner of the ARRL International Humanitarian Award receives an engraved plaque and a profile in QST and other ARRL venues.

==> NASA TV SHOWS LAUNCH, DOCKING OF SPACECRAFT, MORE

If you have ever wanted to see what goes on when a spacecraft launches into space or docks with the International Space Station (ISS), be sure to check out NASA TV <http://www.nasa.gov/ntv> on your computer. You can watch live coverage of preparations for the launch, the launch and even the docking and hatch openings and closings as spacecraft arrive and leave the ISS.

NASA's Expedition 16 Commander Peggy Whitson, Soyuz Commander, Flight Engineer Yuri Malenchenko, RK3DUP, and Malaysian spaceflight participant

Sheikh Muszaphar Shukor, 9W2MUS, are set to launch October 10 at 1321 UTC from the Baikonur Cosmodrome in Kazakhstan. Their Soyuz TMA-11 craft is planned to dock to the station on October 12 at 1427 UTC. Coverage for this event begins October 10 at 1230 UTC. Coverage of the Soyuz docking with the ISS, opening of Soyuz's hatch door and the post-docking news conference from Moscow begins October 12 at 1400 UTC.

NASA Flight Engineer Clay Anderson, KD5PLA, who has been on the station since June, will remain with Whitson and Malenchenko until the arrival of space shuttle Discovery on the STS-120 mission. NASA astronaut Dan Tani, KD5TXE, will arrive on that mission to replace Anderson, who will journey home on Discovery.

Expedition 15 Commander Fyodor Yurchikhin, RN3FI, Soyuz Commander and Flight Engineer Oleg Kotov and Shukor will return to Earth October 21 at 1032 UTC in their Soyuz TMA-10 spacecraft now docked to the ISS. Yurchikhin and Kotov have been aboard the station since April. Coverage for this event begins October 21 at 0345 UTC.

==>SOLAR UPDATE

Tad "Eleven Angels of Mercy Sighin' Over That Black Hole in the Sun" Cook, K7RA, this week reports: After 21 days of no sunspots, a sunspot reappeared, but only briefly. In fact, it was one sunspot, number 971, that emerged on September 28 for just a few days. Now we are back into a zero-sunspot period of indeterminate length, just four days so far. Solar wind provided geomagnetic disturbances, with September 29 being the most disturbed day. There was another rise in activity centered on October 3. Currently, the Air Force predicts a moderate rise in geomagnetic activity peaking October 20 with a planetary A index of 15, and a much larger rise to planetary A index of 25 on October 26. But spaceweather.com reports another solar wind stream to arrive on or around October 11. Geophysical Institute Prague predicts quiet conditions October 5-7, unsettled October 8, quiet to unsettled October 9, quiet October 10 and quiet to unsettled October 11. Sunspot numbers for September 27 through October 3 were 0, 15, 16, 17, 12, 0 and 0 with a mean of 8.6. The 10.7 cm flux was 67.1, 67.2, 67.6, 65, 67.7, 66.4, and 67.3 with a mean of 66.9. Estimated planetary A indices were 19, 21, 26, 12, 8, 9 and 18 with a mean of 16.1. Estimated mid-latitude A indices were 10, 15, 24, 11, 7, 5 and 9 with a mean of 11.6. . For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the NCCC Sprint (CW) on October 5. On October 6, be sure to check out the TARA PSK Rumble

Contest, the NCCC Sprint (CW), the International HELL-Contest (80 meters) and the EU Autumn Sprint (SSB). The Oceania DX Contest (SSB), the California QSO Party and the PRO CW Contest are October 6-7. Tune in for the International HELL-Contest (40 meters), the UBA ON Contest (6 meters) and the RSGB 21/28 MHz Contest on October 7. The YLRL Anniversary Party (SSB) is October 9-11 and the 10-10 International 10-10 Day Sprint and NAQCC Straight Key/Bug Sprint are both October 10. Next week, the ARRL School Club Roundup is October 15-19. The NCCC Sprint (CW) is October 12. The Microwave Fall Sprint, EU Autumn Sprint (CW) and FISTS Fall Sprint are October 13. The Makrothen RTTY Contest, Oceania DX Contest (CW) and Pennsylvania QSO Party are October 13-14. The North American Sprint (RTTY) and UBA ON Contest (SSB) are October 14. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, October 21 for these online courses beginning on Friday, November 2: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL Executive Committee Upholds Ethics and Elections Committee's Decision: The ARRL Executive Committee has completed its consideration of the appeal filed by Carl Gardenias, WU6D, of the decision of the ARRL Ethics and Elections Committee disqualifying him as a candidate for Director of the Southwestern Division. Based on its own independent review, the Executive Committee voted unanimously by teleconference to affirm the decision. This decision was communicated to Mr Gardenias on October 1, along with detailed findings of fact and conclusions of the committee. The Executive Committee is meeting this weekend and will release additional information after the meeting.

* James Michener, K9JM, Wins September QST Cover Plaque Award: The winner of the QST Cover Plaque Award for September is James Michener, K9JM, for his article "Maximum Gain Portable HF Yagi." Congratulations, James! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll <http://www.arrl.org/members-only/qstvote.html> Web page. Cast a ballot for your favorite article in the October issue by Wednesday, October 31.

* Mark the "Play on PropNET" Weekend on Your Calendar: Play on PropNET is a two-day, worldwide event designed to promote PSK31 and propagation study on the 30 meter band. This event, scheduled for 0000 UTC October 6-2359 October 7, will be on 10.1395 MHz. Simply download PropNetPSK

<http://www.propnet.org/>, a free PropNET software program, configure it for your station and activate for the weekend. PropNetPSK software will place the PSK stream at +1500 Hz (10.1410 MHz true). In normal operation, the software will cause your station to automatically ID at regular intervals (several times per hour) throughout the weekend. If your licensing authority requires that an operator be present whenever transmitting, switch to "Lurker" mode when you are away. This will allow your station to monitor and report anything that is heard, even if it isn't transmitting. PropNET uses the Internet as a reporting tool. Participants who are connected to the Internet (even using intermittent dial-up connections) will have their reports sent to a mapping system that will graphically display everything that is "caught" (a PropNET term for received). Transmitting stations will have their call signs shown on the map. Receive-only stations (Lurkers) will display using their 6-cipher grid-locator rather than call sign. Don't worry if you don't have an Internet connection at your station, as others will hear your transmission and report it to the Internet. As an added benefit, all stations that report activity will have their activity added to an animated GIF file at the end of each UTC day. All worldwide activity will be captured to that animation and will be able to be played back at a later time. All amateur and SWL stations worldwide are encouraged to participate for this first event of its kind. Thanks to the 30 Meter Digital Group for suggesting this activity and to the PropNET community of experimenters for supporting it. -- Ev Tupis, W2EV

* Notes from the ARRL DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, wants you to know that there is a feature on the DXCC Web site <http://www.arrl.org/awards/dxcc> that lets you verify that your DXCC application has been received, and when. Near the middle of the Web page, Moore says, is a link titled "List of DXCC Applications Received." Click on this link, and you will see applicants' call signs (listed alpha-numerically) and date the applications were logged into the DXCC computer. Note: this is not the date received from the post office -- it is the date the application was logged into the DXCC system. At the top of the page is a date. This date is always the Friday of the current estimated period DXCC is mailing applications. Due to the sheer volume of applications that pass through DXCC, applications before and even after this period may already be in progress. From this information, you can estimate the turnaround time of your application. Using today's date, look at the mailing date on the Web site. The difference between these two dates is the approximate turn-around time - if today's date is September 10, 2007 and the date shown on the Web page is June 29, 2007, the estimated turn-around time can be determined to be approximately three months.

* ARRL Shipping New Books: The ARRL is shipping three new ARRL publication editions: "The 2008 ARRL Handbook," "ARRL's HF Digital Handbook" and "ARRL's Low Power Communication." An early bird bonus CD is guaranteed for members and customers who place orders for The ARRL Handbook by October 31. You can find ordering details and more information at ARRL Online Product Catalog <http://www.arrl.org/shop>.

These books are also available from ARRL publication dealers. Find the dealer nearest you by going to the ARRL Dealer Locator Web page <http://www.arrl.org/catalog/dlrsearch.phtml>.

* Longtime ARRL Staffer Retires: Eileen Sapko, ARRL Awards Manager, retired September 28 after 23 years at League HQ. We wish her the best!If you have any questions concerning any of the ARRL awards programs, please direct them to Bill Moore, NC1L <bmoore@arrl.org>.

* Let Us Know What You Think: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW

bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1648. WIANEWS for week commencing OCTOBER 7 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-10-06 14:12:54 UTC
From: nationalnews@wia.org.au
Message-ID: <200710061000.l96A07312455@panix2.panix.com>
Source record: 3753
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing OCTOBER 7 2007

Richard VK3JFK and his crew are performing miracles with lots of hard work on the APRS front in VK3

VK3 APRS PATH CHANGE:-

Remember to change your Mobile Tracker or Kenwood radio's due to the implementation of the APRS "New n-N Paradigm".

Over time the old RELAY,WIDE and RELAY,WIDE2-2 paths will not longer work in Victoria. They will be replaced with the path of WIDE1-1,WIDE2-1 for mobiles and [your local digi],WIDE2-1 for home and fixed stations.

To implement the "New n-N Paradigm" all you need to do is edit the APRS path in your tracker, Kenwood radio or home station and change it to;

- WIDE1-1,WIDE2-1 for your mobile.

- [Your local Digi],Wide2-1 for your home station. (Replace [Your local Digi] with the closest digipeater to you)

In a few instances you may need to use the path of WIDE1-1,WIDE2-2 for mobiles.

For the recommended path in your area visit http://vk3.aprs.net.au/packet_path_guide.htm

The following VK3 area Digipeaters only support the "New n-N Paradigm"; VK3RCV-1, VK3RON-1, VK3RLV-1, VK2RBX-1.

VK3ROW-1 and VK3RMD-1 will be upgraded to support only the "New n-N Paradigm" over the next few weeks.

IF you don't change your path you may no longer be able to access the VK3 area APRS RF Network.

WICEN & APRS:-

WICEN is getting ready for the annual Rally of Melbourne Event (10th & 11th of November) which is held in the Healesville area each year.

This year more use of APRS is expected. You may have noticed a number of digipeaters with a W overlay on the icon on your map. These are the WICEN digis that being setup on 145.200Mhz for the Rally.

They will be used for Rally scoring as well as APRS.

During the Rally you should be able to watch the tracked vehicles from feeds on APRS-IS as the rally APRS data is being fed into an IGate. WICEN may use ACMA approved operational call signs for the event. Please do not use these digipeaters for general APRS traffic.

The second rally event to use APRS this year will be the Alpine Rally held on the 24th and 25th of November. This rally is held in the Bairnsdale area.

It will be using the APRS digipeaters VK3REB-1, VK3VHF-1 as well as 2 portable digipeaters. The event will operate on 145.175Mhz for scoring and Rally APRS traffic. During this time all non-local APRS traffic will be removed from the RF Network and local stations that are not involved in the event are requested to reframe from using APRS for the period of the event.

This event will also be fed to APRS-IS.

(Richard VK3JFK VK3 APRS Coordinator).

Richard VK2SKY says a US ham taking part in the World Solar Challenge hopes to be on 30m with APRS so we could follow his progress, www.findu.com
But he needs to borrow a rig, preferably from someone in VK5

The race is Oct 20 through Oct 27, Darwin to Adelaide.

Andrew, KE7ESD (atemme@gmail.com) says "To make it easier on getting/returning the equipment, we will have team members coming through Adelaide early this week. They will then be travelling up to Darwin. I will be arriving in Darwin
on the 16th".

p.s. I'm in the process of getting my Australian license right now!

Now KE7ESD's email address...

atemme@gmail.com

Australian D-Star News.

Things are hotting up in the Australian D-Star world.
Since NTAC allocated the segment in the band plan for D-Star operations there has been a lot of simplex activity in Melbourne particularly on 145.125Mhz.

D-Star simplex contacts have been reported from Box Hill to Murchison, a distance if approximately 150Kms. Both stations where using base station antennas however one station was using an ICOM IC-91AD hand held.

Amateurs seem to be embracing the D-STAR technology in a very enthusiastic way, in fact, one local ham outlet in Melbourne has been so busy, he is talking about taking holidays!!!

The Melbourne D-Star team are working hard to have the first Melbourne D-Star repeater VK3RWN online ASAP. The second D-Star repeater, VK3RMM will be operational before the end of the year. The VK3RMM analogue voice repeater will operate in parallel with the VK3RMM digital D-Star repeater.

On Friday night an informal talk was given to the Maryborough (Vic) Amateur Radio Club by Peter VK2TQ and Richard VK3JFK on D-Star.
At the same time in the Blue Mountains Henry, VK2OM was giving a D-Star talk to the member of the Blue Mountains Amateur Radio Club.

There are a number of new concepts to learn about DStar operations. It's not the same as using an analogue repeater, yet it opens up a new range of options for operators such as DPRS, D-Star SMS and noise free international digital voice intercommunications through D-Star Gateways and the internet.

To assist operators to gain and share their knowledge, experience and local information on D-Star the WIA has set up a National D-Star email list. You can joint the National D-Star list by going to http://lists.wia.org.au/mailman/listinfo/dstar and fill out the details to subscribe.

A web site is being developed at www.dstar.org.au

The web site contains some basic information on D-Star and the Australian D-Star scene. The National D-Star web site is currently being built and will be on line soon.

HAMS ACROSS AUSTRALIA.

CENTRAL COAST AMATEUR RADIO FIELD DAY

On Sunday 17th February 2008 the Central Coast Amateur Radio Club Field Day will again be held at the Wyong Race Course. This is the most popular field day in Australia, generally drawing about two thousand interested amateurs and electronic hobbyists each year.

Major Australian radio and electronic equipment suppliers will be in attendance with displays of the latest radio and electronic equipment for sale.

Displays will also be provided by several amateur radio clubs and special interest groups and throughout the day an interesting lecture program will be provided.

The Newcastle Embroiders Guild will also be providing craft activities throughout the day which should be of great interest to the XYL's.

The extensive car boot sale area will again be very active, providing a wide choice of goods for sale. As usual the free tea, coffee and chat area will operate but this time in a new bigger location. The various food outlets providing hot and cold sit down or take away food will also operate as usual.

As a new feature this year to promote further socialisation by those attending the field day, an Official Dinner will be held at the venue on the evening of Saturday 16th February 2008. This will be a buffet style meal with a guest speaker who will talk on an interesting radio relevant subject.

This Field Day provides the greatest opportunity for the amateur operator or electronic enthusiast to see and purchase all the latest gear in one location and meet up with a very wide range of like minded enthusiasts a great opportunity to meet up with old friends and make new friends.

More details will soon appear on the Central Coast Amateur Radio Club's web site www.ccarc.org.au.

How about you put it in your calendar as a must do event!

OCTOBER 27-28
The Wagga Amateur Radio Club is this year's host for the Riverina Field Day.

The venue is again the clubhouse in Small St. The usual flea markets, Trade and other displays will run continuously in the hall from 9am on Sunday.

There will be a Field Day dinner to mark the opening and will be held at Clubrooms on the Saturday evening. It will take the form of a smorgasbord. Bookings are essential.

More Field Day information can be obtained from the club's website http://wagga.radiocorner.net/

NEW VK7 ADVISORY COMMITTEE

David Potter VK7YUM • WIA Nominee
Clayton Reading VK7ZCR • REAST Nominee
Jason Reilly VK7ZJA - NTARC Nominee
Peter Rumble VK2IY/4KX • NWTARIG Nominee

In short the functions of the Advisory Committee as defined by the
National WIA include:

Provision of advice and information to the board in relation to
matters identified by the board;

Promote amateur radio, the WIA and membership;

Making available and encouraging others to make available local news
for WIA broadcasts and releases; and,

Liaising with affiliated clubs.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO PRESENTED BY KYLEA VK6FXYL

CLUBS TO ADMINISTER ZU EXAMS

The SARL is pleased to announce that the SARL has finalised the arrangement
for affiliated clubs to offer the class B examination for their students.
The new arrangement mean that Class B examinations can be conducted at ANY
time of the year in addition to the South African national examinations held
in May and October.

SARL PRESIDENT ADDRESSED FET TEACHERS

Graham Hartlett, ZS6GJH, addressed a group of teachers who attended a
training course for Further Education and Training arranged by the Department
of Communications. The objective of the course is to train teachers to
take amateur radio into their colleges.

He cited amateur radio not just as a fun activity, but an activity that has a
positive outcome on the further training of young people in the Science,
Engineering and Technology disciplines.

Further Education and Training (FET) colleges strive to provide high-quality
education and training to help learners equip themselves with the
qualifications and skills needed to start out on a chosen career path.

"Amateur Radio can make a valuable contribution in this career choice and in
addition teach basic technical and communication skills that will equip young
people to render services to their community such as disaster communication
and communication during large sporting events.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or
training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Also check the text edition of each news edition, where we do keep a secondary listing.

On the audio broadcast we will continue to give new information when it is received, but just in case you miss it one week, you can always access our text

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

Summerland (Lismore), their next Foundation course/exam will be 10-11 November
If you know of any prospects, advise them of this date and let John VK2JWA or Duncan VK2DLR of their details.

Summerland Amateur Radio Club. VK2SRC Ph.: +61 02-66247247
Club: 414 Richmond Hill Rd. Email: vk2src@sarc.org.au
GOONELLABAH, NSW. 2480. http://www.nor.com.au/community/sarc/
Post: PO Box 524 IRLP: 6220

ARNSW regularly holds Foundation Licence Assessments as well as Exams for Standard and Advanced Licences.
Held on the last weekend of each EVEN numbered month.

Waverley Amateur Radio Society (SYDNEY)
They hold Foundation Licence courses regularly, email the club at exams@vk2bv.org
OR visit vk2bv.org or call Simon, VK2UA on 9328 7141.

VICTORIA

At Bendigo classes and licence assessments are conducted by Ross Pittard VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds classes. Contact Peter Rafferty VK3CC on 5460 4387 or email majorca49@hotmail.com

QUEENSLAND

The Redcliffe Club will be conducting Foundation licence training at the Club rooms commencing on 8 October. Alan Jenner, VK4KZ, will hold classes every Sunday for 4 Sundays, commencing 10.30 am and finishing at 3 pm. If you wish to join these classes please contact Alan by phone, 5497 4634 or email him at alan.jenner@bigpond.com.

On the Gold Coast and want to talk to the world through their IRLP and EchoLink systems? Or already licensed and wish to upgrade Foundation

to Standard? Well classes are held at the Nerang Clubhouse of the
GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time
to suit you.

TARC WIA Exams Information
Exam sessions are held on demand with WIA Assessors and assessment packs
available for all 3 levels of licensing.
Contact theTARCinc WIA Exams Regional Co-ordinator Roger/VK4CD 0417 638366.

Tablelands Radio and Electronics Club
TREC WIA Exams Information
TREC will conduct exam sessions as required, at a time to suit the
candidate. WIA Assessors and assessment packs are available for all 3
levels of licensing.
Contact the TREC WIA Exams Co-ordinator Dale VK4DMC on 4091 3700 or
vk4dmc@wia.org.au for further information.

SOUTH AUSTRALIA

Adelaide Hills Amateur Radio Society will run Foundation licence's
at the Aviation Museum, 56 Lipson Street Port Adelaide, November
3rd and 4th. Contact the course convenor, Sasi Nayar on 0417 858 547

Examinations are hosted by South Coast Amateur Radio Club.
Those interested in sitting for foundation or license upgrades,
please contact by email
vk5kbj@internode.on.net

TASMANIA

Radio and Electronics Association of Southern Tasmania

For more information or enrol please contact Reg Emmett VK7KK by
emailing regemm@ozemail.com.au or calling 0417 391 607

And remember Foundation Licence Manuals and CD's are available for
purchase at McCann's Model World in Elizabeth St. Hobart at $20.

A quick reminder about "Intro to the Standard Licence" sessions
on a Saturday afternoons from 1:00 to 4:00pm in the Domain clubrooms.

These sessions are an introduction to the standard licences and
attempt to de-mystify the upgrading process.
(Ken VK7DY/Reg, VK7KK)

INTERNATIONAL NEWS

Marconi Clifden Celebrations

On the 17th of October 1907 Guglielmo Marconi sent his first commercial
message from the then new station at Clifden, Ireland. This October in
celebration of this historic event members of the Galway Radio Experimenters
Club will be running a special event station from Saturday 13th to Wednesday
17th from Clifden. The club has been issued the call sign EI100MFT for the

event, MFT been the last call sign used on the original station.

On the Wednesday they will be making a special linkup with the Marconi sister station in Glace Bay, Nova Scotia. Part of this linkup will be an exchange of greetings between President Mary McAleese and Lieutenant Governor of Nova Scotia the Honourable Mayann E. Francis. The group will also be honoured to have Princess Electra Marconi present as she is visiting Clifden for the festival along with an Exhibit from the Marconi Foundation in Bologna. The Galway Radio Experimenters Club will also be presenting a display of vintage equipment.

More details on the festival can be found at www.clifden.ie. Visitors to the station are more than welcome and if you would like to participate this can also be arranged. For further information please contact Enda Broderick (II2II) on 086-8676410 or email: &#65533;enda dot Broderick at lightnet dot ie&#65533;.
{irts}

The first commercial transatlantic message was transmitted from Marconi&#65533;s Station in Clifden to his North American complex in Glace Bay, Nova Scotia almost 100 years ago. Marconi&#65533;s achievements will be celebrated with a series of Marconi Centenary commemorative events from October the 12th to the 17th in Clifden, coordinated by the Clifden Chamber of Commerce.

The celebrations include a lecture by Paul Duffy, Chartered Engineer and historian, entitled &#65533;Marconi-The Engineering Marvel&#65533;. This lecture will take place at the Clifden Station House Theatre on Sunday the 14th of October at 1 p.m. Michael Sexton, Chartered Engineer and author of &#65533;Marconi: The Irish Connection&#65533;, will give a lecture on the national aspect of Marconi&#65533;s work at the Clifden Station House Theatre on Monday the 15th of October at 1 p.m.

Professor Peter Kennedy will chair a forum entitled "Whither Wireless Communications? Marconi's Legacy in the 21st Century&#65533; on Tuesday the 16th of October at Clifden Station House Theatre. This forum will reflect on Marconi's achievements and the future for wireless communications in an era of ubiquitous connectivity.

NEWS FROM ARNEWSLINE

HAMS HELP NAB FLORIDA BURGLERS

3 Florida juveniles who allegedly used Amateur Radio gear to coordinate at least one burglary and possibly more have been taken into custody. This, after two they showed up on a wide area repeater that two hams were monitoring. One of them was a retired police officer.

It all started back on September 8th . Albert Moreschi, AG4BV, of Jupiter Farms and John Levey, KI4HTL, of Palm Beach Gardens, were listening to the repeater when some unexpected transmissions were heard. Some unlicensed operators showed up and what they were talking about caught KI4HTL's ear.

As a retired police officer, Levey, he knew what it was being discussed. So he began recording the radio transmissions from the suspects while he and Morsechi notified local law enforcement. Unfortunately, the would-be burglars didn't describe the house well enough to get the exact address.

Then on September 21st the same group of bootleggers again showed up on the repeater. It was evident to Levey what was happening, so he again began recording the transmissions while coordinating with Morsechi by cell phone.

Meantime, the owner of the house being burglarized was huddled in her bedroom closet, calling sheriff's deputies for help. They arrived on scene and the hams listening to the repeater knew it because the last transmission from the suspects was "Code Red, Code Red, Code Red. There are cops everywhere, dude!"

But for Levey, the work didn't end with the suspects arrest. He then headed to the Jupiter Farms Sheriff's Office substation where one of the suspects had been taken. KI4HTL identified himself as a former police officer and a ham radio operator. He told the deputy on duty that he had recordings of the suspects radio transmissions. The Sheriff's Office is now in possession of the tapes.

Oh yes. We forgot to mention that the repeater that the suspects chose to use has coverage Boynton Beach to Port St. Lucie. That's several hundred square miles. Its also a Citizens Emergency Response Team Repeater so there is always someone listening in.

RSGB NEWS G4NJH

The successful 3B7C DXpedition was extended for a day beyond its initial target. Operations were finally closed down at 0331z on Tuesday 25 September. The group managed a grand total of 135,718 QSOs, making it the third most-worked DXpedition of all time. Like 3B7C, the two most worked DXpeditions, D68C and 3B9C, were all operated by the Five Star DXers Association. Congratulations to all those involved.

The JOTA Story

A new publication has been announced to celebrate 50 years of Jamboree On The Air. The book is co-authored by Les Mitchell, G3BHK, Len Jarrett, VE3MYF and Richard Middelkoop, PA3BAR. A limited edition of The JOTA Story will be available shortly after the 50th JOTA on 20th and 21st October.

See http://home.tiscali.nl/worldscout/Jota/jota%20history.htm

OPERATIONAL NEWS -

October 6th to 7th
2007 Oceania DX Contest SSB

The EMDRC will be operating a portable station at Kurth's Kiln, located near Gembrook.

The Oceania DX contest has been around for many years in early October and was known previously as the VK/ZL Contest. Activity has increased over the last three years due to a huge promotional effort by a joint Australian and New Zealand Committee.

PHONE: 0800 UTC Saturday 6 October to 0800 UTC Sunday 7 October 2007

The Parks web page for Kurth Kiln is
http://svc015.wic028p.server-web.com/1park_display.cfm?park=238
the friends group is
http://home.vicnet.net.au/~fofkk/

October 13th and 14th of October
Oceania DX CW contest.

This contest is for 24 hour and start 0800 UTC Saturday 14 October to 0800 UTC Sunday 15 October 2007.

Boat Anchor Sprints:
October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

>From October 6 0000hrs UTC through 7 October 2359 UTC there is a world wide event promoting PSK31 and studying propogation on the 30 metre band..

The frequency being used 10.139.5Mhz USB

Sponsored by the amateur group PropNet the event will see a world wide net of automatic beacon like PSK31 stations which will periodically transmit ID statements.

Reception of these signals will be logged to produce a report on propagation... Details can be found on the PropNet Google group site.
The Group encourages listeners to report on reception of the signals...

Events such as this are widening the capability of amateur radio and the utilisation of the tools provided by PSK31.

Following on from PropNet, all Australian and New Zealand amateurs are invited to join together in the true Anzac spirit by participating in the first ever VK/ZL 30 Meter Digital Weekend, October 21.

This is not a contest but a casual affair promoting 30 meter Digital activity allowing those worldwide to work amateurs in VK/ZL and to see how well

propagation really does work on this band.

So if you have some spare time over the 3rd weekend in October to hop on the band and work a few stations that would be great. It is lining up to be a exciting opportunity that may turn into a annual event.

When: Starting at 0500UTC on 21 October and Ending at 2000UTC 22 October

Where: 30 meter Band 10.135 to 10.145 MHZ

Modes: Mainly PSK31 BUT all digital modes welcomed including RTTY.

Objective: To make contact with VK/ZL Stations. This is not a contest but a casual event in promoting 30 meters Digital activity in conjunction with the 30 meter PSK Group

NOVEMBER 17/18 VK Spring VHF-UHF Field Day

John Martin reports that this is a week later than in past years. The change of dates avoids clashes with some club activities that will taking place earlier in the month.

There are two minor changes in the rules:

1. Stations may enter both the 24 hour and 8 hour sections, but only if the station actually operates for more than 8 hours.
2. Changing locations: It is not in the spirit of the contest for grid-hoppers to set up more than one station and move between them. The rules now make it clear that not only the operator but also the station must be moved when operating locations are changed.

The full details are on www.wia.org.au

Sputnik 1 &#65533; a world first

Confirmation that the Soviet Union had launched the first man-made earth orbiting satellite came with a radio signal that was heard half a century ago last Thursday, October the 4th.

Around the world amateur radio enthusiasts picked up the satellite's beacon signal on a frequency of 20.007MHz.

A number of radio amateurs had their five minutes of fame through media reports of their claims of hearing the satellite.

Its history making orbit of earth had a permanent impact on many of today's baby-boomers, whose interest in space and technology was awakened by Sputnik 1,
the true beginning of man's space exploration.

Now let's listen to how Sputnik 1's weak signal was heard in October 1957 as it orbited once every 96 minutes.

(audio file sputnik1)

We acknowledge the National Aeronautical and Space Administration for that audio, first reported in Australia, according to the Mercury newspaper, by VK7YY, OIC, Hobart Radio.

The same edition of the Mercury published pictures of Len Edwards VK7LE and Crosby Welch VK7CW receiving Sputnik 1 transmissions. It was claimed that: "Hundreds of the State's hams tuned into the Red satellite".

Transmissions were on 20.005 MHz. & 40.002 MHz. and received at good volume.

The professor of physics at Sydney University said ; " the launching of the Soviet space satellite "means life or death for us freedom or the extinction of civilisation"".

That same weekend the Australian Government had planned detonation of an air blast nuclear bomb at Maralinga.

Those were interesting times and that information is from the REAST Historian also Jim Linton VK3PC

One day shy of a month after Sputnik 1 made history as the world's first man-made satellite, the Soviet Union launched Sputnik 2. This time, in addition to radio transmitters like that of its predecessor, the satellite carried the first animal into orbit, a dog named Laika

The club is already expecting 120 visitors over the weekend, please keep a listen out for the call sign, VK4SMB, that's VK4, Scouts MurrenBong.

BB's DIARY ROOM - THE FUTURE, IN AMATEUR RADIO

SOCIAL SCENE

OCTOBER 6
Gold Coast Amateur Radio Society Annual Hamfest at Albert Waterways Hall.

October 14
Annual inter-club BBQ in central Victoria.

Members of the Central Goldfields Amateur Radio Club of Maryborough, Midland Amateur Club from Bendigo, the Ballarat Amateur Radio Group and Amateur Radio Victoria will attend this event at Laanacoorie next month.

Organiser Peter Rafferty VK3CC explains that it's a BYO meat and drinks affair, with bread, butter, tea, coffee provided.

Apart from being a really great social occasion, last year's BBQ resulted in the cooperative venture - the Centre Victoria RadioFest at Kyneton.

The BBQ will be at the Laanacoorie Hall, the date Sunday the 14th of October starting at 10am.

Laanacoorie is on the Loddon River on the Eddington side of Bendigo about one third of the way between Maryborough and Bendigo.

OCTOBER 27-28
The Wagga Amateur Radio Club is this year's host for the Riverina Field Day.

The Field Day is being held on the 27th and 28th of October. So please pencil the date into your calendar.

The venue is again the clubhouse in Small St. The usual flea markets, Trade and other displays will run continuously in the hall from 9am on Sunday.

There will be a Field Day dinner to mark the opening and will be held at Clubrooms on the Saturday evening. It will take the form of a smorgasbord. Bookings are essential.

More Field Day information can be obtained from the club's website http://wagga.radiocorner.net/

Wagga Wagga is the largest inland city in NSW and is well situated halfway between Sydney and Melbourne. These days it is a very leisurely 4 and a half hour drive from Sydney's outskirts with the majority of the trip on dual lane highway. So why not plan a getaway and join us for the weekend.

For more information contact John VK2YW on 02 6926 5471 AH or vk2yw@wia.org.au

NOVEMBER 4
The Ballarat Hamvention at the Great Southern Woolshed located on the Western Highway on the Melbourne Side of Ballarat. General entry for $6:00 is from 10am. details at the BARG website
www.barg.org.au

NOVEMBER 5
The Gladstone Amateur Radio Club will hold its annual beach BBQ at Millennium Esplanade, Tannum Sands 12:00 midday. There will be a mystery auction and games as well as a few refreshing drinks in the shady picnic area by the beach.
For out-of-towners, just put in a call on 146.500 MHz or the repeater on 146.625 MHz for direction, or look for the clubs distinctive mud-crab banner. RSVP if you like via gladstone_ar_club@yahoo.com.au

NOVEMBER 11
Westlakes Amateur Radio Club Field/Market Day. Gates open 8am, close 4pm. Boot Sales, Auction, Home Brew Competition, Lee Andrews Stand plus +++

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

FEBRUARY 10

Announcing Centre Victoria RadioFest No. 2.
Second-hand traders, club corner, short-talk lectures, displays and the popular dipole factory will all return, plus some new exciting activities to be announced later.
All major commercial traders have already made commitments to be there again in 2008.
For second hand table bookings that cost only $12.50 please contact Nick Angelo VK3UCK 0488 653 201, or check out the website radiofest.amateurradio.com.au

FEBRUARY 17

CENTRAL COAST AMATEUR RADIO FIELD DAY

On Sunday 17th February 2008 the Central Coast Amateur Radio Club Field Day will again be held at the Wyong Race Course. This is the most popular field day in Australia, generally drawing about two thousand interested amateurs and electronic hobbyists each year.

Major Australian radio and electronic equipment suppliers will be in attendance with displays of the latest radio and electronic equipment for sale.

Displays will also be provided by several amateur radio clubs and special interest groups and throughout the day an interesting lecture program will be provided.

The Newcastle Embroiders Guild will also be providing craft activities throughout the day which should be of great interest to the XYL's.

The extensive car boot sale area will again be very active, providing a wide choice of goods for sale. As usual the free tea, coffee and chat area will operate but this time in a new bigger location. The various food outlets providing hot and cold sit down or take away food will also operate as usual.

As a new feature this year to promote further socialisation by those attending the field day, an Official Dinner will be held at the venue on the evening of Saturday 16th February 2008. This will be a buffet style meal with a guest speaker who will talk on an interesting radio relevant subject.

This Field Day provides the greatest opportunity for the amateur operator or electronic enthusiast to see and purchase all the latest gear in one location and meet up with a very wide range of like minded enthusiasts a great opportunity to meet up with old friends and make new friends.

More details will soon appear on the Central Coast Amateur Radio Club's web site www.ccarc.org.au.

How about you put it in your calendar as a must do event!

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 07 OCTOBER 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from the www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

Your news reader this morning is Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEYS

The Pretoria Amateur Radio Club regrets to announce that Don Blackburn, ZS6CRT, became a silent key on Tuesday after a valiant battle with cancer. Don was a past chairman of the club.

Our sincere condolences to his wife Sue, ZS6SUE, and his children Jonathan ZR6JON and Samantha.

The key of Peter Finlay, ZS5ADN, became silent on 23 September after a long illness. To his family and friends, our sincerest condolences.

Sharief Osman, ZS1SSB, affectionately known as Ozzy, passed away at the age of 42 on the 22 September 2007. our sincerest condolences to his wife Amina, 3 young children, other relatives and friends.

(PAUSE)

In the news today:

2008 SARL NATIONAL CONVENTION - A FEAST OF AMATEUR RADIO

INTECNET AND PRESIDENT'S NET TONIGHT

EXPANSION OF 40 METRE BAND

DRAFT POWERLINE REGULATION PROCESS CONTINUES

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

2008 SARL NATIONAL CONVENTION - A FEAST OF AMATEUR RADIO

The SARL National convention will be held in Bloemfontein from 11 to 13 April 2008 and promises to be a weekend of amateur radio activity South Africa has not seen for many years. The weekend will be hosted by the Bloemfontein Amateur Radio Club and will include a visit to the Boyden Observatory on the Friday evening. The Annual General Meeting will be held on the Saturday morning followed by an ARDF demonstration Hunt and various technical session covering HF, VHF and Hamnet.

Visits to the Leeuwberg museum and Onse Rust will be arranged with the Gala Awards Dinner at the Commando Restaurant. The weekend will be concluded with breakfast with a view at the ZS9X Contest station on Sunday morning.

The organising committee is working with SA Airlink to provide special travel and accommodation packages. Diarise the date now and stay tuned. Information will be available on the web soon.

INTECNET AND PRESIDENT'S NET TONIGHT

The President's net will be held this evening, 7 October, starting at 19:00 and will be followed by the Intecnet.

SARL President, Graham Hartlett, will talk about plans for the 2008 AGM and nominations for Council which are due soon. He will also discuss the procedure for affiliated clubs to offer the class B examination for their students. The full examination procedure and the necessary application forms will be available on the member pages of the web after his presentation.

The Intecnet will feature a discussion on the HMO/SARL 40 metre beacon programme led by Dr Lee-Anne McKinnell of the HMO. John Willescroft, ZS6EF, who is constructing the beacon equipment will discuss the design and operational issues. A PowerPoint presentation is available on the web at www.sarl.org.za, click on ARMI.

Clubs wishing to link their repeaters should send details of the telephone number to armi@sarl.org.za by noon today.

EXPANSION OF 40 METRE BAND

The SARL receives regular questions from amateurs about the expansion of the 40 metre band. The issue is on the top of the Agenda in our interaction with ICASA. There are however several problems to be overcome. One is that South Africa's signal distributor, Sentech, is still using that segment and will have to relocate to higher in the band. The SARL is in discussion with Sentech. In terms of the ITU agreement they have the right to continue using the spectrum till 2009.

HAVE YOU PAID YOUR SUBSCRIPTION?

Invoices were mailed in June, with follow-up reminders in August and September. If you have not yet renewed your membership, please do it as soon as possible. Members who have not remitted their dues by the end of October will no longer receive Radio ZS or have access to the member-only section of the SARL web. Your membership is important for Amateur Radio; it is our collective voice through the SARL, the national Body for Amateur Radio, which needs to be strong and representative. Your membership makes that difference. If you are not a member yet, it is never too late to join. Application forms are available on www.sarl.org.za.

DRAFT POWERLINE REGULATION PROCESS CONTINUES

At the SABS TC80 meeting on Thursday ICASA informed the committee that the draft regulations for PLT, Power Line Telecommunications, will be tabled for discussion at the Standards Liaison Committee this coming Thursday. The SARL was part of the drafting of the interim regulations and made several demands that for example all amateur HF bands are permanently notched. The SARL's position was noted but in the final draft to be discussed by the SLC no notching was included. Positive aspects of the draft regulations are the inclusion of an interference mitigation process and the requirement that a public accessible data base of PLT installations be maintained. PLT vendors must also give notice of planned installations.

The SARL made further representation to ICASA that International experience has shown that interference standards based on FCC limits are inadequate and will lead to unnecessary mitigation processes. A recent report from the ARRL laboratory pointing out the inadequacy of the FCC standards was also submitted.

At the TC80 meeting several additional problems were highlighted which will be discussed by the Chairman of the TC80 workgroup on EMC at the SLC meeting which he has been invited to attend.

After the final draft is agreed at the SLC, the draft regulations will be published in the Government Gazette for comment. The SARL is preparing its comment based on current known aspects of the draft regulation and will fine tune its objections once the final draft has been published. It is expected that the SARL will also attend public hearings.

AMATEUR RADIO DIRECTION FINDING - SARL RECOMMENDS THE 80 m APPROACH FOR NOW

At last week's Council meeting the future participation of South Africa in the ARDF - Amateur Radio Direction Finding competitions held annually by the IARU in Europe was discussed. On recommendation of the IARU ARDF committee chairman, Reinhardt Floesser, it was decided to first tackle ARDF on 80 metres. The reason for this is that on 2 metres too many reflections occur which for the newcomer presents problems in a multi transmitter competition which is the IARU standard. Later on 2 m ARDF will be added. The international competitions are presented in

two categories, HF and VHF.

The SARL is studying the various circuits and kits available and would welcome input from clubs and individuals. Please send your comments to zs4bs@netactive.co.za. An Intecnet with Rhynhardt Floesser is being planned for 25 November.

JOTA AND JOTI 20 TO 21 OCTOBER

Dave Gemmell, ZS6AAW, SA National JOTA Co-ordinator makes it known that Jamboree-on-the-Air, JOTA, and Jamboree-on-the-Internet, JOTI, will take place on 20 and 21 October.

Many thanks to Evan Davies, ZS6EVD, Eddie Leighton, ZS6BNE, and Lichtenburg ARC who planned, and will be operating as, ZS50MAF, in Mafikeng.

This year's is the 50th JOTA and 11th JOTI and it's not too late to arrange a JOTA station which can be put together in an hour or two!

If you had not been approached by scouts, invite them for a day or week-end to do experiments with antennas and contact local and overseas JOTA stations. Introduce them to different modes such as , CW, RTTY PSK 31, ECHOLINK, Skype, etc. from your club house, home or where ever.

Remember, register your station as an educational station with the SARL at least 7 days before the main event so that your unlicenced guests may also use your transmitting equipment under your guidance and derive maximum enjoyment from the event. Forms for this purpose are available on www.sarl.org

More international info. can be found on www.jota.org or www.jotajoti.org

SPRING QRP SPRINT RESULTS

Nine logs were received for the Spring QRP Sprint held on Sunday 9 September, 4 in the 5 watt class and 5 in the 1 watt class. The results are as follows

5 Watts: 1st Vidi, ZS1EL 2 992 points; 2nd Ruaan, ZS6RMS 1 600 points; 3rd Oakdale ARC, ZS1OAK 1 540 points; 4th Allen, ZR1AAH 864 points.

1 Watt: 1st Jan, ZS4JAN 15 120 points; 2nd Andre, ZS2ACP 12 960 points; 3rd Pam, ZS6APT 3 960 points; 4th Pierre, ZS6BQS 2 520 points; 5th Franz, ZS6EU 640 points.

Congratulations to the winners.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general increasing to unsettled levels on 17 till 19 October. The expected Effective Sun Spot number for the coming week will be less

than 5. Fortunately with the arrival of summer DX conditions are also warming up a bit.

15 m and 20 m will provide best opportunities for DX. There is a possibility of 15 and 20 m openings towards India from about 10:00 CAT. There may be 20 m openings to Australia from about 06:00. From 16:00 there may be 15 and 20 m openings towards Europe. From 18:00 there may be 15 and 80 m openings towards the USA.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m is going to be good during the day and even 30 m may perform well over the longer distances.

It is once again time to work towards your 80 m WAZS award in the evenings. Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

7 October, tonight - President's Net and Intechnet; 18 October - Class A RAE; 20 October - Comments on SARL 2008 Competition Handbook to be in; 20 and 21 october - JOTA and JOTI;

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by George, ZS6NE, and transmitted by (your name and call sign).

Thank you for listening. 73.

Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

"Congratulations to Mike Hale, VE7DXD, who has been elected British Columbia Section Manager for a two-year term of office that begins November 1, 2007. Mike was elected through mail-in ballot by a two-vote margin.

RAC Vice President for Field Services Bob Cooke, VE3BDB, extends thanks to Mike for his support of Radio Amateurs of Canada which he displayed by standing in nomination for BC SM, and to out-going Section Manager Drew Watson, VA7DR, for his strong leadership and promotion of our national organization, particularly of the RAC Amateur Radio Emergency Service. The election results indicate that both men enjoy wide recognition and support in BC Section."

Thanks.

73,

Bob
ve3bdb

1 GB2RS NEWS Sunday 7 October

The news headlines

* HFC next weekend

* Train the Trainers course looms

* DFCWi used for EME contact

HF enthusiasts are reminded that the RSGB HF Convention takes place next weekend, 12 to 14 October. The closing date for booking accommodation packages and evening meals is 11am on Wednesday 10 October. You can of course just turn up on the Saturday or Sunday as a Day Visitor. Lunches are available without pre-booking. The RSGB HF Convention, sponsored by Icom and Martin Lynch & Sons, is the world's premier HF event of its type and an experience not to be missed by the serious operator.

A reminder to registered tutors that the RSGB's Train the Trainers scheme will run again shortly. The course, by Alan Betts, G0HIQ and Brian Reay, G8OSN, takes place on Sunday 21 October in Motherwell. For more information, or to register, contact RSGB Region 1 Manager Gordon Hunter, GM3ULP, as soon as possible. He can be contacted by email to gm3ulp@aol.com or by telephone on 01698 253394.

Last week GB2RS reported that 10GHz beacon GB3SCX was running an experimental mode, Dual Frequency CW with ident, or DFCWi. The world's first 10GHz EME contact using this mode has now been achieved. On 27 September, members of the Flight Refuelling Amateur Radio Society worked UK Microwave Group Chairman Brian, G4NNS, via DFCWi. Conventional CW was used to make initial contact. The DFCWi experiment took place using PC generated tones fed via a mic to a 2m SSB radio connected to a 3cm transverter. Both stations were using 12ft prime focus parabolic dish antennas, with 13W at G4RFR and 18W at G4NNS.

The RAYNET Convention and AGM will take place on Saturday 3 November at the East Sussex Fire and Rescue Headquarters, Eastbourne. Doors open at 9am and there will be presentations from 10am. The AGM starts at 2pm, and will be followed by an open forum. Disabled parking places are limited and should be reserved by contacting Dick.Jeffries@raynet-uk.net.

And now for the details of rallies and events for the coming week [Note to newsreaders: Please use your judgement on whether to read the 7 October event, based on your time slot and distance from the event.] On

Sunday 7 October Nantwich Bunker Trust are having a surplus electronic and electrical sale. The sale starts at 10.00 at French Lane, Nantwich, Cheshire. For more information log onto www.hackgreen.co.uk/.

On Saturday 13 October the GB3EE repeater group rally takes place at the Calow Community Centre, Chesterfield. For more information contact Steve, G6IBQ, on 0844 414 2056 or email steveg6ibq@aol.com.

2 On Sunday 14 October Great Lumley Amateur Radio Club are holding their rally from 10.00 at the Great Lumley Community Centre. For more information contact Nancy Bone, G7UUR, on 0191 477 0036 or email nancybone2001@yahoo.co.uk. More details of these and future events can be found on pages 88 and 89 of the October edition of RadCom. Now for the news of special events John Howard, G0BUV, will be operating special event call sign GB8CMC from Birmingham until 9 October. The event is celebrating the 800th anniversary of the Coleshill Market Charter. The Charter was awarded by King John in 1207. Warrington Amateur Radio Club will be celebrating its 60th anniversary year by operating the special call sign GB6WRS throughout the month of October. The station will be active on all bands each day of the month. The Border Rievers Amateur Radio Society will be operating as GB4NTC on the 13 October, at Gragside House Rothbury. The station will be on the air from 1000 till 1800, operating on HF, VHF and UHF on voice and CW modes. Full details for the event can be found on their website www.brars.co.uk. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Andrew, G7COD, will be operating using 8Q7AK from the Island of Embudu, Maldives until October 12. He will be using SSB with a little CW on 30 to 12 metre bands. For more information check 8Q7AK on qrz.com. Javier, HR2J, will be running a one man expedition from 7 October to 8 November, and he expects to operate as HQ8R on all bands for at least four hours a day. Further information can be found on qrz.com under HQ8R. QSL direct to HR2J. Tom, DL2RTK, will be signing SD7T until 13 October activity from Ven Island, EU-137. The operators are Fred, SM7DAY, SM7DAY/7, Frank, DL2SWW, SD7W and Ric, DL2VFR, SD7V. QSL via home calls, bureau preferred. Richard, G3RWL, will be active as 8P6DR from Barbados, NA-021, WLOTA LH-0999, until 14 October. He plans to operate CW and digital modes on 80 to 10 metres. QSL via G3RWL, direct or bureau, e-mail requests for bureau cards to g3rwl at amsat.org. Look for Ermanno, SV0XAN/5, to be active from the islands of Lipsi, Agathonisi and Arkoi, Dodecanese, EU00 until 20 October. QSL via IK2WZD. Christoph, DK2CRN, (VK2AM) and George, DL1ECG, (VK2ALU) will be active from Australia on 9 to 27 October. QSL via home calls, direct or bureau. The W5 National Wildlife Refuge ARC will operate from the Hagerman National Wildlife Refuge on 12 to 14 October. This operation coincides with the National Wildlife Refuge Week and is in support of the KP1-5 Project and the US national wildlife refuge system. Look for W5NWR on SSB, CW, RTTY and PSK on frequencies of opportunity. QSL via NA5U. Other stations will be operating from wildlife refuges across the nation.

3 Now the contest news The RSGB 21/28MHz Contest takes place on 7 October from 0700 to 1900 on CW and SSB. The exchange takes the form of RST, serial number and district. The RSGB 432MHz activity takes place on 9 October from 2000 to 2230 local on all modes. The exchange takes the form of RST, serial number and locator. The second sprint contest organised by the RSGB Contest Committee will take place on Wednesday 10 October. The sprint format requires stations to QSY often, and not maintain a run frequency. That means that different skills and operating styles are needed compared with a traditional contest. The contest is for the SSB event on 3.600 to 3.650MHz from 1900 to 2030 UTC. The exchange consists of callsigns, serial number, and the operator's name or nickname. Full details, including the important QSY element, can be found at www.rsgbhfcc.org. The Oceania DX Contest takes place from 0800 on 13 October to 0800 on 14 October on 1.8 to 28MHz bands, CW only. The exchange takes the form of RST and serial number. The EU Sprint Contest takes place on 13 October from 1600 to 1959 on 3.5, 7 and 14MHz bands on CW. The exchange takes the form of both callsigns, serial number, name and nickname. The RSGB 50MHz Contest takes place on 14 October from 0900 to 1200 on all modes. The exchange takes the form of RST, serial number, locator and postcode. Now the solar factual data for the period from 24 September to 30 September, compiled by Neil Clarke, G0CAS Without any warning a small sunspot group emerged ending a 21 day spell when the solar disc was spotless. However, solar activity continued at very low levels. Solar flux levels increased slightly from 66 units to 68 by the 29th. The average was 67 units. The 90 day solar flux average on the 30th was 69 units, that's the same level as last week. X-ray flux levels remained below the minimum level throughout. Geomagnetic activity started at quiet levels but on the 27th as forecast a coronal hole disturbance commenced which lasted through to the 30th. The most disturbed day was the 29th with an Ap index of 26 units. The average was Ap 14 units. The ACE spacecraft saw solar wind speeds increase from 370 kilometres per second on the 27th to peak at 720 kilometres per second on the 30th. Particle densities were low except for the 27th and the 28th which increased to 10 particles per cubic centimetre. Bz varied between minus and plus 2 nanoTeslas on the 26th which was the quietest day and between minus 10 and plus on the most disturbed day.

Particularly during the periods of increased magnetic activity the higher HF bands were in very poor shape and only 14MHz showed anything more than occasional sparkle. Even that band opened later and closed earlier than in recent weeks. However, good openings to Australia and New Zealand were reported on 3.5 and 7MHz, with at least one strong opening on 3.5MHz to W6 around 0600UTC. This was a reminder that, for seasonal reasons, and because we are at the bottom of the solar cycle, low-band conditions should be particularly good. The modest increase in geomagnetic activity on the 28th and 29th gave rise to a handful of auroral reports, mostly from North America.

4 And finally the solar forecast. This week solar activity is expected to continue at very low levels. The solar disc could be spotless on some days. Solar flux levels should be in the high 60's throughout the

period. With the absence of any coronal holes on the earthward side of the Sun this week geomagnetic activity is expected to be quiet everyday. MUFs during daylight hours at equal latitudes should be around 19MHz for the south and 16MHz for the north. The darkness hour lows should be about 8MHz. Paths this week to South Africa should have a maximum usable frequency with a 50 per cent success rate will be around 24MHz. The optimum working frequency with a 90 per cent success rate will be about 19MHz. The best time to try this path will be between 0900 and 1800 hours UTC. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Monday 8 October Basingstoke Amateur Radio Club is having a club meeting. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 8 October Coulsdon Amateur Transmitting Society is having a talk on artificial intelligence by Steve, G7SYO. Contact Andy, G8JAC, on g8jac@btinternet.com.

On Monday 8 October Felixstowe and District Amateur Radio Society is having a fish and chip supper at The Victoria, Felixstowe Ferry. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Monday 8 October Surbiton Heritage Amateur Radio and Electronics Society is having a presentation by Surrey RAYNET. Contact Tony, G7DGW, on g7dgw@shares.uk.net, or on the web at www.shares.uk.net.

On Tuesday 9 October Harwell Amateur Radio Society is having a talk on contest logging and SD software by Martyn Preston, G0THY. Contact Martyn, G0THY, by email to g0thy@btinternet.com.

On Tuesday 9 October Stevenage and District Amateur Radio Society is looking at photographs from members archives. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 10 October Aylesbury Vale Radio Society Club is on the air and having a discussion evening. Contact Roger, G3MEH, on 01442 826 651, or by email to roger@g3meh.com.

On Wednesday 10 October Chesham and District Amateur Radio Society is having a technical talk about the new club HF and VHF antennas, by Terry, G0VFW. Contact Terry, G0VFW, on 01442 506 344, or by email to

terry.g0vfw@ntlworld.com.

On Wednesday 10 October Dover Radio Club is having a talk on Windows Vista by Matt, M1CMN. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 10 October Fareham and District Amateur Radio Club is having a talk on digital signal processing by G0UUS. Contact Ken, M0KLS, on 02392 797 240.

On Wednesday 10 October Farnborough and District Radio Society is having part three of the talk on Morse appreciation by Derek, G3HEJ. Contact Colin, M3IHS.

On Wednesday 10 October Harwich Amateur Radio Interest Group is having a lecture: "Help! I'm being shot at!" by Rick Speller, G3LZR. Contact James, M0ZZO, on 01255 242 746.

On Wednesday 10 October Havering and District Amateur Radio Club is having an informal evening. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 10 October Norfolk Amateur Radio Club is having a table top sale. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

6 On Wednesday 10 October South Essex Amateur Radio Society is having a talk on ISS packet radio or an amateur radio video with Dave, G4UVJ. Details on the web at www.southessex.ARS.btinternet.co.uk, or by email to southessex.ARS@btinternet.com.

On Wednesday 10 October Worthing and District Amateur Radio Club is having its AGM. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 11 October Reading and District Amateur Radio Club is having its annual construction contest, hosted by Robin Caine, G4IWS. Contact Pete, G8FRC, on 01189 695 697, or on the web at www.radarc.org.

On Thursday 11 October Shefford and District Amateur Radio Society is having a discussion on the theme of "how big is your carbon footprint?". Contact David, G8UOD, on 01234 742 757.

On Thursday 11 October Southgate Amateur Radio Club is having a junk sale. Contact Erik, 2E0ECR, on 0208 444 3247.

On Friday 12 October Loughton and Epping Forest Amateur Radio Society is having a VHF night on the air. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

On Friday 12 October Mid-Sussex Amateur Radio Society is having a radio night. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 12 October Wimbledon and District Amateur Radio Society is on the air and having a construction night. Contact Jim, M0CON, on 020 8874 7456.

On Sunday 14 October Southdown Amateur Radio Society is operating at the Beachy Head Site. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

NEWS FOR THE SOUTH-WEST On Monday 8 October Cornish Radio Amateur Club is having a meeting of the computer section with a talk by Clive, G3OCB, on computer security. Contact Ian, 01872 561 058.

On Wednesday 10 October South Bristol Amateur Radio Club is having its autumn table-top sale. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 10 October Taunton and District Amateur Radio Club is on the air from the club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 10 October Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 11 October Yeovil Amateur Radio Club is having a talk by T Woollards on Somerset Raynet. Contact Gary, 2E0BFJ (g.swain@tesco.net).

NEWS FOR THE MIDLANDS The recently announced vacancy for an RSGB Deputy Regional Manager covering South Derbyshire & South Nottinghamshire remains unfilled. If you live in the area and would like to help the RSGB's Regional Team to strengthen relationships between the Society and its membership, please contact Regional Manager Jim Stevenson, G0EJQ, on 0789 172 1081 or by email to g0ejq@rsgb.org.uk.

On Monday 8 October Gloucester Amateur Radio and Electronics Society is having a workshop and HF operating evening. Contact Anne, 2E1GKY, on 01452 548478, daytime.

7 On Monday 8 October Stratford Upon Avon District Radio Society is having a talk on the history of radio manufacturing by M3NDZ. Contact Jack, G3VYE, on 01926 641 988.

On Tuesday 9 October Loughborough and District Amateur Radio Club is having its AGM. Contact Chris, G1ETZ, on 01509 504 319.

On Wednesday 10 October Telford and District Amateur Radio Society I shaving a hamfest debrief, feedback and idea sharing session. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Friday 12 October Hucknall Rolls-Royce Amateur Radio Club is having a talk and demo on the National HRO by Tony Ferraioli. Details on the web at www.hrrarc.com.

NEWS FOR THE NORTH OF ENGLAND

On Monday 8 October Sheffield Amateur Radio Club is having a talk on Echolink by M1ERS. Contact Trevor, M0TWS.

On Monday 8 October Thornton Cleveleys Amateur Radio Society is having its construction competition. Contact Jack, G4BFH, by email to

jack.duddington@btinternet.com.

On Tuesday 9 October Wakefield and District Amateur Radio Society is having a pie and pea supper at HQ. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Wednesday 10 October Great Lumley Amateur Radio And Electronics Society is preparing for its rally. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 10 October Hornsea Amateur Radio Club is having a digital picture show with Steve, 2E0NSQ, at the Old Mill Club House. Contact Steve, G4GPY, on 01482 860 440, or by email to g4gpy@eddiesplace.karoo.co.uk.

On Wednesday 10 October Mid-Cheshire Amateur Radio Society is having a review of the 'super crystal set' build and moving on to the next stage of construction. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Friday 12 October South Manchester Radio and Computer Club is having a talk on railway telegraphy by Jim, G3KAF. Contact Ron, on 0161 969 3999.

On Friday 12 October Tynemouth Radio Club is having a Morse and operating night. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 13 October Wakefield and District Amateur Radio Society is running its Foundation Licence course. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Sunday 14 October Great Lumley Amateur Radio And Electronics Society is holding its rally at the Great Lumley Community Centre. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

NEWS FOR SCOTLAND

On Sunday 7 October Cockenzie and Port Seton Amateur Radio Club is taking part in the RSGB 21/28MHz contest. Contact Bob, GM4UYZ, on 01875 811 723.

On Monday 8 October Lothians Radio Society is having a surplus equipment auction at the Royal Ettrick Hotel. Contact Toby, MM0TSS, on 07739 742 367, or by email to enquiries@lothiansradiosociety.com, or on the web at www.lothiansradiosociety.com.

8 On Thursday 11 October Aberdeen Amateur Radio Society is having a construction and on the air evening. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Friday 12 October West Of Scotland Amateur Radio Society is having a club night. Details on the web at www.wosars.org.

On Saturday 13 October Moray Firth Amateur Radio Society is having its autumn junk sale at the Scout Hall in Fochabers. Contact Jim, MM0SMD, on 01340 820 134.

NEWS FOR WALES No news items have been received for Wales this week.
NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

1652. Amateur Radio Newsline(tm) Report 1573 - October 7, 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-10-07 15:40:17 UTC
From: "William M. Pasternak" <newsline@ix.netcom.com>
Message-ID: <E1IeY5u-0005g8-4s@elasmtp-banded.atl.sa.earthlink.net>

Amateur Radio Newsline(tm) Report 1573 - October 7, 2007

Amateur Radio Newsline report number 1573 with a
release date of Sunday October 7, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. The U-S Postal Service
deals a blow to radio reading services -- even
some that help hams. Also, two life sentences
for the first convicted in the Hawks murders at
sea and the ARRL disqualification of Carl
Gardenias, WU6D, to run for Director leads to an
investigation backed by an on-line giant. Find
out the details on Amateur Radio Newsline(tm) report
number 1573 coming your way right now.

ASSISTED RADIO LIVING: HIGH POSTAGE RATES COULD DOOM CASSETTE-CASTERS

If you are a visually impaired radio amateur and
get your ham radio news or any information from
radio reading services, listen up. A recent
postage increase in the United States may doom a
lot of the cassette based reading
services. Services that cannot mail using the
Postal Services Free Matter category, and which
do not have some other way to generate
revenue. Several tape based reading services
have hinted that they will close their doors in
December once there are no longer any funds for
postage. Fred Vobbe, W8HDU, has more:

--

Recently, we were dealt a great disservice by the
United States Postal Service. The cost to mail a
cassette tape has increased from 63 cents to $1.30.

According to the USPS, the issue is that the
postal regulations have changed. Any item
thicker than 1/4 inch is now subject to this new higher rate.

Ironically, its now cheaper to send a tape
Canada, the United Kingdom or even Kuwait, than

it is to someone right down the street from me. Go figure.

Now, I am a member of the Lions Club, and I have
talked to several other magazines-on-tape. This
postage increase has been hurting a lot of cassette tape magazines.

Those that are not sending "Free Matter" and are
not subsidized, either have to pass their costs
on to their subscribers, or they go out of business.

I'm Fred Vobbe, W8HDU.

--

Statistically 10 million people in the United
States are "legally" blind or visually impaired.
However, the number of people ages 15 and older,
with a limitation in sight, who use a computer
regularly is a bit under 1 million. This makes
audio distribution to this group of citizens a
problem to not for profit content
providers. Amateur Radio Newsline stopped its
cassette mail-out service almost 20 years ago. (W8HDU, NRCDXAS)

**

RADIO JUSTICE: WOMAN SENTENCED IN HAM RADIO YACHT SLAYINGS
A Long Beach, California, woman has been
sentenced to two terms of life in prison without
the possibility of parole. This, for her role in
a plot involving her husband and others to kill a
retired ham radio couple and steal their 55-foot yacht.
26 year old Jennifer Deleon was convicted last
November of two counts of first- degree murder in
connection with the November 15, 2004, slaying of
retired probation officer Thomas Hawks, KD7VWJ,
and his 47-year-old wife, Jackie, KD7VWK. A jury
also found special circumstances of murder for
financial gain and multiple murder, making
mandatory the life without parole sentences.
Mrs. Deleon was tried separately from her
husband, Skylar and three other men indicted in
the case. Skylar Deleon will be tried in January
along with John Fitzgerald Kennedy. Prosecutors
are seeking the death penalty against the two
men, describing them, respectively, as the brains
and brawn behind the murder for profit plot. (OC
Register and other media reports)

HAM RADIO POLOTICS: ARRL EXEC UPHOLDS WU6D DISQUALIFICATION

A follow-up to our recent story revolving around the controversy in the ARRL Southwestern Divisions race for Director. The League's Executive Committee says that it has completed its consideration of the appeal filed by Carl Gardenias, WU6D, of the decision of the ARRL Ethics and Elections Committee. That decision disqualified him as a candidate for Director.. The Executive Committee says that based on its own independent review, it has voted unanimously to affirm the decision of the Ethics and Elections Committee.

According to the ARRL Letter, this decision was communicated to WU6D on October 1st, along with detailed findings of fact and conclusions of the committee. The Executive Committee is meeting as we go to air and says that it will release additional information after the meeting.

But it may not be over yet. At least not as far as Carl Gardenias, WU6D, is concerned. He is now taking the fight over his disqualification to the ham radio community. WU6D has created a website on which he has posted in chronological order all communications on this matter between himself and the ARRL. Also posted is the letter of complaint penned by incumbent Director Dick Norton, N6AA, that lead to Gardenias disqualification. It's quite an interesting story for anyone who follows ARRL politics. You can find it in cyberspace at www.wu6d.com (ARRL, others)

**

HAM RADIO POLITICS: AZ AND CA HAMS LAUNCH PROBE INTO WU6D DISQUALIFICATION

Meantime it appears as if the QRZ.com website and its founder Fred Lloyd, AA7BQ, are assisting into an independent inquiry of the Carl Gardenias, WU^D, disqualification.

Writing on his website, Lloyd says that a small group of hams in Arizona and Southern California are conducting an independent fact finding inquiry of their own. This, to determine whether there is more to the WU6D disqualification story than has been made public.

Lloyd is asking anyone with credible information about this event to please send an e-mail to the investigatory team at HamNews@yahoogroups.com. He asks that you include evidence or a statement as to why you believe your information is factual and true. Also, to please include your original sources when possible.

Lloyd ays that those what want their message to
be anonymous, put the word ANONYMOUS in the
subject line and Lloyd says that your identity will be kept confidential.

More about this independent inquiry into the
disqualification of Carl Garnenias, WU6D, to run
for ARRL Southwestern Division Director is on the
front page of www.qrz.com under the title of
"Trouble in River City." (QRZ.COM)

**

RADIO LAW: PALMDALE CA. ORDERS HAM ANTENNAS TAKEN DOWN

A Palmdale, California, ham has had his permits
to install an antenna on his property
revoked. This, after neighbors complained that
his ham radio operations were interfering with
their consumer electronic equipment and posed a threat to their safety.

Heeding complaints from these residents, the
city's Planning Commission voted unanimously
Thursday, September 27th to revoke the
minor-modification permits obtained in 2005 by
Alec Zubarau, WB6X, to erect a tower and
antenna. Asoka Herath, Palmdale's director of
planning says that the vote means Zubarau will
have 10 days to ask the City Council to overturn
the commission's ruling. The decision
also means that within 14 days, Zubarau must
cease using the tower and any antennas that now are considered illegal.

Zubarau will be allowed to re-apply to the city
for any permits he would need to legally install
and use other antennas. If the commission's
decision is appealed but upheld by the City
Council, Zubarau will have to dismantle the
antenna tower he constructed earlier.

Earlier this year, Zubarau's neighbors came to
the city alleging his radio transmissions were
interfering with the television, radio and
telephone reception. In response, Zubarau said
his radio equipment met all standards set by the
Federal Communications Commission and should be
having no effect on his neighbors. Zubarau's
attorney Fred Hopengarten, K1VR, is quoted in
news reports as saying that if interference were
a problem, it would be up to those neighbors to
find, acquire and install interference-eliminating equipment.

At least 10 people, including three attorneys,
spoke in Zubarau's defense. They advised the
planning commission any interference by the city

with the operation of a ham radio station could violate federal regulations. Attorney Pamela Royce, W6PNW, told the commission that it should consider very carefully the cost of possible litigation if Zubaru is forced to take his antennas down or is forced off the air. (AV Press and others)

WORLDBEAT: IARU REGION 2 CONFERENCE COMPLETES BUSINESS

The IARU Region 2 Conference we recently reported on has completed its work. According to a report from Radio Amateurs of Canada, several recommendations from the Region 2 Working Group on Emergency Communications were adopted. These include establishing an Emergency Communications Committee that will be responsible to the Executive Committee for carrying out planning, training, and the maintenance of equipment and personnel inventories for emergency assistance deployment.

Also, a Region 2 Relief Fund was established with an initial transfer of US$5,000.00 from the general reserve of Region 2, with additional contributions to be solicited. The Fund will be administered by the Executive Committee and will be available solely to assist Region 2 member societies whose club stations and buildings, including antenna systems, are damaged by natural disaster.

Band-planning was another hot topic with a new Region 2 band plan for 160 through 10 meters was adopted. It becomes effective on January 1, 2008 and is modeled on one adopted previously by IARU Region 1, with regional differences taken into account. Steps were also taken to try to reduce interference to national emergency nets, including establishing an inventory of such nets and calling their importance to the attention of the radio amateur community.

An offer by Radio Club Argentino to be
responsible for translation into Spanish of the
IARU Region 2 electronic bulletin was
accepted. The Conference also accepted the offer
of the Club de Radio Aficionados de El Salvador
to host the 17th General Assembly in 2010.

The conference held in Brazil was attended by 40
delegates and observers representing 18 countries
in the Americas. 11 were there in person and 7 by proxy. (RAC)

**

RESCUE RADIO: THE ARRL GOES TO MARS

The ARRL now has a new Emergency Communications
tool in its toolbox. It's the Military Affiliate or MARS call sign
AAN1ARL.

The League's MARS station will be housed at W1AW,
the Hiram Percy Maxim Memorial
Station. According to W1AW Station Manager Joe
Carcia, NJ1Q, the AAN1ARL call sign was requested
to reflect both the holder of the license and the
various MARS services. (ARRL)

**

RADIO LAW: FCC PROPPOSES UNLICENED DEVICES ON UNUSED DTV CHANNELS

The Federal Communications Commission is
considering allowing unlicensed radio devices to
operate on locally unused broadcast TV
channels. The proposals are intended to allow
what the Commission terms as the development of
new and innovative types of unlicensed broadband
devices and services for businesses and
consumers. This, by utilizing vacant spectrum
that the FCC says to be particularly well suited for these purposes.

The cable TV industry has expressed anxiety that
such devices could cause interference to
television receivers connected directly to a
digital cable TV service without the use of a
set-top converter box. The concern exists
because the portion of TV spectrum that is not
used for TV broadcast in a given local area is
still likely to be used within the cable-TV transmission system.

The cable industry says that depending on the
effectiveness of shielding of a TV receiver's
tuner, emissions within an unused broadcast
channel could potentially cause co-channel
interference to a TV receiver tuned to a digital

cable channel that overlaps that same
spectrum. The FCC's Office of Engineering and
Technology recently published a report on tests
to investigate this issue. (FCC, RW)

**

RADIO TECHNOLOGY: CITADEL TURNS OFF IBOC

Citing many complaints from listeners, Citadel
Broadcasting, the parent company of ABC Radio
network, has instructed all 10 of it's A-M
affiliates who had already converted to In Band
On Channel or IBOC digital, to cease night time use of the modulation
scheme.

Some complaints came from listeners of the IBOC
modulated stations. Others came from listeners
of adjacent channel stations, that were being
interfered with due to the bandwidth required fot digital operations.

Citadel's Director of Engineering is Marty
Stabbert. He's quoted as saying that due to the
lackluster performance, limited benefit and
various reports of significant interference,
Citadel is suspending nighttime IBOC operations.
He then directed the stations to reinstate their
previous procedures for daytime-only
Iboc operation as soon as possible. Daytime
IBOC for the ABC network affiliates is not affected at this time. (CGC)

**

RADIO ACCIDENT: TOWER WORKER KILLED IN FALL

Tower worker Daniel Plants of Triadelphia, West
Virginia fell to his death on Sept. 24th. This,
while working alone to dismantle a storm damaged
radio tower in East Deer Township, Pennsylvania.

According to press reports, Plants was an
experienced tower climber who worked regularly on
sites in the Pittsburgh area over the past 30
years. He was about half-way up the 200-foot
tower when he fell. Although he was wearing a
safety harness and other rigging gear, it was
unclear if it was attached to the tower at the time of the fall.

OSHA is investigating the accident. The tower is
owned by gospel station WGBN AM based in a suburb of Pittsburgh. (CGC)

**

RADIO RULES: NEW US 500 KHZ LICENSE

Richard Dillman from the Maritime Radio Historical Society reports a new United States class 1A common carrier Morse code coast station has been licensed by the FCC. Station KDR has been licensed to James A. Dalke in Bellevue, Washington. Dalke is a broadcast engineer who just happens to have a 5kW Medium Frequency transmitter. KDR is licensed for operation on 500Khz and 482KHz at 5 kW. Two people made applications. Dalke's was granted on September 24th. (Various)

**

RADIO ON LINE: BETTER AUDIO WANTED

More and more, the home audio experience is happening via the family computer. This, according to the Consumer Electronics Association which says that almost three quarters of online adults in the United States are using home computers to listen to audio content,.

While most home PC audio users are satisfied with the audio experience, more than a third want better sound quality. When forced to choose between having a quality audio experience and owning a large number of audio files, almost half of home PC audio users chose quality over quantity the research stated. (RW)

**

THE SOCIAL SCENE: NEAR-FEST IN NH ON OCT 12 - 13

The New England Amateur Radio Festival is slated for on Friday October 12th and Saturday October 13th at the Deerfield Fairgrounds in Deerfield, New Hampshire. Convening in May and October, the NEAR-Fest celebrates the wonderful art and science of Amateur Radio. And as General Chairman Michael Crestohl, W1RC, tells us this years proceeds will be used to fund a very special project:

--

W1RC: "The proceeds from this one are going to finance an Amateur Radio Station at the Christa McAuliffe Planeterium in Concord New Hampshire."

--

Cresthol says that the planetarium staff are very excited at the prospect of having a radio station they can exhibit and operate. They also hope too use it to communicate directly with the

International Space Station and other NASA
facilities. A local area radio club has offered
to represent NEAR-Fest and assist Planetarium
staff members become licensed and proficient in the use of the equipment.

Again, that's the NEAR-Fest slated for October
12th and 13th at the Deerfield Fairgrounds in
Deerfield, New Hampshire with the proceeds going
to the establishment of a new Amateur Radio
station at the Christa McAuliffe Planeterium in
Concord New Hampshire. More is on-line at http://near-fest.com (W1RC)

**

THE SOCIAL SCENE: AMADOR CTY ARC SWAP MEET OCT 13 IN CA

On the other side of the country, California's
Amador County Amateur Radio Club holds its Swap
Meet on Saturday, October 13th. The location is
thre Martel Jackson area with talk-in on the
146.835 MHz repeater. For more information e-mail ae@volcano.net (E-mail)

**

THE SOCIAL SCENE: THE THIRD ANNUAL PARIS TEXAS HAMFEST

Also on Saturday October 13th is the Paris, Texas
Hamfest. Its being held at the Red River
Fairgrounds in Paris beginning at 8 a.m. local
time. This one has free parking, an indoor flea
market, forums, ham radio testing and lots
more. Talk-in is on the 147.040 MHz
repeater. It requires a 100 hertz sub audible
access tone. For more information contact
Richard Lenoir, KI5DX, at hi callbook address. (E-Mail)

**

RADIO HONORS: DARA TO PUBLISH FALLEN MILITARY HAM MEMORIAL

The Dayton Amateur Radio Association is looking
to honor silent key operators who have died in
service during the conflicts in Afghanistan or
Iraq. According to the ARRL Letter, DARA is
looking to publish a memorial page in the
Hamvention 2008 program. One that will list
these fallen hams by name, call sign, branch of service, rank and unit.
(ARRL)

**

RADIO HONORS: ARRL INVITES NOMINATIONS FOR 2007
INTERNATIONAL HUMANITARIAN AWARD

Nominations are being solicited for the 2007 ARRL International Humanitarian Award. The honor is presented to a ham or group of hams who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio.

Nominations should include a summary of the nominee's actions that qualify the individual or individuals, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. Nominations should also include the names and addresses of all references.

All nominations and supporting materials must be submitted in writing in English to the ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA. Nomination submissions are due by December 31st of this year. (ARRL)

**

NAMES IN THE NEWS: WA4SXM NAMED AMSAT VO FOR USER SERVICES

AMSAT President Rick Hambly, W2GPS, announced the appointment of Gould Smith, WA4SXM, to the position of AMSAT Vice President of User Services. In his new position Smith will serve on the Executive Team and will be responsible for the leadership of a team that will include the management of the AMSAT Journal. He will also oversee the AMSAT New Service, the AMSAT HF radio nets, Field Operations, Awards and Contests, the Dayton Hamvention display and other duties as may be assigned by the President or the Board. (ANS)

**

NAMES IN THE NEWS: VE7UQ IS NEW MANAGER FOR INCOMING QSL BUREAU FOR BC

Ken Clarke, VE7UQ, is the new Incoming QSL Bureau manager for British Columbia, Canada. With this change, the new address is the VE7-VA7 Incoming QSL Bureau, 12441 - 58A Avenue, Surrey B.C. V3X 1X6. Clarke replaces Dennis Livesey, VE7DK, who served in that post for the past 19 years. (RAC)

EMERGING TECHNOLOGY: THE POWER OF THE SHOE

Inventor Trevor Baylis hand-crank radio made him
the toast of Africa. Now he wants to unleash
pedestrian power world-wide. We have more in this report from the WIA News:

--

Its an electric shoe capable of charging batteries by pedestrian power
alone,
this for cell phones, two-way pagers, MP3 players, or just about any other
low-power portable gizmo.

Baylis's spiel: Put away those plugs, chuck those re-chargers and cords -
'cause juicing up will soon be as easy as a walk in the park.
This man is an avid inventor, from the non drip tea-pot to the talking
potty, a
children's toilet trainer that barks congratulations each time its occupant
performs to order. I dont think that one charges batteries though ....

So, back to his shoes, the heel insert is fashioned from piezoelectric
crystal,
and this when bent, squeezed, or struck, produces a high voltage at a very
low
current - rather like the static electricity created by rubbing fur on a
balloon.

Trevor went on to explain "We then put that charge back through a little
electronic circuit, which sorts it out before squirting it into the battery
of
the mobile phone - or "can't live without" electronic toy, held in a pouch
sewn
on the back of the boot."

--

It appears as if the man who gave us the crank-up
radio is inspired, once again. (WIA)

**

RADIO TRENDS: NEW GUIDELINES FOR AM BROADCASTING

The AM Broadcasting Subcommittee of the The
National Radio Systems Committee has adopted a
new guideline titled Bandwidth Options for Analog
AM Broadcasters. The document is a standard for
broadcasters who wish to operate their AM
facilities with audio bandwidths below 10

kHz. It also offers an explanation of why reduced AM bandwidth may be advantageous.

Additionally, the AMB Subcommittee adopted a guideline titled AM Pre-emphasis/de-emphasis and Broadcast Audio Transmission Bandwidth Specifications," and another to be known as "Emission Limitation for AM Broadcast Transmission." These are revisions to previously adopted standards, as a result of the group's periodic standards review process. (RW)

**

EMERGING TECHNOLOGY: IS THE PRICE REALLY RIGHT?

Here's something to think about the next time you go out to buy a new radio or station accessory. According to a new study, the amount of the discount may be less important than the numerical value of the farthest right digit.

This theory is explained in a new study from the Journal of Consumer Research. Keith S. Coulter of Clark University and Robin A. Coulter from the University of Connecticut are the first to identify a visual distortion effect that may influence how consumers look at sale prices.

The researchers show that "right-digit effect" influences consumer perception of sale prices. When the right digits are small, people perceive the discount to be larger than when the right digits are large. In other words, an item on sale for $211 from the original price of $222 is thought to be a better deal than an item on sale for $188 from an original price of $199, even though both discounts are $11. Got that so far? Well theres more.

The researchers also find that when consumers view regular and sale prices with identical left digits, they perceive larger price discounts when the right digits are "small" -- less than 5 -- than when they are "large," or, greater than 5.

The study's authors say that when consumers examine multi-digit regular and sale prices in an advertisement, they read those prices from left-to-right. If the left digits are identical, consumers will pay less attention to those digits, and instead will focus primarily upon the disparate right-most digits in the price comparison process.

The authors say that their findings indicate that comparative price advertising can distort consumers' perceptions in ways unintended by the seller. Then again, its doubtful either of these two gentlemen ever spent time at a hamfest to see what real bargaining is -- first hand. (Journal of Consumer Research)

**

HAM RADIO TECHNOLOGY: DFCWI BEACON ON THE AIR

A beacon using the newly created DFC Wi type modulation is on the air from the United Kingdom. On Wednesday September 19th, the 10 GHz GB3SCX beacon located in Dorset began operation using the new modulation technique to assist in evaluation of the mode.

The GB3SCX beacon modulation still carries a normal on/off CW identifier followed by 15 seconds of carrier on its G-P-S locked frequency of 10368.905 MHz. This is then followed by a DFC Wi transmission with tones 400 Hz higher for a Dot and 600 Hz higher for a Dash.

DFC Wi stands for Dual Frequency CW, with a third idle tone. It is described in more detail at www.scrbg.org/g4jnt/ (GB2RS, Southgate)

**

DX

In D-X, the 3B7C team on St. Drandons went QRT on September 25th around 03:31 UTC. The operation netted 135,500 QSOs. This total makes this expedition 3rd only to D68C and 3B9C. QSL information is on the 3B7C web page.

And word that Southgate Amateur Radio Club member, G3RWL will be active as 8P6DR from Barbados through October 14th. He plans to operate CW and digital modes on 80 through 10 meters. QSL via G3RWL, direct or bureau. E-mail requests for bureau cards can be sent to g3rwl at amsat.org.

Lastly, FO5RK, reports that his planned Dxpedition to Rotuma as 3D2AG/P is on schedule. His operation will take place between December 2007 and January 2008 with the actual dates will be announced later. FO5RK will be managing his own QSL requests upon his return home. Upon his return home, he will have his logs available on-line.

(From various DX sources)

**

THAT FINAL ITEM: T-HUNTING FOR THE BIRDS

Since 1998, hams and other VHF listeners have
been helping biologists by listening for pulsed
signals from radio collars and tags. This fall's
project involves another endangered
bird. Newsline's Joe Moell K0OV has the details.
--

Fall is here and North American birds are heading
south to find winter homes. Every year, Eastern
Loggerhead Shrikes leave nesting grounds in
Ontario, Canada, but fewer and fewer are
returning in the spring. Scientists want to know
what happens to these critically endangered
songbirds, and they're asking for our help.

Researchers at the University of Guelph in
Ontario have placed radio tags on 16 young
shrikes. They need assistance from hams and
monitoring enthusiasts in eastern states to find
out if the birds end up in Florida as expected, or
somewhere else. You can help from the comfort of
your hamshack by tuning in regularly to the tag
frequencies, which are between 172 and 173 MHz.

The complete frequency list is at my Web site,
along with articles to help you distinguish the
tags from other signals you may hear there. Get
started now, because these Loggerhead Shrike tags
will only be active into November. The
information is at _www.homingin.com_
(http://www.homingin.com) . That's homingin, as one word.

Thanks in advance for your help. From southern
California, this is Joe Moell, K0OV, for Amateur Radio Newsline.

--

Again that website is www dot homing in dot com. (K0OV, ARNewsline(tm))

>not subsidized, either have to pass their costs
>on to their subscribers, or they go out of business.

>I'm Fred Vobbe, W8HDU.
```

[...]

I don't know a lot of detail about the economics of this, particularly at the bulk/wholesale level, but I wonder if switching to CD-R's would be a reasonable alternative at this point. At retail at least, I observe that spindled CD-R's are about as cheap, if not slightly less so, than cassette tapes. CD players with headphones are approaching $10-$15 at box retailers, and CD-capable drives are ubiquitous in most households that have either PC's or DVD players, so this shouldn't be a hardship for the listeners, either. I recall a CBS "60 Minutes" piece about NetFlix, where they determined that a DVD could be mailed in a simple flat envelope inexpensively, and the odds of accidental breakage was low enough, that it was cheaper over large quantities to send it that way and just send a replacement for the occasional broken disc. CD-R's mailed that way would at least be under the 1/4" limit, and would save the extra postage.

There would be the need to set up CD burning equipment, but most standard PC's seem to already come with CD burners, and are not that expensive to buy separately. Whatever investment in new equipment by both sender and receiver would appear to be quickly offset by the saved postage multiplied over many bulk mailings.

Is one possible issue that the recipients like to reuse the cassettes? If so, then going to CD-RW's might be an option if they are not cost-prohibitive.

Silent Key EI9HY

We are sorry to have to tell you of the death of Brian Lynch EI9HY. Brian died three weeks ago after a short illness. To his wife Eileen and to his three daughters we extend our deepest sympathy. May he rest in peace.

Important Anniversary

Tuesday last marked the 60th Anniversary of the conclusion of the conference of the International Telecommunications Union held in Atlantic City in 1947. The outcome of this conference was very beneficial to the amateur community. A new HF band was obtained at 21 MHz and above 30 MHz the basic structure of the amateur bands up to 10 GHz was established. This included the VHF 2 metre band and the UHF 70 cm band together with the microwave bands at 13 cms (2.4 GHz), 6cms (5.7 GHz) and 3 cms (10 GHz).

Space Anniversary

Thursday last marked the 50th anniversary of the launch of the first artificial Earth satellite. Sputnik 1 was launched by the USSR on the 4th of October 1957. The 59-centimetre aluminium sphere weighed 84 kgs, had four aerials protruding from the back and took about 98 minutes to orbit the earth. The satellite carried batteries, which accounted for most of the weight and two radio transmitters. These transmitters sent pulsed signals on 20.005 MHz and 40.005 MHz and the length of these pulsed signals varied depending on the satellites temperature and internal pressure.

Radio amateurs throughout the world monitored the signals from Sputnik 1 and the signals heard on Radio Eireann here were recorded at an amateur station in Dublin. The batteries in the satellite ran out after

three weeks on the 26th of October. The satellite re-entered the Earth's atmosphere after three months and burned up on the 4th of January 1958 after about 1450 orbits of the Earth. It is interesting to note that just four years after the launch of Sputnik 1 the first amateur satellite Oscar 1 was put into orbit by the American Air Force on one of its rockets. This satellite orbited the earth for 22 days transmitting the familiar "HI"greeting in CW.

City of Belfast Radio Amateurs Society

COBRAS (GI2BX) are based in the Social Club of the famous Shorts aero-engineering firm in Belfast and GB2MGY are closely associated with the nearby SS Nomadic, the original tender ship of the Titanic.

COBRAS, the City Of Belfast Radio Amateurs Society look forward to welcoming Mike McGirr, K9AJ as Guest Speaker on Monday the 8th of October. Mike has become synonymous with many of the most memorable DXpeditions: Most recently, he was a CW operator and Team Physician of the BS7H activation of Scarborough Reef. The talk begins at eight o'clock in the COBRAS meeting room in the Shorts Social Club on Holywood Road, Belfast and all Visitors are very welcome to come along.

CQIR

As you no doubt heard, CQIR caused quite a stir on the bands last weekend. Despite poor propagation conditions on the Saturday, Irish stations on all continents were worked by the Society's headquarters station EI75IRTS from their location in the Phoenix Park. The team had erected a rhombic antenna with five wavelength legs at a height of 65 feet beamed on the states and this helped counter the poor propagation. The station made eleven hundred QSO's in the 24 hours of the Contest and to date over a hundred logs have been received for the event from around the world. Our thanks to all the EI and GI stations who participated and remember to get your logs in as soon as possible for inclusion in the draw. Details of how to submit your log are available on the IRTS website.

AREN supports Charity walk

AREN members Declan Horan, EI9FVB and Conor O Neill, EI4JN supported a walk in aid of the Irish Heart

Foundation on Saturday 29 September last. The walk in the McGillicudy Reeks was led by Conor who radioed regular reports to Declan through the Cork repeater. Declan operated from his home QTH in Ballicollig Co. Cork. The walkers encountered thick fog on the ascent, which later cleared, giving way to clear skies and spectacular views.

Marconi Clifden Celebrations

On the 17th of October 1907 Guglielmo Marconi sent his first commercial message from the then new station at Clifden, Ireland. This October in celebration of this historic event members of the Galway Radio Experimenters Club will be running a special event station from Saturday 13th to Wednesday 17th from Clifden. The club has been issued the call sign EI100MFT for the event, MFT been the last call sign used on the original station.

On the Wednesday they will be making a special linkup with the Marconi sister station in Glace Bay, Nova Scotia. Part of this linkup will be an exchange of greetings between President Mary McAleese and Lieutenant Governor of Nova Scotia the Honourable Mayann E. Francis. The group will also be honoured to have Princess Electra Marconi present as she is coming to Clifden for the festival along with an Exhibit from the Marconi Foundation in Bologna. The Galway Radio Experimenters Club will also be presenting a display of vintage equipment. More details on the festival can be found at www.clifden.ie. Visitors to the station are more than welcome and if you would like to participate this can also be arranged. For further information please contact Enda Broderick (II2II) on 086-8676410 or email: &#65533;enda dot Broderick at lightnet dot ie&#65533;.

Marconi Lectures

Marconi&#65533;s achievements will be celebrated with a series of Marconi Centenary commemorative events from October the 12th to the 17th in Clifden, coordinated by the Clifden Chamber of Commerce. The celebrations include a lecture by Paul Duffy, Chartered Engineer and historian, entitled &#65533;Marconi-The Engineering Marvel&#65533;. This lecture will take place at the Clifden Station House Theatre on Sunday the 14th of October at 1 p.m. Michael Sexton, Chartered Engineer and author of &#65533;Marconi: The Irish Connection&#65533;, will give a

lecture on the national aspect of Marconi's work at the Clifden Station House Theatre on Monday the 15th of October at 1 p.m.

Professor Peter Kennedy will chair a forum entitled "Whither Wireless Communications? Marconi's Legacy in the 21st Century" on Tuesday the 16th of October at Clifden Station House Theatre. This forum will reflect on Marconi's achievements and the future for wireless communications.

Waterford Rally

The Waterford Radio and Electronics Rally will take place on Sunday the 21st of October at the Woodlands Hotel on the Dunmore Road in Waterford. South East Communications and Long Communications will be at the rally. The IRTS, AREN and a bring-and-buy stand will also feature.

Doors open at 11 a.m. and admission is 5 Euro, accompanied children are admitted free of charge. For details including a directions map, visit the South Eastern Amateur Radio Group web site on www.searg.com.

Upcoming Rallies

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

Talk on TETRA Digital Radio

There will be a free talk on TETRA digital radio in Dublin on the Thursday the 11th of October at 6 p.m. TETRA radio is a new secure radio system currently being rolled out by the Gardai and is in use on the LUAS tram system in Dublin. This system which operates in the UHF band features mobile phone like dialling as well as group calling like most PMR analogue systems. It may be rolled out in the future for all emergency and public services. The talk will be held at Engineers Ireland, 22 Clyde Road, Ballsbridge, Dublin 4, which is beside the American Embassy.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to &#65533;news at irts dot ie&#65533; for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday&#65533;s bulletin.

One thought that occurs to me (because I have personal experience of it) is
that some disabled people may actually not be able to physically handle
CD's. I know this because my brother is one of them. He is severely
physically disabled, has cerebral palsy and simply cannot pick up a CD/DVD
from its case and put it into a player. He can just about, with a lot of
physical effort, put a cassette into a tape player and set it running, but
he has a lot of difficulty manipulating the controls and is always chewing
up tapes due to continually stopping/starting/winding them.

He is a big fan of classical organ music and we buy him CD's and copy them
onto cassettes for him, but as he is constantly (through no fault of his
own) destroying them, we have to re-record them every so often. The trouble
is, blank cassettes are becoming increasingly difficult to obtain. Those
stores that do still stock them say that when their stocks are exhausted

they won't be having any more.

What my brother and people like him (surely he can't be the only one..?)
will do then is anybody's guess.

Hi Ivor,

This might be a solution.

Radio stations now use "cart" software, instead of the cartridges of old.

I've seen some of this software, at least for the mac - I'm certain that PC has them too. The sound or music is selected and played after being digitized and placed on a hard drive. In this way, the CD's can be digitized into MP3's, and he can select by pushing a key or use a mouse if he is capable.

I don't know all the particulars of the situation, but maybe this could help?

!. there must be huge stockpiles of cassettes at institutions or private housholds who used them. They are not blank, but can be used. The only problem is to find them before they are thrown away.
In Holland you can find hundreds of them in recycling stores.

2. second solution is to find another way of packing the CD. No jewel box but paper or plastic sleaves or something else?

Ivor ,
Here is a possible solution.
I use a Sony DVD "Disk Explorer". My old model holds 200 disks. It will play audio CD's, MP3's, WMA, DVD, Video CD,s etc. They make/made a newer model that holds 300 disks. I know these units can be cascaded via jacks on the back of the units. I bet there are similar audio CD only units out there.
Once loaded with disks, the disks never need to be touched again.

If you are away from 60Hz lines or have few issues with strong AC
buzz, the whistling is very likely a natural phenomenon between 8 and
10 Khz. I believe it to be something related to the earth's magnetic
field and have read something about this in the past. In fact, it was
a selling point of one popular VLF receiver years ago. It was
described as almost ghostly. I bet it was a Palomar VLF receiver ad!
The device has a large loop antenna.

The whistling may be even more clear, the further you are from power
lines. I'm also curious to know if the whistling is louder and more
noticeable when the solar cycle gets cranked up again in a few years.

73's!

The OP finally discovered that the manufacturer had a
bad batch of tubes which intermittently broke into self-
oscillation in their circuit.

C5 - GAMBIA
After their successful DXpedition to Mauritius Island last year
Rich,OM2TW (team leader), Bob,OM1KW (CW/SSB OP), Joe,OM5AW (CW/SSB),
Roman,OM2RA (CW/SSB), Noro,OM6NM (CW/SSB), and Dano,OM1NW (digi/SSB)
of the "Mosquitos Contest Club" (OM0C) will show up from Gambia from
Oct 17-30 this year. Activities will take place as C52C with up to
four stations running simultaneously on 6-160m focussing on the
Top band 160m. Their plans include a participation in the upcoming
CQWW SSB Contest signing C50C and also a short trip to the island
Bijol (AF-060). The QSL manager is OM2FY, he confirms direct or via
the bureau. More information can be found online at:
http://www.om0c.com/gambia

CE - CHILE
Roberto,CE2/YV5IAL, will be QRV with from the Pacific coast using his
QRP equipment (5 watts) on 10/15/20/40m from Oct 15-21. He will try
to<work in PSK31 on 14070.15 kHz every day from 2200-0000 UTC.
QSLs via bureau to YV5IAL.

VK - AUSTRALIA
It is only little known that Australia issues also suffixes with four
letters. These are novice licenses and more of 1.000 of them have been
issued so far. The suffix always starts with a "F". Raj,VK4FRAJ, the
12 year old son of VK4AN is the only one known to work also in CW and
sometimes it is not very easy for him to explain that in CW. Raj works
with only 3 watts, a vertical and a logperiodic and is momentarily
working on his DXCC award. He is awaiting every QSL arriving via the
VK4 bureau or via the direct address of his father VK4AN:
Eddie, 17-19 Ross St, Maryborough, QLD 4650, Australia.

YK - SYRIA
Amateur radio is officially allowed in Syria for 60 years now. HAMs are

allowed to use the prefix 6C60 instead of YK between Oct 15 and Nov 11.

LU - ARGENTINA
The Grupo Argentino de CW (http://gacw.no-ip.org) celebrates its 30th anniversary this year and the festivities take place in "Morse" in the province Buenos Aires. LU1DZ/E, LU5FZ/D, LU6UO/D, LU7BTO/D, LW1EXU/D and LW2DX/D will be QRV from there with two stations on 160-10m from Oct 12-15.

T31 - CENTRAL KIRIBATI
Toshi,JA8BMK, destroyed his amplifier as T30XX on Tarawa and therefore cancelled his activity as T31XX. On his way back home to Japan he hit the airwaves as 3D2WW shortly.

YV - VENEZUELA
The Radio Club Venezolano organizes an activity from Portuguesa using the call YW3AJ in all modes on all bands.The operation takes place from Oct 11-14 and counts for the Venezuelan States Award. QSL via YV5AJ. Their website is: http://www.radioclubvenezolano.org/concurso.htm

4N - MONTENEGRO
Toby,DD5FZ, is going to hit the airwaves as 4N6FZ from Oct 15-27. He may be also a guest op at the station of YT6A and plans to take part in the CQWW SSB and the WAG Contest. QSL via DD5FZ, via bureau is ok.

5Z - KENYA, AF-067
5Z4/YT1CS showed up from AF-067 on Oct 6 and will stay there until the end of the month. OM Miki is using a TS-450S, a vertical for 40-10m and a dipole for 80m, works mostly in SSB and plans to take part in the CQWW SSB Contest. QSLs direct via his homecall.

6Y - JAMAICA, NA-097
Rick and JoAnne Donaldson are celebrating their 30th wedding anniversary and 18th year on air from Oct 12-14. Listen for N0NJY/6Y5 (Rick) and KB0IRW/6Y5 around 14190 kHz. QSLs via homecalls.

SOUTH PACIFIC
Larry,N0UU, and his XYL Jo Ann are travelling through the South Pacific and Larry plans to activate following DXCC entities and IOTA Islands:
Oct 15: FO/N0UU Makatea
Oct 16: FO/N0UU Fakarava
Oct 17: FO/N0UU Raroia
Oct 19: FO/N0UU Pukara
Oct 23: VP6UU Henderson Island (OC-056)
Oct 24: VP6UU Ducie Island (OC-182)
Oct 27: CE0/N0UU SA-001
Larry's preferred frequencies are 21.290 and 14.215 MHz but he has been spotted also in SSB on 17m. He confirms all QSOs also via bureau and invites everybody to visit his homepage at: http://www.tri.net/n0uu

4TH STRANGE RADIO EVENT
Once again the Italian "Strange Radio Team" (SRT) organizes an event which lasts from Oct 19, 0600 UTC, until Oct 21, 2200 UTC. Following

stations from all over the world will activate a special event call:
call QSL route
AO8SRT IZ8EDJ
CQ7SRT CT1BWW
DZ1SRT DU1IVT
HP1SRT HP1WW
L30BST IZ8EDJ
V55SRT IZ8EDJ
W1SRT W3IZ
YT07SRT YT3W
II0SRT IZ0BTV
IS0SRT IS0LFZ
IR2SRT I2JJR
II5SRT IZ5BTC
II6SRT IZ6FZS
IR7SRT IZ7CRW
All stations are working in SSB, more information about an award or
a plaque can be found at: http://www.strangeradioteam.com

IRELAND, SPECIAL EVENT STATION
Guglielmo Marconi sent the first commercial radio message from an
Irish place called Clifden on Oct 17, 1907. Members of the Galway Radio
Experimenters Club will activate the callsign EI100MFT from Oct 13-17.

KAZAKHSTAN, SPECIAL EVENT STATION
Sputnik 1 started the era of modern spaceflight 50 years ago. The OPs
UN7SW, UA9LAK/UN, UN7FW, EU1FC, RV3AR, RN3ADS and RU3AWD are activating
the special event station UP50SAT from the spaceport Baikonur during
the month of October. QSL via bureau to RV3AR.

THE NETHERLANDS, SPECIAL EVENT STATION
PA50JOTA from Nieuweroord is celebrating the golden jubilee of the
"Jamboree On The Air" from Oct 17-31 (http//www.scoutnet.nl/~jota).
QSL via PA3EFR.

SILENT KEYS
Dimitar,LZ5AZ, one of the founding members of the World Wide Young
Contesters, passed away at the age of 23 on Oct 2. The DX community
bemoans also the loss of the wellknown Ukrainian DXer Alexsandr
Kuznetsov,UY5EG, and the Spanish EME enthusiast Jose Maria Prat,EA3DXU.

LINKS: Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php
---
http://www.strangeradioteam.com/wwdxt is the link to the survey of the
Strange Radio Team (SRT) who should be voted DXpedition of the Year.
The World Wide DXpedition Trophy is won by N8S from Swains Island.
Pictures of the Clipperton DX Convention (Sep 22) were published at:
http://lesnouvellesdx.free.fr/photos/photo.php?page=cdxc2007

UPCOMING CONTESTS

Oct 13: The Makrothen Contest, RTTY
Oct 13: European Sprint Contest, CW
Oct 13/14: Oceania DX Contest, CW
Oct 14: ON Contest 80m, SSB
Oct 14: Komi-Ruhrgebiet QSO Party
Oct 14: The Makrothen Contest, RTTY

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AF-024, S7, Seychelles-Inner Islands: IZ5FSA, Stefano,IW5DPF, and Luca,I5IHE
will sign S79LL, S79SO and S79LC from Praslin Island from Oct 14-19.
QSL via homecalls (d).

EU-001, SV5, Dodekanes: Ermanno,SV0XAN/5, plans to become QRV from the
islands Lipsi, Agathonisi and Arkoi from Oct 2-20.QSL via IK2WZD (B/d).

EU-031, I, Ischia: Helmut,IC8/OE1MHL, is on the air until Oct 11 and can be
found on the bands mostly from 0500-0900 UTC and from 1700-2000 UTC.
The operation counts for the IIA NA-001, MIA MI-042 and WLOTA LH-0689.

EU-067, SV8, Kyklades: OM Rene,SV8/HB9AAI, is activating Antiparos Island
until Oct 16. QSL via homecall.

OC-013, E5, Rarotonga: Bill,N7OU, is QRV as E51NOU from Oct 8 until Nov 3.
QSL via homecall.

OC-038, ZL7, Chatham Islands: Ulli,ZL7/DL2AH, will hit the airwaves from
Chatham Island from Oct 17-30. QSL via homecall.

Lighthouse activities (WLOTA/ARLHS)

5R8RJ LH 3042 until Oct 26

As I understand it -- at least here in the USA -- the Radio Reading Services (RRS) are locked into cassette tapes for the foreseeable future. This is because the players (and player recorders) are specifically designed to be "blind friendly" as defined by the Americans in Disability Act.

While many sightless people can manipulate CD players, there is no established "standard" as there are for cassettes and no real impetus to create one. Don't hold your breath waiting.

B-T-W: Most RRS tapes run at 15/16 IPS -- half the speed of the normal 1 7/8 IPS of cassette machines -- tho some like those my friend Hap Holly KC9RP (Of RAIN fame) are dual speed.

At low speed a C-120 (2 hr) cassette will store 4 hours of voice quality sound. Another reason that the cassette is so popular with the RSS.

But this capacity pales in comparison to digital devices. I was amazed
to discover that some of those little hand-held digital recorders store
144 hours of "extra high-quality" sound. That technology sure has
changed since I last looked at it.

"Like all Morse experts, Mr. Adams rarely breaks signals down into
letters, instead hearing complete words much as readers recognize words
on a page. When he transcribes a message at high speeds, his fingers are
five or 10 words behind his ears."

I've been licensed since 1961, and I've heard and read things like this
ever since.

I operated strictly CW for most of that time and I've never come close
to being able to copy like that.

I can copy by ear at 30-35WPM, but can only transcribe at about 20WPM
because I write down each letter as I hear it; copying behind is an
absolute mystery to me, as is the idea of hearing words instead of
individual letters.

It's probably way too late for me to get over 45 years of bad habits,
but how do people achive this state?

I don't think it's too late for you at all. You simply need to make some adjustments to your method. I run mobile CW and the thing which makes that possible while in motion is that one never writes anything down. The pen or pencil is what's getting in your way.

If you don't write it down, you're forced to remember the fellow's call, name, QTH and the like. When I operate from home, I type a callsign into my log. I might write down his weather or the type antenna he's running, if I plan to ask more about one of those items.

Try finding a couple of speed merchants on 80 or 40m some evening and don't even pick up your pen. Sure, you're likely to miss a few things. Go ahead and miss them. You'll get better at it in a short time.

Just force yourself into the habit of waiting for each word to complete before scribbling it down. Your brain will still be listening for the stuff which arrives while you write. You will miss things at first but persistence will pay off.

It helps to be able to write without looking at the paper, this is just a coordination and neatness exercise which you can develop off air by copying from a book or newspaper to a scratchpad keeping your eye on the book.

Like you, I have heard and read about this often (copying whole words rather than single letters), and I think it is a little bit misleading. I can easily copy plain text CW in German or English at around 60 WpM, but still, if I actively, consciously listen, I *do* hear every single letter.

But that does not mean that I have to concatenate those letters to form a word, like a first grade pupil does, when he reads an unknown word (I also recently encountered this problem again while learning Macedonian, written in cyrillic letters!). I rather make an assumption on what the word could be, often even before the word is transmitted. By making such predictions (and in most sentences you can easily predict the following word; or if not, you can predict the word based on the first letter, or make some rough assumptions of what might come next), you can stop to worry about the word after you have recognized the start.

If, however, an unexpected word appears, you have to change the plan in your mind, and decode it consciously. In most cases again, the first two or three letters will be sufficient to make a safe assumption on what the word will be. In cases of unknown names (operator, QTH, ...) you might have to go back to putting it together letter by letter.

I think everyone copies plain text CW similar to this, to a certain degree. It starts with your first standard QSOs: Those ever repeating phrases ('tnx fr rprt = ur rst 599 ='...) are soon 'hard coded' into your brain. They are so easy to copy because it's what you *expect* to hear. If the other station suddenly starts sending something _unexpected_, you're getting into trouble or at least you'll suddenly have to pay close attention. The reception is moving somewhere from your subconsciousness to a higher level of consciousness.

After my first 50 CW QSOs, I stopped to write down every single letter, and only had to write everything that was not the expected stuff like "my name is", but the names/QTHs itself.

So, hearing a whole word as one 'sound' does - in my personal experience - not work, you still hear it letter by letter. But the more routined you are, the deeper the process of perception slides into your subconsciousness.

73,

Amateur Radio Newsline(tm) Report 1574 - October 12, 2007

The following is a special announcement. Last
weeks report on the decision to disqualify a
candidate for the ARRL Directors position in the
Southwestern Division brought some very mixed
reaction. While most hams in the division and a
few activists elsewhere were interested, the
majority outside the Southwestern Division were
not. As there is more information on this
situation this week, we are presenting it in a
separate program that follows the regular
newscast. Those interested can stay on-line to
hear it. Others can pull away at the end of the
normal newscast. We hope this satisfies most of
you. Now to this weeks news anchor, Jim Meachen, ZL2BHF..

Amateur Radio Newsline report number 1574 with a
release date of Friday, October 12, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two new low noise
digital modes are unveiled for ham radio and
cross border interference to a repeater brings a
Washington state ham a proposed $7000
fine. Find out the details on Amateur Radio
Newsline(tm) report number 1574 coming your way right now.

(Billboard Cart Here)

**

EMERGING HAM RADIO TECHNOLOGY: NEW JT2 & JT4 DIGITAL MODES ANNOUNCED

Two new digital modes JT2 and JT4 are being
supported by an experimental version of the
popular WSJT weak signal software. Both are both
designed for making QSOs under extremely
weak-signal conditions while using the same
message structure and source encoding as that
used in J T 65. Bill Pasternak, WA6ITF, has more:

--

The new mode called JT2 has a bandwidth of just
8.75 Hz enabling dozens of contacts to take place
in the 2.4 kHz SSB stock filter bandwidth found

in most of today's transceivers. The system uses
2-tone Frequency Shift Keying modulation for
synchronization and differential BPSK for the
encoded user information. In this way both a
sync bit and a data bit can be transmitted with
each channel symbol. Symbols are sent at a rate
of 4.375 baud, and tone separation for the 2 tone FSK modulation is 4.375
Hz.

The performance of JT2 may eventually be as good
as JT65, or slightly better at 144 MHz and
below. If it can be made to work up to its
potential, JT2 could be a great boon to random
digital E-M-E operation on 2 meters, especially
for those without panoramic wideband receivers
and software like MAP 65. JT2 may also be
attractive for use on the Very Low Frequency,
Medium Frequency and High Frequency bands under weak-signal conditions.

JT4 is similar to JT2 except that it uses 4-tone
Frequency Shift Keying . This, so it can also
include both a sync bit and a data bit in each
symbol. Again the keying rate is 4.375 baud, and
a number of different tone spacings are offered

For the Amateur Radio Newsline, I'm Bill
Pasternak, WA6ITF, at the studio in Los Angeles. Jim.

--

WSJT version 5.9.8, r558 is the experimental
release that contains both of the new operating
modes. Further information on JT2 and JT4 is on
line
at
http://physics.princeton.edu/pulsar/K1JT/JT2_JT4.TXT.
More about WSJT is at http://physics.princeton.edu/pulsar/K1JT (Southgate)

RADIO HAPPENINGS: THE ITU AT 60

Tuesday September 25th marked the 60th
Anniversary of the conclusion of a conference of
the International Telecommunications Union held
in Atlantic City, New Jersey. A conference that
was very beneficial to the Amateur Radio community worldwide.

At that gathering a new High Frequency band was
obtained at 21MHz. The 15 meter band as it became known.

Also, above 30 MHz the basic structure of the
amateur bands up to 10 GHz was established. This

included the VHF 2 meter band and the UHF 70 cm band along with microwave bands at 2.4 GHz. Much of this original infrastructure still remains in place today. (WIA News)

RESCUE RADIO: THIRD EMCOM PARTY ON THE AIR

If you are into public service work, mark Sunday, November 11th, from 11.00 to 15.00 UTC on your contest calendar. This, as International Amateur Radio Union Region 1 invites the headquarters stations of IARU member societies and stations of emergency communications groups to participate in the Third EmCom party on the Air.

Operations take place on and near the emergency Center-of-Activity frequencies on 80, 40, 20, 17 and 15 meters. The objective of the party is to increase the common interest among member societies in emergency communications while testing the usability of these Center of Activity frequencies perform across the various International Telecommunications Union regions.

This is the first time that all IARU regions are invited to participate the EmCom Party. This years exercise will be limited to SSB operation only, but plans do call for the introduction of digital modes in 2008. (Via E-Mail)

ENFORCEMENT: CROSS BORDER INTERFERENCE TO REPEATER BRINGS A $7000 FINE

In the first case of its kind that we know of, the FCC has issued a $7000 Notice of Apparent Liability for Forfeiture to a United States ham for interfering with a Canadian repeater.

--

That's right Jim.

The FCC says that James J. Grinton, K7VNI, of Bellingham, Washington apparently, willfully and repeatedly violated Section 97.113(b) and Section 97.119(a) of the Commission's Rules. This, by transmitting one-way communications and by failing to transmit his assigned call sign in the Amateur Radio Service. The one way transmissions interfered with the VE7RPT repeater in British Columbia, Canada. That system sits atop Mt. Seymour and operates on the popular 146.34 in and 146.94 MHz out channel

pair.

Back on December 7, 2006, in response to a complaint alleging intentional interference to communications on the VE7RPT repeater, an agent from the FCC's Seattle Enforcement Bureau used mobile direction finding to locate the source of the signal. His efforts lead him to the residence of amateur radio operator James Grinton, K7VNI, in Bellingham. As a follow-up, during the period of December 9, 2006 to January 1, 2007, the Seattle agent monitored the repeater input frequency of 146.340 MHz. He observed 59 transmissions of varying lengths from Grinton's residence.

On January 19, 2007, the Seattle Field Office issued a Warning of Interference to Communications Letter to K7VNI. It informed Grinton that his station may be the source of willful or malicious interference to Amateur communications. Also, that if the transmissions continue, he would be investigated during ongoing FCC enforcement efforts. And if such an investigation indicated that he has violated the Communications Act or any FCC Rules, that he could be subject to severe penalties.

On February 27, 2007, in response to continued complaints, a Seattle agent again located the source of a signal on 146.340 MHz to coming from Grinton's residence. This time the agent recorded 17 minutes of a continuous transmission of one-way communications of music alleged to be transmitted by Grinton on 146.340 MHz. And during the period of January 19th to June 23rd the agent monitored 146.340 MHz and observed 163 transmissions by Grinton in which he failed to transmit his assigned call.

Now, based on the Commission's Forfeiture Policy Statement the FCC has fined Grinton $4000 for unauthorized emissions. It also tacked on another $3000 for Grinton's alleged multiple failures to properly I-D.

Jim-

--

The Notice of Apparent Liability for Forfeiture to Grinton was issued on September 25th. He was given the usual 30 days to pay the $7000 fine or to file an appeal. (FCC)

**

HAM RADIO AND SCOUTING: JOTA 2007 OCT 20 - 21

The 50th anniversary of Scouting's Jamboree on
the Air is scheduled for October 20th and 21st
. JOTA at it is known is the largest official
scouting event in the world, with an expected
500,000 participants this year. Amateur Radio
Newsline's Mark Abramowicz, NT3V, is himself a
big supporter of the scouting movement and has this preview of JOTA 2007;

--

The event is sponsored by the World Scout Bureau
of the World Organization of the Scout Movement.

Radio amateurs bridge the continents and the
miles using their radios to help young people
gathered at their QTH connect with young people
in another community, another state or another country.

Typically, in the United States, ham operators
hook up with their local Boy and Girl Scout
councils to set up stations at camping events, camporees, or Scout camps.

In other cases, hams open their shacks to groups to come in to take part.

That's right, this is an event open to boys and
girls in the Scouting movement and Girl Guides, too.

Here in the United States, the K2BSA call sign of
the national Boy Scouts of America will be heard in a number of call areas.

You'll also hear other variations of the BSA call
held by Scout groups as you tune up and down the band.

There are also activities at the HB9S, the
headquarters of the World Scout Bureau in Geneva,
and GB2GP, from Gilwell Park in the United Kingdom.

It's a special year for the Boy Scouts of the
world as well as this is the 100th anniversary of
the founding of the movement by Lord Robert Baden Powell.

The thing to remember is this isn't a contest;
it's not designed to work as many stations as

possible. It's really aimed at introducing young
people to the capabilities of amateur radio
whether it be SSB or even the digital modes such as PSK-31.

The bottom line: We as amateurs need to make it a fun experience.

You'd be amazed at how many youngsters are "mike
shy" and need some prompting when they're offered a chance to get on the
air.

Have a sheet of paper prepared at the camporee or
in the shack which asks the guest operator to
write their first name, their rank in Scouting,
their home town, and their hobbies, maybe their pets.

You'll need to act as control operator to make sure the QSO goes smoothly.

Also, it's important for U.S. operators to brush
on third-party agreements among the countries.
You'll find more about them in the JOTA section
of the American Radio Relay League website.

http://www.arrl.org/FandES/field/regulations/io/3rdparty.html

JOTA can be a rewarding experience for the operator, too.

And, it can spark interest in the next generation of amateur radio
operators.

From eastern Pennsylvania, listen for KC3BSA -
the call sign of Venture Crew 59 from the Hawk
Mountain Council at the Hawk Mountain Scout Reservation.

We'll be operating from the Cub Scout Tiger Day event.

Hope to hear you and your Scouts on the air!

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

RESCUE RADIO: W4WYT INJURED IN GYROCOPTER CRASH

A Blacksburg, Virginia, ham is in critical
condition after the gyroplane ne was piloting
crashed, killing his passenger. On Saturday,
October 6th, Ranson Pelt Jr, W4WYT, was flying
the ultra-light aircraft on what witnesses say
was a sightseeing trip when it fell to the ground
and caught fire in a residential neighborhood.

According to the Roanoke Times on-line, neighbors described seeing the gyroplane or gyrocopter -- a two-seat aircraft similar to a helicopter -- circle above the neighborhood about 1 p.m. before dropping to the ground behind a house and bursting into flames. Some who rushed to the scene found the Pelt reaching into the flames to free the passenger from the wreckage. According to a witness identified as Kirk Cowser, helpers had to restrain Pelt as he begged the them to get the woman out of the wreck. The unidentified passenger died in the blaze.

Pelt was eventually airlifted first to Carilion Roanoke Memorial Hospital and then transferred to the University of Virginia Medical Center. He was last reported in critical but stable condition.

Pelt's crash was the 14th aircraft accident in Blacksburg since 1962, but the first fatal one. The Federal Aviation Administration has been called in to investigate. (Roanoke Times On-Line, eHam.net)

ENFORCEMENT: APPLE I PHONE UPDATE THWARTS CELL CARRIER HACKS

If you own an Apple I Phone that's been hacked to operate on any cell carrier than ATT, you likely now own a very expensive door stop. One that will no longer let you make phone calls.

PC on-line says that the I Phone 1.1.1 update, released on Thursday, September 27th, disabled phones that had been hacked so to work with providers other than AT&T. AT&T is the only U.S. cellular provider Apple has allowed to carry its mobile phones and users of hacked units are reporting that the new update is making previously unlocked I Phones unusable. .

In recent weeks, a number of software tools have been developed to allow I Phone users to break away from Apple's AT&T-only restriction, but Apple has said that it would fight any attempts to unlock the iPhone. Several weeks ago the company released a warning that unlocking the unit would likely result in the modified I Phone becoming permanently inoperable when a future Apple-supplied automatic software updates are installed. This has now happened and modified phone will not operate even if a legitimate AT&T SIM card is re-installed.

SIM is an acronym for Subscriber Identity Module. That's the memory chip that contains account information and are used to authenticate devices on certain types of mobile networks. Unlocked I Phones had been able to use SIM cards from non-AT&T networks. (Science OnLine)

RADIO LAW: SOME IN CONGRESS FEAR DISASTROUS OUTCOME OF DTV CUTOVER

Some United States lawmakers are worried that too few Americans know that the analog television sets they have been using for years could become big cathode-ray paperweights after February 18, 2009. That's when broadcasters are mandated to shut off their analog signals and transmit only digital.

During a recent Senate Commerce Committee hearing examining the government-mandated transition to digital TV, lawmakers aired their views that too little was being done to get the message to Americans. They cite a poll released in January by the Association for Public Television Stations that indicates 61% of respondents had no idea the digital transition was going to take place. Of those that did know, most were not aware of a $40 per unit government subsidy that will be offered on the purchase of converter boxes that will permit current analog sets to display digitally transmitted pictures.

An even bigger problem is where to buy a set top digital converter box. While there are several companies including Philips and Motorola making them, they seem to be scarcer than hens teeth in the current consumer electronics marketplace. Few of the on-line sellers have them and we have yet to have a reporter walk into a brick and mortar establishment and find one on the shelf. And if you ask a salesman for help, he will likely try to sell you a new T-V rather than finding you the converter box you want.

Good luck on February 18, 2009 if you receive your television for free over the air.

**

CHANGING TECHNOLOGY: THE END OF TIME IN SOCAL

It's the end of time in southern California. At least as far as AT&T is concerned.

A brief note in customers' bills declared that
"Effective September 2007, Time of Day
information service will be discontinued."

What this means is that people throughout
southern California will no longer be able to
call 853-1212 to hear a woman's recorded voice
stating that, "At the tone, Pacific Daylight Time
will be...." Check for details http://tinyurl.com/ytsjkd (CGC)

NAMES IN THE NEWS: VE7DXD ELECTED NEW BC SECTION MANAGER

Mike Hale, VE7DXD, has been elected British
Columbia Section Manager for a two-year term of
office that begins November 1st. Hale was
elected through mail-in ballot by a two-vote
margin. He replaces out-going Section Manager
Drew Watson, VA7DR. A spokesman for Radio
Amateurs of Canada says that the very close
election results indicate that both men enjoy
wide recognition and support in British Columbia Section. (RAC)

THE SOCIAL SCENE: AMSAT NA SPACE SYMPOSIUM - OCT 26 - 28 IN PA

The 2007 AMSAT Space Symposium will be held at
the Pittsburgh Airport Marriott Hotel on Friday,
October 26th through Sunday, October 28th. Among
the events planned will be technical forums
focusing on the latest planning and technology of
Amateur Radio in space along with technical
demonstrations of prototype flight hardware and
software for the upcoming AMSAT Eagle ham
satellite. Also planned are discussions and
demonstrations of SuitSat-2, ARISS and AO-51.

This year AMSAT is also focusing efforts to
attract local middle and high school students to
the Saturday sessions. To accomplish this some
special programs were put on the agenda and
invitations were made to local Pittsburgh area science teachers.

Also taking place will be the annual AMSAT-North
America Annual General Meeting and the
AMSAT-North America Board of Directors
Meeting. This means that AMSAT Directors and
Officers will be available to answer attendee questions

More information on this years AMSAT North
America Space Symposium is in cyberspace at www.amsat.org (ANS)

RADIO IN SPACE: CELEBRATING THE 50th ANNIVERSARY OF SPUTNIK 1

Its been a half century since the race to the
final frontier began. That was in October of
1957 with the launch of Sputnik 1. Jim Linton, VK3PC, takes us back in
time:

--

Confirmation that the Soviet Union had launched
the first man-made earth orbiting satellite came
with a radio signal that was heard half a century
ago last Thursday, October the 4th. Around the
world amateur radio enthusiasts picked up the
satellite's beacon signal on a frequency of 20.007MHz.

Now let's listen to how Sputnik 1's weak signal
was heard in October 1957 as it orbited once every 96 minutes.

--

Actual Sputnik 1 Audio

--

Its history making orbit of earth had a permanent
impact on many of today's baby-boomers, whose
interest in space and technology was awakened by
Sputnik 1, the true beginning of man's space exploration.

For the Amateur Radio Newsline' I'm Jim Linton, VK3PC

--

A number of radio amateurs had their five minutes
of fame through media reports of their claims of
hearing the satellite. Others had a house full
of friends and neighbors drop by at the oddest
hours to hear the radio signal from the first man made object in space.

But it does not end there. One day shy of a month
after Sputnik 1 made history as the world's first
man-made satellite, the Soviet Union launched

Sputnik 2. This time, in addition to radio transmitters like that of its predecessor, the satellite carried the first animal into orbit. A dog named Laika (WIA News)

HAM RADIO IN SPACE: A NEW SCHOOL CONTACT RECORD

At 1832 UTC, on Wednesday October 10th students at the Isummasaqvik School in Quaqtag, Canada successfully contacted Clay Anderson on the International Space Station. Anderson answered all 20 questions prepared plus 2 more before the ISS went out of range of the ARISS volunteer ground station ON4ISS in Belgium.

This marked the 39th school contact for a member of the Expedition 15 crew and surpasses the previous record of 38 set by Expedition 12. Contributors to the Exp. 15 record include Astronauts and Cosmonauts Sunita Williams, Fyodor Yurchikhin and Clay Anderson. (ANS)

**

RADIO IN SPACE: AEGIS - MAPPING THE SKY

Radio is part of a massive project to map a distant region of the Universe in multiple wavelengths. AEGIS, an acronym for the All-wavelength Extended Groth Strip International Survey combines the efforts of nearly 100 researchers from around the world observing the same small region of sky in all available wavelengths of the electromagnetic spectrum.

The target area, called the Extended Groth Strip, covers an area the width of four full moons just past the end of the Big Dipper's handle. The AEGIS region has now been surveyed more intensively from visible light through x-rays and the radio spectrum using more telescopes and radio telescopes than any other region of the sky.

The first information derived from this experiment is now bring released to the public using the capabilities of Google Sky. This is a new feature of Google Earth. (Science Daily)

**

WORLDBEAT - SOUTH AFRICA: SARL PRESIDENT ADDRESSES COLLEGE TEACHERS

In news from around the world, the president of the South Africa Radio League has told his nations educators that ham radio can be an important teaching tool. Addressing a group of teachers who attended a training course for Further Education and Training arranged by the Department of Communications, Graham Hartlett, ZS6GJH, cited amateur radio not just as a fun pastime, but as an activity that has a positive outcome on the further training of young people in the disciplines of science, engineering and technology.

Hartlett said that Amateur Radio can make a valuable contribution in a students career choice. It also has the ability to teach basic technical and communication skills that will equip young people to render services to their community such as disaster communication and communication during large sporting events.

The objective of the course where Hartlett spoke is to train teachers to take amateur radio into their colleges and universities. (SARL)

**

WORLDBEAT - UK: A COLOSSUS CODE BREAKING EVENT

To celebrate the completion of the British-built World War 2 decrypting machine called the Colossus Mark 2, there will be an on the air ham radio operating event on November 15th and 16th. And in this one the challenge is truly complex. Here's how it goes.

A series of messages will be enciphered on a World War 2 Lorenz cipher machine. They will then be transmitted using six tone RTTY from the Heinz Nixdorf Computer Museum in Paderborn, Germany. The challenge is for anyone to break the cipher settings and decipher these messages before the rebuilt Colossus Mark 2 at Bletchley Park in the United Kingdom does it.

The Milton Keynes Amateur Radio Society which is based at Bletchley Park has already been involved in making test transmissions with the Heinz Nixdorf Computer Museum. The actual frequencies, tones for Mark are 900, 1620 and 2340 hertz. For Space they are 540, 1260 and 1980 hertz. At airtime the operating frequencies for the event have not been announced.

Bletchley Park is the historic site of secret British code breaking activities during World War

Two and the birthplace of the modern computer. More is on-line at http://www.codesandciphers.org.uk/cevent.ht (Southgate, GB2RS)

**

DX

In D-X, DL2AH, will be on the air from the Juan Fernandez Islands from March 18th to April 7th, 2008 operating portable C-E-Zero-Z. Activity will be holiday style on 40 through 10 meters mainly on SSB and RTTY using a FT-897. QSL via DL2AH, direct or by the Bureau.

Also, listen out for hams in Syria to use the special prefix 6C60 during the period from October 15th to November 15th. This, to celebrate the 60th anniversary of Amateur Radio in Syria. Operations will be on all of the High Frequency bands. QSL as directed on the air.

And W2GB, will be active from Jamaica as 6Y0B from October 23rd to the 30th. He states that he will be active before and after the CQ World Wide DX SSB Contest not jut during it. QSL direct to W2GB.

Lastly, G0UIH, will be active as VK2IAY/4 from Great Keppel Island from December 16th to the 2nd. As with his previous DXpeditions the main operation will be centered around 14 point 260 MHz, but with some possibility of time spent on 17 and 15 meters as well. QSL either direct or via the bureau.

(Above from various DX Newsletters and other sources)

**

THAT FINAL ITEMS: SHOES THAT SIGN APRS IN THE NIGHT

And finally this week the story of some shoes. Not your ordinary footwear. These are women's platform shoes that are equipped with A-P-R-S technology. But even the developer of says that these shoes are not for everybody. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports on the latest electronic footwear walking the streets:

--

The Aphrodite Project bills itself as a series of new media artworks inspired by the cult of Aphrodite. Its website notes that the Aphrodite

Project consists of three multi-media artworks called Sanctuary, Platforms, and Kestos Imas. And it's the Platforms or platform shoes that have hit home at ham radio.

Website advertising for the shoes says that safety is one of the main concerns of contemporary urban sex workers. To help protect those wearing them, each sandal will have an audible alarm system, which emits a piercing noise to scare off attackers. The shoes are also outfitted with a built in GPS receiver and an emergency button that relays both location and a silent alarm signal to public emergency services using the Automatic Position Reporting System.

The Aphrodite Project website says that use of position awareness and transmission systems to aid communities was inspired by the Automatic Position Reporting System. It says that APRS uses Amateur Radio to transmit position reports, weather reports, and messages between users. It also claims that APRS is free and open to the public.

To be clear, the website does not say where in the RF spectrum these shoes will operate. At the same time it does not say that they will not appears on bands like 2 meters, 220 or 70 cm where hams have established APRS networks. It just says that the technology is borrowed from ham radio.

So will these shoes with their APRS transponders soon start showing up on ham radio frequencies? We have tried to compact the Aphrodite Project to find out. As of airtime there has been no response from the group.

For the Amateur radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

More about these APRS equipped shoes and whom they were designed for is on-line at http://theaphroditeproject.tv/ (CGC, Science OnLine, The Aphrodite Project)

SPECIAL REPORT ON THE DISPUTED ARRL SOUTHWESTERN DIVISION ELECTION

This is a special report on the disputed ARRL Southwestern Division Election. Hers Jim Meachen, ZL2BHF:

--

The American Radio Relay League's Executive Committee has issued an in-depth explanation as to why it decided to uphold the Ethics and Election Committee's decision to disqualify Carl Gardenias, WU6D, as a candidate for Director of the organization's Southwestern Division. Amateur Radio Newsline's Don Carlson, KQ6FM, has seen it and has the key points:

--

As previously reported, in late September the League's Ethics and Elections Committee declared Carl Gardenias, WU6D, disqualified to stand for election in the Southwestern Division race. Over the weekend of October 6th and 7th, the ARRL Executive Committee met in Little Rock, Arkansas. One item on their agenda was the appeal filed by Gardenias concerning his disqualification. What follows are the key points the ARRL's Executive Committee's summary of the decision affirming the decision of the Ethics and Elections Committee.

The Executive Committee release states that a series of subsequent actions and inactions, by and on behalf of Carl Gardenias, WU6D, is what led the Ethics and Elections Committee to disqualify him as a candidate and to declare the

one remaining eligible candidate, Dick Norton, N6AA, re-elected.

WU6D subsequently appealed this decision to the ARRL Executive Committee. After conducting its own rather in-depth investigation the Executive Committee found that the series of events began on August 30th. That's when Carl Gardenias' wife Cathy, K6VC, identifying herself as Assistant Section Manager responsible for the Orange Section newsletter, asked ARRL Secretary Dave Sumner, K1ZZ to review an article about the division election for the section newsletter. Sumner responded, pointing out several changes that should be made.

On September 3rd, Dave Sumner received an inquiry from Dick Norton forwarding a copy of an e-mail signed by Cathy Gardenias that had been sent on September 1st using an an e-mail address that is used by both Carl and Cathy Gardenias. That e-mail had gone to 22 addressees in the Orange as well as other Southwestern Division Sections. The e-mail contained the article with the requested changes made. But says the Executive Committee, material not reviewed by Dave Sumner had been added along with the unauthorized and inaccurate statement, quote: "Approved by the ARRL k1ZZ." The Executive Committee says that this additional material, having to do with candidates' Web sites, was incomplete and in any case was not appropriate for inclusion in an official ARRL communication. This, because of restrictions on the distribution of campaign material via official channels.

Early on September 4th, Director Norton filed a complaint with the Ethics and Elections Committee on the basis of the September 1st message and sent copies to both Carl and Cathy Gardenias. Norton proposed several remedies, none of which included disqualification.

Later that day, Cathy Gardenias purportedly sent e-mails to a number of addressees with -- quote -- "Corrections to information sent out on August 28, 2007 regarding up coming elections." The ARRL says that the reference to August 28th was erroneous and caused some confusion. The Executive Committee says that WU6D later confirmed that the message had been sent to some other addressees on August 30th and 31st, it had

not been sent as early as August 28th. Neither did the September 4th message correct everything that was wrong with the original message.

The Ethics and Elections Committee met by teleconference on Tuesday evening, September 4th, to discuss several matters including Dick Norton's complaint. Under ARRL election rules, a standard of truth applies to all mailings by candidates. The committee concluded that the appropriate remedy in this case was to require Carl Gardenias to distribute specific text of a correction and apology to everyone who had received the original message, including addressees who were not known to the committee.

On September 5th Dave Sumner communicated specific instructions to Carl Gardenias. WU6D acknowledged. He also said -- and we quote: "Thank you. Cathy has already made the corrections to Los Angeles, Orange and Arizona and will finish San Diego and Santa Barbara tomorrow." At that point it appeared that the matter was well on its way to a resolution.

Unfortunately, no evidence appeared over the next two days that the correction ordered by the committee actually had been distributed. On Friday, September 7th, Dave Sumner sent a follow-up message to Carl Gardenias requesting copies of the corrective e-mails, showing the addressees. An unsigned e-mail from came back almost immediately saying -- and again we quote: "Okay on Monday we are at the convention."

Dave Sumner replied, "Carl, I hope this means that on Monday you will send me a copy of the message that was sent soon after the Ethics and Elections Committee ordered that it be sent, last Wednesday. You acknowledged that instruction on the same day it was sent. A delay of several days in complying would not be acceptable to the committee."

The ARRL ays that nothing more was received from Gardenias over the next several days.

Having received no evidence that its instructions had been complied with, the Ethics and Elections Committee voted unanimously to disqualify Carl Gardenias. It also asked Dave Sumner to convey its decision to Gardenias. He did so by e-mail on September 13th.

The decision was announced on the ARRL Web site on September 14th. Also on that day, two messages of protest from Carl Gardenias were received by Dave Sumner.

On Monday, September 17th , Carl Gardenias filed an appeal with the ARRL Executive Committee. The appeal included a copy of the message forwarded to Dave Sumner on the previous Friday except that the date line read "Sent: Friday, September 07, 2007 10:30 PM." The Executive Committee then requested that Sumner try to determine whether any of the addressees had actually received the message that Carl Gardenias claimed had been sent on or about September 7th. K1ZZ sent separate messages to each of the other 22 addressees, except for two that clearly were bad. Of the remaining 20, 11 responded that they definitely had not received the message. Two others recalled seeing messages related to the election but could not say that they had seen the specific message in question. The others did not respond.

Some addressees did provide copies of a different "correction" message from Cathy Gardenias dated September 11th. The text of this message was inconsistent with the instructions that were given by the Ethics and Elections Committee on September 5th and that Carl Gardenias claimed on September 14th had been complied with on September 5th or 6th and later changed to September 7th.

On September 26, ARRL President Joel Harrison, W5ZN, and General Counsel Chris Imlay, W3KD, contacted Carl Gardenias by telephone to seek clarification of the apparent discrepancies. Gardenias reportedly said that the first time he understood exactly what the Ethics and Elections Committee had instructed him to do was when Arizona Section Manager Tom Fagan, WB7NXH, explained it to him at the convention. Gardenias claimed that he used Fagan's laptop to send the corrective message from the convention. In a separate conversation, Fagan said that he observed Carl and Cathy Gardenias prepare the corrective e-mail using his laptop. The discrepancy in dates and the fact that none of the addressees appears to have received the message have not been explained.

The Committee report goes on to state that while Carl Gardenias has acknowledged the instruction to send the specific corrective message to

everyone who received the original message, he has not produced evidence nor has he claimed that the correction was sent to anyone other than the 22 addressees on the September 1st message.

On September 27th the Executive Committee met by teleconference and voted unanimously, based on its own independent review, to affirm the decision of the Ethics and Elections Committee to disqualify Carl Gardenias as a candidate for Director of the ARRL Southwestern Division. This decision was communicated to WU6D on October 1st, along with detailed "Findings of Fact and Conclusions" of the committee.

In summary, the Executive Committee says that had the instructions of the Ethics and Elections Committee been followed on September 5th or reasonably soon thereafter -- as Gardenias said at the time would be done -- the Southwestern Division Director election would have proceeded normally. It says that the responsibility for failure to do so rests with the candidate.

The Executive Committee also states that it was not necessary for it to decide whether the failure was intentional or merely the result of negligence in order to affirm the decision of the Ethics and Elections Committee. However, the committee also concludes that the discrepancies in the Gardenias' various claims and explanations are troubling and might well provide a separate and independent basis for disqualification.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

Meantime, Cathy Gardenias, K6VC, the wife of disqualified candidate Carl Gardenias, WU6D, has responded to the ARRL Executive Committee findings. In a posting on the QRZ.com website, Mr. Gardenias expresses her belief -- and we quote -- "that evidence was presented to Mr. Sumner as secretary for the Election and Ethics committee and Executive Committee via his e-mail address and some of the evidence appears to have not been received by the Executive Committee."

Mrs. Gardenias also addresses several unanswered questions. This includes asking why the League keeps insisting that the Gardenias's used the ARRL server and website when they say that they

did not do so. K6VC claims the ARRL report is presented that way to make it appear as if they did something dishonest or misleading using their positions in the League's Orange Section which she says is defiantly not the case.

K6VC also expresses her view that the ARRL does not mean anything to her anymore. That she no longer believes in it and find that it cannot be trusted to represent the Amateur Radio community. She says that it only represents an organization of what she describes as "Good Ole Boys." This she says is sad because we will be the losers.

Her complete statement and the comments of others both pro and con are at:
http://www.qrz.com/ib-bin/ikonboard.cgi?s{31e2b3b41709267de508588be912a9;act=ST;f=3;t0569;st%

Forty years ago today, October 12, 1967, FCC issued a Novice license to a 13-year-old kid in the 7th grade. The license arrived two days later, and the kid (me) went on the amateur bands for the first time October 14, 1967.

Since then, I've has had three amateur radio callsigns, six "permanent" QTHs, a long list of rigs, antennas, parts and test equipment, awards earned, articles published, and tens of thousands of QSOs. Many things in amateur radio are different now than they were then, many things are the same.

One thing that hasn't changed is that ham radio is sure a lot of fun.

Doesn't seem like 40 years, though.

What do others remember?

73 de Jim, N2EY

==> ARRL ON-LINE AUCTION PREVIEW STARTS WEDNESDAY

The 2007 ARRL On-Line Auction Preview starts Wednesday, October 17 and officially begins October 24, running through November 2. According to ARRL Business Services Manager Debra Jahnke, K1DAj, the Auction will feature more than 150 items. "This year, browsers and bidders will find a vastly increased amount of QST Product Review gear." Rather than auctioning this equipment off separately as has been done in the past, the On-Line Auction will serve as the focal point for a majority of this

year's QST Product Review items. "We won't reveal just yet what items will be up for bid, but chances are very likely that if our readers have had their eye on a piece of equipment, it will be there," Jahnke said.

This year's auction will offer an especially diverse variety of items, including transceivers, amplifiers, antennas, amateur accessories and other amateur-related items. Jahnke said that through the ARRL On-Line Auction, "We'll be offering new gear, pre-owned and vintage gear, a fabulous vacation in St Croix, one-of-a-kind treasures and a virtual flea market."

When asked to provide amateurs with a partial list of items up for bid, Jahnke said "We're keep specific items under wraps until the Auction Preview that begins on October 17. Anyone interested can check this out at the ARRL On-Line Auction Web site <http://www.arrl.org/development/auction/>. But I can promise you that bidders will not be disappointed."

"We'd also like to thank the manufacturers, dealers, ARRL Business Partners and members and non members alike for their donations to the On-Line Auction," Jahnke said.

==> SECRETARY GENERAL OF ITU GETS AMATEUR RADIO LICENSE

Dr Hamadoun Toure, Secretary General of the International Telecommunication Union (ITU), received his Amateur Radio license October 8. Toure, who holds the call sign HB9EHT, is from Mali. He has a Master's Degree in electrical engineering from the Technical Institute of Electronics and Telecommunications of Leningrad and a PhD from the University of Electronics, Telecommunications and Informatics of Moscow.

ARRL Chief Executive Officer and IARU Secretary David Sumner, K1ZZ, said, "Dr Toure has recognized the value of Amateur Radio throughout his two terms as Director of the ITU Telecommunication Development Bureau and now as Secretary General. It is wonderful to be able to welcome him to our fraternity."

According to International Amateur Radio Club (IARC) President Attila Matas, OM1AM/HB9IAJ, IARC's station 4U1ITU will be operational as 4U1WRC during WRC-07 in Geneva later this month. They will be using newly installed antennas.

ITU is the leading United Nations agency for information and communication technologies. As the global focal point for governments and the private sector, ITU's role in helping the world communicate spans three core sectors: radiocommunication, standardization and development. ITU is based in Geneva, Switzerland, and its membership includes 191 Member States and more than 700 Sector Members and Associates.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Ray Fritts, KA8SYX, of Jacksonville, Florida, asks: If a piece of coaxial cable has a specified loss figure in dB per 100 feet at a given frequency, does that mean that the loss in a different length of the same cable that is a fraction of 100 feet long is the same fraction of loss? For example, I have a type of coax that has a loss of 6 dB per 100 feet at 150 MHz. I have a 15 foot length I want to use as a feed line for my 2 meter mobile SSB transceiver. Does that mean that my feed line would have a loss of about 0.9 dB, not including SWR and connector insertion? I am particularly interested in the loss in received signal. Is my math correct, or is there a different method to determine the amount of signal lost in a coaxial cable when the length is different from that for which the published loss figures are expressed?

The Doctor Answers -- Your calculations are right on. That's all there is to it. But do keep in mind just a few potential pitfalls:

Published cable loss data is for new cable. If used indoors in a non-hostile environment, it will stay close to new for many years. If the jacket allows moisture or moisture vapor to penetrate, it can degrade from subsequent corrosion. I have been amazed to find that the copper in some old cables that have been used outdoors has turned black from corrosion, and likely is no longer acting like a shield at all.

You are correct that the loss increases with an SWR higher than 1:1. For your receive case, keep in mind that the SWR is determined by the input impedance of the receiver -- not the antenna impedance. Sometimes receivers aligned for minimum noise figure do not have an impedance of 50 Ohms. Check your receiver specs.

Do you have a question or a problem? Send your questions to <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please).

==> THE NOVEMBER/DECEMBER NCJ IS ON ITS WAY

Now that "contesting season" is in full swing, you don't want to miss a thing and you can get in-depth contesting articles, techniques and information from the National Contest Journal (NCJ). This bi-monthly magazine from the ARRL features articles on contesting in all modes, including phone, CW and RTTY, product reviews and station profiles, as well as regular columns.

The November/December issue has an article by Al Dewey, K0AD, on how to put up a tower in a deed-restricted neighborhood. Doug Zwiebel, KR2Q, reveals his secrets for winning the 2007 ARRL DX CW (QRP) Contest, while Ed Sawyer, N1UR, writes about winning the 2007 ARRL DX and Phone (Low Power) Contest. Not to be outdone by the low power operators, Scott Robbins, W4PA/VY2PA, writes about winning ARRL DX CW in 2007.

If you're interested in the new Elecraft K3, you won't want to miss "RTTY Contesting with the Elecraft K3," by Ed Muns, W0YK. Carl Luetzelschwab, K9LA, reviews the KD9SV Reversible Beverage System.

Regular columns in the upcoming issue include "VHF-UHF Contesting" by Jon K. Jones, N0JK; "Contest Tips, Tricks and Techniques" by Gary Sutcliffe, W9XT; "RTTY Contesting" by Don Hill, AA5AU; "Workshop Chronicles" by Don Daso, K4ZA; "Contesting on a Budget" by Paul Schaffenberger, K5AF, and "Propagation" by Carl Luetzelschwab, K9LA.

NCJ is published by the ARRL and is a bi-monthly publication; it is edited by Carl Luetzelschwab, K9LA. Subscribe at <http://www.arrl.org/ncj/>.

==> FCC ENFORCEMENT ACTIONS

On October 5, the FCC's Enforcement Bureau released new Amateur Radio enforcement actions. Raymond W. Czyzewski, Jr, WA2SEI, of Interlachen, Florida, received notification from the FCC of a complaint alleging he "interfere[d] on the Six Meter Amateur band on June 19, 2007. The complaint also enclosed a threatening communication apparently from you to the complainant subsequent to the incident. The information contained in the complaint, if true, raises serious questions regarding your qualifications to retain an Amateur license." Czyzewski was given 20 days to respond and was directed to "support your response with a signed and dated affidavit or declaration under penalty of perjury, verifying the truth and accuracy of the information submitted in your response." He was warned that the FCC will use "all relevant information... including information that you disclose in your reply" to make a decision in his case, and that penalties could include "license revocation, suspension of your operator privileges, or monetary forfeiture (fine). Fines normally range from $7,500 to $10,000."

Guy E Weitl, WB6HGJ, of San Diego, California, received notification from the FCC of a complaint alleging "numerous instances of out of band operation on Twenty Meter frequencies 14.003, 14.005, 14.011 and 14.106 MHz, frequencies for which you are not authorized as a General Class licensee. The complaint also alleges that you have been sent several notices about out of band operation. The information contained in the complaint, if true, raises serious questions regarding your qualifications to retain an Amateur license." Weitl was given 20 days to respond and was directed to "support your response with a signed and dated affidavit or declaration under penalty of perjury, verifying the truth and accuracy of the information submitted in your response." He was warned that the FCC will use "all relevant information...including information that you disclose in your reply" to make a decision in his case, and that penalties could include "license revocation, suspension of your operator privileges, or monetary forfeiture (fine). Fines normally range from $7,500 to $10,000."

David B. Huston, WD8RFS, of Ely, Minnesota, received notification from the FCC regarding a complaint "concerning the operation of your repeater on 145.370 MHz. The complaint alleges lack of control and defective

signals and indicates that you have been contacted about these problems but have declined to address them." Huston was given 20 days to respond and was directed to "describe in detail" and include with his response "the procedures you use to control the repeater and provide the names and addresses of all control operators."

Darin W. Colville, KM0Q, of O'Fallon, Missouri, received notification from the FCC that he would face a six month restriction on his Amateur Radio license. The Commission said, "On March 16, 2007, we sent you copies of complaints received by the Commission concerning the operation of your Amateur station. The complaints alleged deliberate interference, broadcasting and failure to identify. Our letter stated that the information contained in the complaints, if true, raised serious questions regarding your qualifications to retain an Amateur license. We requested detailed information from you pursuant to Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. S: 308(b), which gives the Commission the authority to obtain information from applicants and licensees about the operation of their station and their qualifications to remain a licensee." After telephone conversations between Colville and FCC representatives, it was agreed that Colville would accept "a six month restriction on your license that would prohibit operation on any Amateur station on UHF or VHF for a period of six months in order to avoid further enforcement sanctions. That restriction is retroactive to July 9, 2007, and will end at midnight January 6, 2008."

James J. Grinton, K7VNI, of Bellingham, Washington, received a "Notice of Apparent Liability for Forfeiture" from the District Director of the FCC's Western Region Enforcement Bureau in Seattle and is apparently liable for a forfeiture in the amount of seven thousand dollars ($7,000)." The FCC said Grinton "apparently willfully and repeatedly violated Section 97.113(b) and Section 97.119(a) of the Commission's Rules ("Rules") by transmitting one-way communications and by failing to transmit his assigned call sign in the Amateur Radio Service."

Section 97.113(b) of the Rules states that "[a]n amateur station shall not engage in any form of broadcasting, nor may an amateur station transmit one-way communications..." Section 97.119(a) of the Rules states that "[e]ach amateur station, except a space station or telecommand station, must transmit its assigned call sign on its transmitting channel at the end of each communication, and at least every 10 minutes during a communication, for the purpose of clearly making the source of the transmissions from the station known to those receiving the transmissions."

The FCC noted the following timeline:

On December 7, 2006, in response to a complaint alleging intentional interference to Amateur Radio communications on the 146.340/146.940 MHz repeater (VE7RPT) repeater, an agent from the FCC's Seattle Office, used mobile direction finding techniques, to locate the source of the signal to the residence of James Grinton, K7VNI, in Bellingham, Washington."

During the period of December 9, 2006-January 1, 2007, the Seattle agent monitored 146.340 MHz and observed 59 transmissions of varying lengths from Grinton's residence.

On January 19, 2007, the Seattle Field Office issued a "Warning of Interference to Communications" to Grinton. The Warning Letter informed Grinton that his station may be the source of willful or malicious interference to amateur communications and that if the "transmissions continue, you will be investigated during ongoing FCC enforcement efforts. If such an investigation indicates that you have violated the Communications Act or any FCC Rules, you could be subject to severe penalties, including, but not limited to, substantial monetary forfeitures, and criminal sanctions including imprisonment."

On January 25, 2007, Grinton received and signed a receipt for the Warning Letter, but did not send a response to the Seattle Office.

On February 27, 2007, in response to continued complaints, a Seattle agent using mobile direction finding techniques, again located the source of a signal on 146.340 MHz to Grinton's residence in Bellingham, Washington. The Seattle agent monitored and recorded 17 minutes of a continuous transmission of one-way communications of music by Grinton on 146.340 MHz.

On March 5, 2007, the Seattle agent, again used using mobile direction finding techniques to locate the source of a signal on 146.340 MHz to Grinton's residence in Bellingham. The Seattle agent monitored and recorded 15 minutes of a continuous transmission of one-way communications of music by Grinton on 146.340 MHz.

During the period of January 19, 2007-June 23, 2007, the Seattle agent monitored 146.340 MHz and observed 163 transmissions by Grinton in which he failed to transmit his assigned call sign (K7VNI)

The FCC concluded that "Pursuant to the Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, ('Forfeiture Policy Statement'), and Section 1.80 of the Rules, the base forfeiture amount for unauthorized emissions is $4000 and base forfeiture amount for failure to provide station ID is $1000. "In assessing the monetary forfeiture amount, we must also take into account the statutory factors set forth in Section 503(b)(2)(E) of the Act, which include the nature, circumstances, extent, and gravity of the violations, and with respect to the violator, the degree of culpability, and history of prior offenses, ability to pay, and other such matters as justice may require. Based on the criteria in Section 503(b)(2)(E) of the Act, and the upward adjustment criteria in the Forfeiture Policy Statement, we find that an upward adjustment of the base forfeiture amount of $1000 for failure to provide station ID is warranted. Grinton apparently failed to transmit his amateur operator call sign on over 160 transmissions in a five month period. Grinton had previously been warned by the Seattle Office concerning FCC Rule violations. Considering the entire record and applying the factors listed above, we conclude that Grinton is apparently liable for a

forfeiture in the amount of $3000 for his failure to provide station ID, and is apparently liable for a $4000 forfeiture for unauthorized emissions."

Grinton has until October 25 to either pay the forfeiture or appeal.

==> ARRL EXECUTIVE COMMITTEE EXPLAINS REASONING FOR UPHOLDING ETHICS AND ELECTION COMMITTEE'S DECISION TO DISQUALIFY SOUTHWESTERN DIVISION DIRECTOR CANDIDATE

The ARRL Executive Committee met the first weekend in October in Little Rock, Arkansas. One item on their agenda was of the appeal of Carl Gardenias, WU6D, concerning his disqualification from the race for Southwestern Division Director. Last month, the League's Ethics and Elections Committee declared Gardenias disqualified to stand for election in that race. What follows is the ARRL's Executive Committee's summary (in its entirety) affirming the decision of the Ethics and Elections Committee:

Summary of Events Leading to the Disqualification of Carl Gardenias, WU6D, as Candidate for Director of the ARRL Southwestern Division

In accordance with the bylaws of the ARRL, July and August QST carried solicitations for candidates for Director and Vice Director in five of the 15 ARRL divisions. Two candidates for Director of the Southwestern Division, encompassing southern California and Arizona, were nominated and initially found to be eligible by the ARRL Ethics and Elections Committee: incumbent Dick Norton, N6AA, and challenger Carl Gardenias, WU6D, who is currently serving as Section Manager of the ARRL Orange Section. Announcement of their eligibility was made on August 27.

The ARRL Ethics and Elections Committee is made up of three volunteer Directors, appointed by the President for one-year terms, from among those who are not subject to election that year.

A series of subsequent actions and inactions, by and on behalf of Mr Gardenias, led the Ethics and Elections Committee by unanimous vote to disqualify him as a candidate and to declare the one remaining eligible candidate, Dick Norton, N6AA, re-elected. Mr Gardenias appealed this decision to the ARRL Executive Committee. The voting members of the Executive Committee are the President and five Directors, none of whom happen to be members of the Ethics and Elections Committee. After consideration of the appeal, including additional material submitted by Mr Gardenias, the Executive Committee voted unanimously to uphold the decision of the Ethics and Elections Committee.

Full members in the Southwestern Division had expected to have the opportunity to choose between two candidates for Director, and are entitled to an explanation of what led to the disqualification of Mr Gardenias.

The series of events began on August 30 when Mr Gardenias' wife Cathy, K6VC, identifying herself as Assistant Section Manager responsible for

the Orange Section newsletter, asked ARRL Secretary David Sumner, K1ZZ to review an article about the division election for the section newsletter. Mr Sumner responded, pointing out several changes that should be made.

On September 3, Mr Sumner received an inquiry from Mr Norton forwarding a copy of an e-mail signed by Cathy Gardenias that had been sent on September 1 from gardenias@verizon.net, an e-mail address that is used by both Carl and Cathy Gardenias, to 22 addressees in the Orange as well as other Southwestern Division Sections. The e-mail contained the article with the requested changes made, but material not reviewed by Mr Sumner had been added along with the unauthorized and inaccurate statement, "Approved by the ARRL k1zz." The additional material, having to do with candidates' Web sites, was incomplete and in any case was not appropriate for inclusion in an official ARRL communication because of restrictions on the distribution of campaign material via official channels.

Early on September 4, Mr Norton filed a complaint with the Ethics and Elections Committee on the basis of the September 1 message and sent copies to both Carl and Cathy Gardenias. Mr Norton proposed several remedies, none of which included disqualification. Later that day, Cathy Gardenias sent e-mails to a number of addressees with "Corrections to information sent out on August 28, 2007 regarding up coming elections." The reference to August 28 was erroneous and caused some confusion; while Mr Gardenias later confirmed that the message had been sent to some other addressees on August 30 and 31, it had not been sent as early as August 28. Neither did the September 4 message correct everything that was wrong with the original message.

The Ethics and Elections Committee met by teleconference on Tuesday evening, September 4, to discuss several matters including Mr Norton's complaint. Under ARRL election rules, a standard of truth applies to all mailings by candidates. The committee concluded that the appropriate remedy in this case was to require Mr Gardenias to distribute specific text of a correction and apology to everyone who had received the original message, including addressees who were not known to the committee. On September 5 Mr Sumner communicated specific instructions to Mr Gardenias, who acknowledged and said "Thank you, Cathy has already made the corrections to LAX ORANGE, AZ and will finish SDG and SB tomorrow." At that point it appeared that the matter was well on its way to a resolution.

Unfortunately, no evidence appeared over the next two days that the correction ordered by the committee actually had been distributed. Therefore, on Friday, September 7 Mr Sumner sent a follow-up message to Mr Gardenias requesting copies of the corrective e-mails, showing the addressees. An unsigned e-mail from gardenias@verizon.net came back almost immediately saying, "Okay on Monday we are at the convention" [the Southwestern Division Convention], to which Mr Sumner replied, "Carl, I hope this means that on Monday you will send me a copy of the

message that was sent soon after the Ethics and Elections Committee ordered that it be sent, last Wednesday. You acknowledged that instruction on the same day it was sent. A delay of several days in complying would not be acceptable to the committee."

Nothing more was received from Mr Gardenias over the next several days.

Having received no evidence that its instructions had been complied with, the Ethics and Elections Committee voted unanimously to disqualify Mr Gardenias and asked Mr Sumner, who by that time was in Brasilia attending the IARU Region 2 Conference, to convey its decision to Mr Gardenias. He did so by e-mail on September 13. The decision was announced on the ARRL Web site the following day, September 14. Also on that day, two messages of protest from Mr Gardenias were received by Mr Sumner. One forwarded what was purported to be a copy of a message containing the text as ordered by the Ethics and Elections Committee to the 22 addressees on the September 1 message, plus Mr Sumner (although Mr Sumner had not received it). This message was identified as "Here is what was sent on Friday Sept. 5, 2007 to all concerned and you were BCC:" Curiously, the message as forwarded carried the date line "Sent: Friday, September 06, 2007 10:30 PM."
That Friday was actually September 7.

On Monday, September 17, Mr Gardenias filed an appeal with the ARRL Executive Committee. The appeal included a copy of the message forwarded to Mr Sumner on the previous Friday except that the date line reads "Sent: Friday, September 07, 2007 10:30 PM." The Executive Committee requested that Mr Sumner try to determine whether any of the addressees had actually received the message that Mr Gardenias claimed had been sent on or about September 7. Mr Sumner sent separate messages to each of the other 22 addressees, except for two that clearly were bad addresses. Of the remaining 20, 11 responded that they definitely had not received the message. Two others recalled seeing messages related to the election but could not say that they had seen the specific message in question. The other addressees did not respond.

Some addressees did provide copies of a different "correction" message from Cathy Gardenias dated September 11. The text of this message is inconsistent with the instructions that were given by the Ethics and Elections Committee on September 5 and that Mr Gardenias claimed on September 14 had been complied with on September 5 or 6 (later changed to September 7).

On September 26, ARRL President Joel Harrison, W5ZN, and General Counsel Chris Imlay, W3KD, contacted Mr Gardenias by telephone to seek clarification of the apparent discrepancies. Mr Gardenias said that the first time he understood exactly what the Ethics and Elections Committee had instructed him to do was when Arizona Section Manager Tom Fagan, WB7NXH, explained it to him at the convention. Mr Gardenias claimed that he used Mr Fagan's laptop to send the corrective message from the convention. In a separate conversation, Mr Fagan said that he observed Carl and Cathy Gardenias prepare the corrective e-mail using his laptop.

The discrepancy in dates and the fact that none of the addressees appears to have received the message have not been explained. While Mr Gardenias has acknowledged the instruction to send the specific corrective message to everyone who received the original message, he has not produced evidence nor has he claimed that the correction was sent to anyone other than the 22 addressees on the September 1 message.

On September 27 the Executive Committee met by teleconference and voted unanimously, based on its own independent review, to affirm the decision of the Ethics and Elections Committee to disqualify Mr Gardenias as a candidate for Director of the ARRL Southwestern Division. This decision was communicated to Mr Gardenias on October 1, along with detailed "Findings of Fact and Conclusions" of the committee.

In summary, had the instructions of the Ethics and Elections Committee been followed on September 5 or reasonably soon thereafter -- as Mr Gardenias said at the time would be done -- the Southwestern Division Director election would have proceeded normally. The responsibility for failure to do so rests with the candidate. It was not necessary for the Executive Committee to decide whether the failure was intentional or merely the result of negligence in order to affirm the decision of the Ethics and Elections Committee. However, the discrepancies in the Gardenias' various claims and explanations are troubling and might well provide a separate and independent basis for disqualification.

(signed) ARRL Executive Committee, October 6, 2007

==>SOLAR UPDATE

Tad "'Cause You Shine Like the Midnight Sun" Cook, K7RA, this week reports: Average sunspot number for the past week is about half what it was the week before, but this doesn't mean much, since only two days of the last seven had any sunspots. In fact, the Sun showed spots on only seven of the last 29 days. Geomagnetic indices (the A and K index) have been very quiet lately. The US Air Force predicts the planetary A index to stay around 5 (which is very quiet) for October 12-16. October 26 is the next time they predict active conditions, with a planetary A index of 25. Since October 6, the planetary A index has been below five. Geophysical Institute Prague predicts quiet to unsettled conditions for today, October 12, quiet conditions on October 13-16 and unsettled conditions October 17-18. I suspect we won't see sunspots any time soon, although this can change. It seems we are still in the bottom of the cycle. Sunspot numbers for October 4-10 were 0, 0, 15, 13, 0, 0 and 0 with a mean of 4. The 10.7 cm flux was 67.3, 67.8, 69, 68.1, 68.1, 68.7 and 68.1 with a mean of 68.2. Estimated planetary A indices were 10, 7, 5, 4, 3, 3 and 3 with a mean of 5. Estimated mid-latitude A indices were 8, 5, 3, 1, 0, 0 and 1 with a mean of 2.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This weekend on the radio: This weekend, the ARRL School Club Roundup is October 15-19. The NCCC Sprint (CW) is October 12. The Microwave Fall Sprint, EU Autumn Sprint (CW) and FISTS Fall Sprint are October 13. The Makrothen RTTY Contest, Oceania DX Contest (CW) and Pennsylvania QSO Party are October 13-14. The North American Sprint (RTTY) and UBA ON Contest (SSB) are October 14. Next week, be sure to mark your calendars for the NCCC Sprint (CW) on October 19. October 20 is the Feld Hell Sprint, while the weekend of October 20-21 hosts the JARTS Worldwide RTTY Contest, the ARCI Fall QSO Party, the Worked All Germany Contest, the Stew Perry Topband Challenge, the W/VE Islands QSO Party, the 070 Club 160 Meter Great Pumpkin Sprint and the 50 MHz Fall Sprint. The Asia-Pacific Fall Sprint (CW) and UBA ON Contest (2 Meter) are October 21. The Illinois QSO Party is October 21-22 and the Run for the Bacon QRP Contest is October 22. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, October 21 for these online courses beginning on Friday, November 2: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News Friday, October 12: There will be no ARRL Audio News October 12. The ARRL Audio News will return next week, Friday, October 19.

* Newly Elected Section Managers Converge on Newington: This weekend, those Section Managers who are new to their post are in Newington for an orientation. Delaware Section Manager Frank Filipkowski, AD3M; Kentucky Section Manager Jim Brooks, KY4Z; Sacramento Valley Section Manager Ron Murdock, W6KJ; Puerto Rico Section Manager Roberto Jimenez, KP4AC, and San Diego Section Manager Mitch Mitchell, K6BK, are in attendance. According to Supervisor of the ARRL Field Organization Team Steve Ewald, WV1X, "The Section Manager Workshop is an orientation and training event for new Section Managers that have come on board within the last year or so. ARRL has conducted this training once a year at HQ for the past several years, and it has been well received by past participants. The Membership and Volunteer Programs Department Staff, and its Field Organization Team are the lead coordinators of the event." The primary purposes of the Workshop sessions are to share ideas and to provide basic administrative, management, leadership and motivational training. "We also cover the responsibilities and functions of the Section Manager's position, and the SMs are able to visit with ARRL Headquarters

staff members and learn more about the many programs that ARRL supports. The Workshop sessions are presented by several ARRL Headquarter staff members who are experts in their respective areas," Ewald said.

* Special Offer for Diamond Club Members: ARRL Chief Development Officer Mary Hobart, K1MMH, reminds League members that now is a great time to join the Diamond Club or renew your Diamond Club membership. "For Diamond Club contributions of $100 or more before December 31, you will receive a 2008 ARRL calendar. This offer is good for new and renewing Diamond Club members." If you join at the Brass level ($250) or higher, you can also get a brick (with engraving up to three lines) placed in the ARRL Diamond Terrace.

* New Contest Manager on the Job: Sean Kutzko, KX9X, joined the ARRL Headquarters staff on October 8 as the ARRL Contest Manager. First licensed in 1982 as KA9NGH, Kutzko developed a taste for contesting after winning the Illinois section in the 1988 ARRL Novice Roundup. Since then, he has been active in both HF and VHF contesting, as well as HF DXing and VHF weak-signal communications. A long-standing member of the Society of Midwest Contesters (SMC) and a strong advocate of mentoring new contesters, Kutzko has won several contest and DX awards, including several Top Ten finishes in the ARRL Sweepstakes SSB contest as a QRP entrant. He has been on two HF contest DXpeditions, including 6Y7M in the 1994 CQ WPX CW contest, and V26NA in the 1997 ARRL International DX CW Contest. Kutzko also enjoys activating rare grid squares by going on "Grid DXpeditions" in the continental US for the VHF/UHF community. In the late 1990s, Kutzko published a regular column in the National Contest Journal (NCJ) that focused on DX locations available for hams to rent for contests or DXpeditions. "It's a great honor to be the Contest Branch Manager. Everybody at HQ has been very friendly and generous of their time and knowledge for me, the newcomer. There is a lot of work from several folks -- hams and non-hams alike -- that goes on behind the scenes to keep your contest logs properly scored and managed. While I still have a lot to learn, rest assured that as a fellow HF and VHF contester myself, my primary interest is to ensure logs are received and processed correctly, scores are reported quickly and accurately and awards are mailed in a timely fashion. Feel free to contact me with any contest-related questions you may have. You can reach me at 860-594-0232 or via e-mail <kx9x@arrl.org>. I am at your service," Kutzko said.

* AA8EY Wins 2007 Severson Award: ARRL Ohio Assistant Section Manager William Carpenter, AA8EY, of Westerville, Ohio, was named as the 14th recipient of the Allan Severson, AB8P (SK) Memorial Award. Ohio Section Manager Joe Phillips made the award presentation at the Ohio Section Conference last month. The Severson award, named for former Great Lakes Division Director Allan Severson who died in 1997, is issued to an Ohio ham radio operator who exemplified Allan's spirit of service to Amateur Radio. Carpenter is the former Emergency Coordinator of Franklin County (Columbus); he received the award for his work as EC. His Severson certificate read, "For his ground breaking role in organizing emergency

communications in Central Ohio and establishing a model for a county EC position." Though Allan Severson had an impressive resume during his lifetime of service to the ARRL, Phillips, in making the presentation, said that it is rarely spoken. "Al's true work in the League was his talent to inspire others to do their best; he was just a very special presence." Instead of citing a resume, the award honors the work of Allan with a single sentence written on every award certificate - "Allan's devotion to serve Amateur Radio inspired a whole generation of Ohio Section leadership."

* Military World Games in India Using Call Sign AT0MWG: The Military World Games take place in India October 14-21. Games organizers approached the Amateur Radio Society of India (ARSI), India's IARU Member-Society, to support them with Amateur Radio stations at various game locations. As such, a special call sign, AT0MWG, will be in use October 9-21. The venues for the games are Mumbai (for the sailing events), and Hyderabad and Secunderabad for other events. ARSI stations will operate from all locations on CW, SSB, digital and EchoLink. A special QSL card will be made for this call. The QSL Manager for the event is Sarla Sharma, VU2SWS, 7 Gaurav Apts, Behind Ashok Nagar, Nahur, Mulund, West Mumbai - 400 080 India. Non-Indian stations should send one IRC and a self-addressed envelope. Indian stations should send a self-addressed, stamped envelope. -- Thanks to The Daily DX for the information

* Let Us Know What You Think: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

:-) When a teen, my novice license arrived Friday the 13th, September 1963. My first QSO was that night on 80m on 3706 Kc with a fellow in Schoharie, NY. That was my only crystal. With crystals, we had to learn to listen all over our 50 Kc available band of 3700 - 3750.

My friend Gary and I went down to the FCC office in Manhattan to take the General exam just a few days before they were going to impose a $4 fee. Ouch! We had a deadline to meet! We couldn't afford to pay $4! Well, we both passed, and Gary called his mom to tell her the good news. Once we arrived back to his house it was apparent that his mother told a neighbor the good news because, as we walked by the neighbor's house, she exclaimed to us, "So now you're Captains!?"

I was also first licensed in 1963 and I think I had three crystals, but
one was 3706. That must have been a common frequency for a surplus xtal.

I do remember listening the whole band for a call from a CQ. You picked
the closest frequency you had a crystal for. I also remember that it
was somewhat common for QRM to pop up because the station transmitting
had a limited selection of crystals and didn't always listen on the
frequency that they were about to transmit.

But it sure was fun.

I met a fellow novice on 80 meters and he traveled to Knoxville to take
his General exam on the same day I did. We met there. He was so
nervous that he literally could not fill out the FCC-610 form. But
somehow he managed to calm himself enough to pass the CW test. Perhaps
it was the CW that did it. By then we were routinely chatting at speeds
more than the required 13 wpm.

I took the General with a friend, too. He was very good at theory. I
was very good at code. Somehow he managed to squeak by the code test,
but he failed the theory test. I think that he got one answer off on
the answer sheet and was putting down his answers for the wrong number;
there's no way he could have failed that theory test.

I'm about to teach a Technician class beginning at the end of the month.
Times have changed. No longer is the entry license the Novice and one

must use the one-year term to build up code speed for the General. Instead I'll be trying to figure out how to teach both concepts and the question pool. It will be interesting. (I don't think I've taught a license class in the past two decades.)

But the fun remains in the hobby. Some things change and some things remain the same. Thanks for the memories.

Happy... emm... license day... Jim :o)

I was born in1967 so less history here. Didnt get my license until I was 26 years old in 1993. I recall my first contact like it was yesterday. Sitting at my desk with a my new license and an FT480 on the FM calling frequency wondering what I should do next.

I'm on my fourth callsign, from two countries. Planning another move so number 5 on its way.

Many things in amateur radio change. But the basics will always be the same.

SARL NEWS SUNDAY 14 OCTOBER 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

You can download this and previous bulletins from www.sarl.org.za and you can also subscribe there to receive future bulletins by email.

Your news reader this morning is Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, and 51,400 MHz as well as 438,825 and 1 297 MHz in the Pretoria area. (Other newsreaders please change to suit).

In the news today:

DON'T LET THE QSL BUREAU BE CLOGGED UP WITH YOUR CARDS

CAN YOU HOST A SARL/HMO BEACON?

ANOTHER SUBSCRIPTION REMINDER FOR MEMBERS WHO HAVE NOT YET RENEWED

CLUBS INVITED TO REGISTER TO BECOME A REGIONAL ZU EXAMINATION CENTRE

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

DON'T LET THE QSL BUREAU BE CLOGGED UP WITH YOUR CARDS

This is an urgent message for members of the SARL: please don't let the QSL bureau be clogged up with your incoming QSL cards. Send a self addressed stamped envelope to the QSL bureau so that cards can be despatched to you on a regular basis. Please take careful note of the following. If you send DL size envelopes, a standard mail postage stamp is sufficient. A DL size envelope will accommodate up to 10 cards. If you are an avid DXer, send a larger envelope. The postage requirements are as follows: For a B5 envelope also referred to as a C5, the postage is R3,90. For a B4 envelope, also referred to as A4, the postage is R4,89. Remember that postal rates are increased on April 1 each year, so, if you require your cards to be mailed to you monthly, send 12 envelopes in April each year or as required. After April each year the envelopes can no longer be used as they will carry insufficient postage.

The QSL bureau is part of the services a member receives. The outgoing QSL service is only available to SARL members.

The address of the QSL bureau is SARL QSL Bureau, P O Box 1721 STRUBENSVALLEI 1735.

CAN YOU HOST A SARL/HMO BEACON?

Radio amateurs are needed to host beacons in a number of rural towns. If you live in one of the following areas, please consider joining the beacon programme.

Swellendam, Western Cape; Lamberts Bay / Graafwater, Western Cape; Queenstown, Eastern Cape; Umtata, Eastern Cape; Sutherland, Northern Cape; Pofadder, Northern Cape; Kenhardt, Northern Cape; Kokstad, KwaZulu Natal; Louwsburg / Vryheid, KwaZulu Natal; Mmbatho, North West; Klerksdorp, North West; Bothaville, Free State.

To qualify for hosting a beacon you need to be licensed and be a member of the SARL. Please email Lee-Anne at beacon@hmo.ac.za if you would like to be part of the programme. There is no cost involved as the beacon is supplied free, complete with antenna, power supply and lightning protection.

The beacon service will be of great value in confirming actual propagation conditions in real time for research and prediction of the ionosphere. The Space Physics Group of the HMO includes an active ionospheric component, and provides ionospheric data for the purpose of Space Weather predictions, which includes HF propagation prediction. The HMO has recently become the Space Weather Regional Warning Centre for Africa, which includes amongst other parameters the provision of HF propagation predictions.

A number of volunteer radio amateurs will host beacons at their stations. A centralized database will be maintained that contains a record of each beacon, its host amateur and its time slot. A test beacon is in operation from the Krugersdorp area. Listen to it on 7 023 kHz. More details and useful links are on www.sarl.org.za.

ANOTHER SUBSCRIPTION REMINDER FOR MEMBERS WHO HAVE NOT YET RENEWED

As reported in last week's SARL News, membership invoices were mailed in June, with follow-up reminders in August and September. If you have not yet renewed your membership, please do it as soon as possible. Members who have not remitted their dues by the end of October will no longer receive Radio ZS or have access to the member-only section of the SARL web. Your membership is important for Amateur Radio; it is our collective voice through the SARL, the national Body for Amateur Radio, which needs to be strong and representative. Your membership makes that difference. If you are not a member yet, it is never too late to join. Application forms are available on www.sarl.org.za.

CLUBS INVITED TO REGISTER TO BECOME A REGIONAL ZU EXAMINATION CENTRE

Clubs affiliated to the SARL are invited to become regional ZU examination centres. After registration a club may arrange examinations for the entry level amateur radio license as frequently as required. Full details are available in the members' only section of the SARL web. Visit www.sarl.org.za, click on member button on the top left of the home page and enter the callsign and password.

The current arrangements to hold examinations nationally for all classes twice annually remain unaltered.

CQ HOU KOERS ON SATURDAY THE 20TH OF OCTOBER

CQ Hou Koers, the Voortrekkers' annual radio communications day, is taking place on Saturday the 20th of October. More than fifteen stations will be active countrywide. Please support this initiative and spare a few minutes to talk to the enthusiastic youngsters. All contacts are welcomed and a special QSL card is available.

If you are able to provide assistance to your local Voortrekker group, please contact Gerhard, ZS6GSC, at e-mail address gerjan@absamail.co.za or Andries, ZS6VL, e-mail andries.visagie@natref.com. For the latest news, see the forums section on the SARL website.

CLUB NEWS

The Pretoria Amateur Radio Club held their 77th AGM on Saturday the 29th September 2007. The new committee was elected with Almero du Pisani, ZS6LDP, as chairman. Almero will be assisted by the following members: Johan de Bruyn, ZS6JHB; Richard Peer, ZS6UK; Craig Symington, ZS6RH; Pierre Holtzhausen, ZS6PJH; Co-opted committee, members: Graham Reid, ZR6GJR; Johann de Beer, ZR6YV; Johan Lehman, ZS6JPL; Hans Kappetijn, ZS6KR; Willie Greyling, ZR6GJR. Roy Newton, ZS6XN; Tjerk Lammers, ZS6P; Andre van Tonder, ZS6BRC; Molly Peer, ZR6MOL; Doreen de Bruyn, ZR6DDB; Thobile Koni, ZS6TDK.

Thank you to the outgoing committee and welcome to the newly elected committee.

The Midlands Amateur Radio Club is planning to establish, on Saturday, 13th October, 2007, at 09:00, a ten week course in basic electronics. The venue is the Clubhouse, situated at the Natal Carbineers Drill Hall, in Geere Street, Pietermaritzburg. This plan has been widely advertised in the local press. Students will be charged R80 for the complete course, a sum which includes a free Course Manual. Those interested in this programme should contact Bert Cornell, ZS5MQ, on telephone number 033 344 3659.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to be quiet in general increasing to unsettled levels on 17 till 20 October. The expected Effective Sun Spot number for the coming week will be less than 5. Fortunately with the arrival of summer DX conditions are also

warming up a bit, that is if there is enough electricity to power your rig!

15 m and 20 m will provide best opportunities for DX. There is a possibility of 15 and 20 m openings towards India from about 14:00 CAT. There may be 20 m openings to Australia from about 06:00. From 15:00 there may be 15 and 20 m openings towards Europe. You may also give 10 m a try. From 18:00 there may be 15 and 80 m openings towards the USA.

For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally conditions on 40 m are going to be good during the day and even 30 m may perform well over the longer distances.

It is once again time to work towards your 80 m WAZS award in the evenings. Remember that this is only a prediction and that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

13 October - Midlands Amateur Radio Club's Basic electronics course begins; 18 October - Class A RAE; 20 October - Deadline for comments on SARL 2008 Competition Handbook; 20 October - Voortekker's CQ Hou Koers; 20 and 21 October - JOTA and JOTI.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 590 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Roger, ZR3RC, and transmitted by (your name and call sign).

Thank you for listening. 73.

/EX

1 GB2RS NEWS Sunday 14 October

The news headlines

* JOTA golden jubilee

* Sputnik celebrates 50th birthday

* GB2RS drops MT63 JOTA will be celebrating its golden jubilee over the weekend of 20 and 21 October. The theme for scouts this year is 'around the world in 50 hours'. Many special event stations are planned in the UK and worldwide. Around 130 UK special event callsigns have been issued.

As announced in the September RadCom, the RSGB is actively supporting JOTA with promotional materials. Packs containing leaflets, posters and associated resources, are available free of charge from RSGB HQ. To order a pack, please send a large stamped self-addressed envelope to the amateur radio department as soon as possible. Packs will be dispatched by return but delivery times cannot be guaranteed due to the current postal disruption.

As you may have read in the October issue of RadCom, Sputnik 1 celebrated its 50th anniversary on October 4. AMSAT heralded the event on the morning of 4 October by using AO-51 to retransmit the original Sputnik-1 telemetry. Once again listeners could hear the haunting beep-beep-beep from space.

For the last five years the GB2RS news has been transmitted using the MT63 data mode. It was transmitted on Sunday evenings at 2015 local time on 3600kHz and again at 2045 on 1840kHz. This proved popular initially, but a survey carried out recently has found that few people are now making use of it. This is probably because PC users are downloading the news from the RSGB web site at their convenience. It has therefore been decided that the MT63 data news bulletins will terminate after the transmissions on Sunday 28 October. Some experimental data bulletins will continue to be made on 5279kHz as part of the ongoing 5MHz Experiment. Any enquiries should be directed to the GB2RS News Manager Gordon, G3LEQ, on 01 565 652652.

In World War 2 the Colossus computer was created to help break Enigma coded messages. The originals were destroyed after the War, but a working example has recently been rebuilt. The work took 10 years, #1.2 million, and immense efforts from volunteers. To mark the completion of the rebuild, a special celebration will be held on 15 and 16 November at Bletchley Park. A series of messages will be enciphered on a WWII

Lorenz cipher machine. It is planned that the codes will be transmitted using six tone RTTY from the Heinz Nixdorf Computer Museum in Germany, in the same format transmitted in WWII. The signals will be received by a replica 'Y' station and fed to Colossus for decoding. The RSGB hope to bring you a report on the Colossus Mk 2 in a future issue of RadCom.

The November issue of RadCom will be posted during the week commencing 15 October. Due to the current disruptions within the postal service, deliveries may be delayed. Members are asked to be patient and allow extra time before contacting the RSGB to query non-delivery.

2 Members of the Wythall Amateur Radio Club and Contest Group will be taking part in the CQ World Wide DX SSB Contest. They will be on the air from the Pembrokeshire coast on October 27 and 28. The group will be using the club's callsign MW5W and enter the contest as a Multi-Multi entry with three stations. Some of the operators will be on the air before the contest, signing their own callsign. For more information log onto www.wythallradioclub.co.uk/.

And now for the details of rallies and events for the coming week

[Note to newsreaders: Please use your judgement on whether to read the 14 October event, based on your time slot and distance from the event.] On Sunday 14 October Great Lumley Amateur Radio Club are holding their rally from 10.00 at the Great Lumley Community Centre. For more information contact Nancy Bone, G7UUR, on 0191 477 0036 or email nancybone2001@yahoo.co.uk. On Sunday 21 October Blackwood & District Amateur Radio Society is running its annual Amateur Radio Rally. The RSGB Regional Manager Gareth Price, GW3MPP, will be in attendance with the RSGB Book Stall. He will be making a presentation to the Blackwood & DARS, who are celebrating their 75th anniversary and the presentation to the winner of the RSGB CDXC Cup. For rally details contact Dave, GW4HBK, on 01495 228516 or by email to ddlewhbk@btinternet.com. More details of these and future events can be found on pages 88 and 89 of the October edition of RadCom. Now for the news of special events Warrington Amateur Radio Club will be celebrating its 60th anniversary year by operating the special call sign GB6WRS throughout the month of October. The station will be active on all bands each day of the month. The Galway Radio Experimenters Club will be running a special event station EI100MFT on 13 to 17 October from Clifden in Ireland. The club will be celebrating when Guglielmo Marconi sent his first commercial message from the station at Clifden. Special event station PA50JOTA will be active on 17 to 31 October from Nieuweroord to celebrate the Golden Jubilee of the Jamboree On The Air. QSL via PA3EFR. The Border Rievers Amateur Radio Society will be operating as MX0BRS/Jota on 18 October, from Cramlington, participating in the JOTA weekend. The station will be on the air from 1000 till 1800, operating on HF, VHF and UHF on voice and CW modes. Full details for the event can be found on their website www.brars.co.uk. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Dave, G3TBK, will be active again using callsign J88DR from Wednesday 11 October until the end of the month. Activity will be on all HF Bands, using CW, SSB and RTTY. SSTV can be operated on request. QSL either direct to home call or via RSGB Bureau. Leo, IZ5FSA, Stefano, IW5DPF and Luca, I5IHE, will be active as S79LL, S79SO and S79LC from Praslin Island (AF-024), Seychelles on 14 to 19 October. QSL via home calls, direct only.

3 Look for Ermanno, SV0XAN/5, to be active from the islands of Lipsi, Agathonisi and Arkoi, Dodecanese, EU00 until 20 October. QSL via IK2WZD. John, KE6GFF, will be in Afghanistan for the third time and will operate from Kabul as T6EE from 18 October to 12 November. Look for him on or around 14210kHz. QSL via home call John Kountz, 1065 van Dyke Dr Laguna Beach, CA 92651, US. Igor, VE3ZF, Ken, VE3FDX, Bill, K5YG, Travis, W5GED, John, VA2MCJ and Eugene, N2AA, will be active from Orleans Island (NA-128) on 18 to 21 October. They will be signing VE3ZF/2 CW and SSB and W5GED/VE2 RTTY and PSK, while during the W/VE Islands QSO Party 20 to 21 October the callsign will be VE2IDX. QSL VE2IDX via VE3ZF, others via home call. Haru, JA1XGI, will be active as VK9GLX from Lord Howe Island (OC-004) on 19 to 22 October. He plans to operate CW, SSB and digital modes on 40, 30 and 20 metres. QSL via JA1XGI, direct or bureau or W8XGI direct only. Christoph, DK2CRN, (VK2AM) and George, DL1ECG, (VK2ALU) will be active from Australia until 27 October. QSL via home calls, direct or bureau. Now the contest news The RSGB 50MHz Contest takes place on 14 October from 0900 to 1200 on all modes. The exchange takes the form of RST, serial number, locator and postcode. The RSGB 1.3 and 2.3GHz Activity takes place on 16 October from 2000 to 2230 on all modes. The exchange takes the form of RST, serial number and locator. The JARTS WW RTTY Contest takes place from 0000 on 20 October to 2359 on 21 October, on 3.5 and 28MHz bands, RTTY mode. The exchange takes the form of RST and age of operator. The Worked All Germany Contest takes place from 1500 on 20 October to 1459 on 21 October, on 3.5 to 28MHz bands, on CW and SSB. The exchange takes the form of RST and serial number. Now the solar factual data for the period from 1 October to 7 October, compiled by Neil Clarke, G0CAS For another week solar activity was once again very low. Like last week another small sunspot group appeared but nothing came of it. Solar flux levels varied little day to day and averaged 68 units. The 90 day solar flux on the 7th was 69 units, that's the same level as last week. X-ray flux levels remained yet again remained below the minimum level. Geomagnetic activity started at quiet levels but on the 3rd a coronal hole disturbance arrived and lasted through to the 4th. The 3rd was the most disturbed day with an Ap index of 18units. The rest of the period the geomagnetic field was quiet and the average was Ap 8 units. The ACE spacecraft saw solar wind speeds increase from 400 kilometres per second on the 2nd to 600 by the 4th. Particle densities were low throughout. Bz varied between minus 3 and plus 2 nanoTeslas on the quiet days and between minus 7 and plus 8 nanoTeslas during the disturbance. The increase in geomagnetic levels was enough to take the edge off HF propagation but not sufficiently for aurora at VHF. However, although there were very few signals on 28MHz, there were

occasional openings to Africa on 21 and 24MHz and to the Pacific and the Far East on 14MHz. Australia and New Zealand were

4 again workable on the lower bands by well-equipped stations around about 0600 to 0700UTC. And finally the solar forecast. This week solar activity is expected to continue at very low levels with no sign of an end to the present period of inactivity. When activity does increase it will happen without any warning and is almost impossible to forecast. Solar flux levels should be in the high 60's all week. Geomagnetic activity is expected to be quiet until around Wednesday when a coronal hole disturbance should arrive. Even though the disturbance is not expected to be strong, it should last until the weekend. MUFs during daylight hours at equal latitudes should be around 19MHz for the south and 16MHz for the north. The darkness hour lows should be about 8MHz. Levels could be slightly lower during the second half of the week. Paths this week to Japan should have a maximum usable frequency with a 50 per cent success rate of about 18MHz. The optimum working frequency with a 90 per cent success rate will be around 14MHz. The best time to try this path will be between 0800 and 1100 hours UTC. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 14 October Southdown Amateur Radio Society is operating at the Beachy Head Site. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Monday 15 October Burnham Beeches Radio Club is having a talk on test equipment for the amateur. Contact G4XDU, on 01628625720.

On Monday 15 October Surrey Radio Contact Club is having its Fix-It, advice, Chin Wag, Move-It-On evening. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 16 October Maidenhead and District Amateur Radio Club is having a club night. Contact John, G8RYW, on 01628 628 463, or by email to g8ryw@tesco.net.

On Tuesday 16 October Stevenage and District Amateur Radio Society is having a software defined radio demo. Contact Neil, M0ARH, on 01438 217 077.

On Tuesday 16 October Verulam Radio Club is watching the video of the 3YOX DXpedition. Contact Norman, G8ATO, on 07773 628 912.

On Wednesday 17 October Chesham and District Amateur Radio Society is having a 2m pedestrian portable perambulation with cryptic clues set by G3XZG. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 17 October Dover Radio Club is having an operating night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 17 October Fareham and District Amateur Radio Club is having a final planning session for JOTA. Contact Ken, M0KLS, on 02392 797 240.

On Wednesday 17 October Havering and District Amateur Radio Club is having a review of 2007 event pictures with Dave, M0TAZ. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 17 October Norfolk Amateur Radio Club is having an informal evening. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 17 October Southdown Amateur Radio Society is operating at the Halisham shack. Contact John, G3DQY, on 01424,424,319, or by email to vaughdqy@aol.com.

On Thursday 18 October Colchester Radio Amateurs is having a meeting at St Helena School. Contact Kevan 2E0WMG at colchesterradioamateurs@hotmail.co.uk or on 07766543784.

On Thursday 18 October Cray Valley Radio Society is having a visit to the vintage Wireless Museum with G0UKN. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 18 October Shefford and District Amateur Radio Society is having its autumn junk sale. Contact David, G8UOD, on 01234 742 757.

6 On Thursday 18 October Sutton and Cheam Radio Society is having a talk on radio astronomy by Evan Duffield, M3TJU. Contact John, G0BWV, on 020 8644 9945, or by email to info@scrs.org.uk.

On Friday 19 October Cambridge and District Amateur Radio Club is having part 2 of the aerial extravaganza by Mike, G8VCN. Contact David, G8JKV.

On Friday 19 October Mid-Sussex Amateur Radio Society is having its AGM and wine and cheese evening. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 19 October Wey Valley Amateur Radio Group is taking a light hearted look at early electrics with Stan Casperd, G3XON. Details on the web at www.weyvalleyarg.org.uk.

On Saturday 20 October Fareham and District Amateur Radio Club is operating its JOTA station at Fort Widley from 10am. Operations will be

on 2m, HF, SSB and, if facilities permit, on Echolink and slow scan TV. Contact Ken, M0KLS, on 02392 797 240.

On Sunday 21 October Itchen Valley Amateur Radio Club is taking part in JOTA with Liz, M0ACL. Contact Liz, M0ACL, on 02380 254599.

NEWS FOR THE SOUTH-WEST On Monday 15 October Appledore and District Amateur Radio Club is having a radio quiz set by Dave, G0GPK. Contact Beryl, G1SVP.

On Monday 15 October Wyke Regis Training Centre is commencing its last Foundation Course of the year. The course will run from 6.30pm till 8.30pm for 4 to 5 Monday evenings. Contact Neville, M5NEV, by email to m5nev@wykeradio.org.

A new radio club is being proposed for Bath and surrounding areas. On Wednesday 17 October there will be a meeting for all interested parties to discuss the proposals for Bath Amateur Radio Club. All amateurs from the area are encouraged to participate. For more information please contact Rob on 01225 351 016 or by email to robpegs@hotmail.com.

On Wednesday 17 October Exmouth Amateur Radio Club is having an operating night. Contact g0uil@eclipse.co.uk.

On Wednesday 17 October South Bristol Amateur Radio Club is discussing club events and contest planning for 2008. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 17 October Taunton and District Amateur Radio Club is preparing for JOTA. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 17 October Thornbury and South Gloucestershire Amateur Radio Club is having a video night. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 18 October Swindon and District Amateur Radio Club is having a talk on the Somerset range of kits by Tim Walford, G3PCJ. Contact Mike, M5CBS, on 01793 826 465.

On Thursday 18 October Yeovil Amateur Radio Club is having a talk on vintage broadcast receivers by M0WOB. Contact Gary, 2E0BFJ, by email to g.swain@tesco.net.

On Friday 19 October Bournemouth Radio Society is having its AGM. Contact John, G0HAT, on 07719 700 771.

On Sunday 21 October Taunton and District Amateur Radio Club is taking part in JOTA from Huish Wood, operating as GB0THW. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

7

NEWS FOR THE MIDLANDS On Monday 15 October Gloucester Amateur Radio and Electronics Society is having a mini DF Hunt. Contact Anne, 2E1GKY, on

01452 548478, daytime.

On Tuesday 16 October Derby and District Amateur Radio Society is having an illustrated talk by Keith, G3TTC, on broadcast transmitting aerials. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 16 October Loughborough and District Amateur Radio Club is on the air. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 16 October Wythall Radio Club is having its AGM. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 17 October Telford and District Amateur Radio Society is having a nostalgia night, where members are invited to bring something old and interesting. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 18 October Salop Amateur Radio Society is having its pre AGM discussion. Contact Glenda, G1YJB, on 01939 235 412.

On Thursday 18 October Solihull Amateur Radio Society is having its AGM at the Shirley Centre, 274 Stratford Road. Contact Paul, G8AYY, on 0121 783 2996.

On Friday 19 October Hucknall Rolls-Royce Amateur Radio Club is having a 2 meter VHF mobile fox hunt. Details on the web at www.hrrarc.com.

NEWS FOR THE NORTH OF ENGLAND

On Sunday 14 October Great Lumley Amateur Radio And Electronics Society is holding its rally at the Great Lumley Community Centre, Front Street, Great Lumley, near Chester Le Street, County Durham. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Monday 15 October Sheffield Amateur Radio Club is having a talk by G3VOT on antennas for new people. Contact Trevor, M0TWS.

On Monday 15 October Thornton Cleveleys Amateur Radio Society is having its AGM. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 16 October Chester and District Radio Society is having a talk on tunnel communications by Eric Walton and Jock McEwan. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Tuesday 16 October Pontefract District Amateur Radio Society is having a construction evening, making low pass filters for HF transmitters. A PCB and kit of parts will be provided. Contact Colin, G0NQE, on 01977 677 006, info@pontefractradioclub.org.

On Tuesday 16 October Stockport Radio Society is having a surplus equipment review evening. Contact David, M1ANT, on 0161 456 7832.

On Wednesday 17 October Denby Dale Amateur Radio Society is having its AGM. Contact David, G6OCD, on 0700 5947317, or by email to david.g6ocd@ntlworld.com.

On Wednesday 17 October Great Lumley Amateur Radio and Electronics Society is holding a post mortem on the rally. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

8 On Thursday 18 October Grimsby Amateur Radio Society is having its annual junk sale. Contact Brian, G4DXB, on 01472 231 383.

On Thursday 18 October Wakefield and District Amateur Radio Society is on the air. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Friday 19 October South Manchester Radio and Computer Club is having a video show "The Spitfire Fighter". Contact Ron, on 0161 969 3999.

On Friday 19 October Tynemouth Radio Club is having a virtual Morse and JOTA briefing by Glen G0SBN. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 20 October Tynemouth Radio Club is taking part in Jamboree on the air with Tynemouth Scouts. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 20 October Wakefield and District Amateur Radio Society is taking part in Jamboree on the air with the Wakefield 23rd Scout Group. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

NEWS FOR SCOTLAND

On Wednesday 17 October Paisley (YMCA) Amateur Radio Club is having a demonstration of how to operate the shack radio gear. Contact Jim, GM3UWX.

On Thursday 18 October Aberdeen Amateur Radio Society is having mini talks. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Friday 19 October Cockenzie and Port Seton Amateur Radio Club is having a video night. Contact Bob, GM4UYZ, on 01875 811 723.

On Friday 19 October West Of Scotland Amateur Radio Society is having its technical forum. Details on the web at www.wosars.org.

On Saturday 20 October Moray Firth Amateur Radio Society is taking part in JOTA from Fochabers. Contact Jim, MM0SMD, on 01340 820 134.

NEWS FOR WALES On Tuesday 16 October Carmarthen Amateur Radio Society is having a talk on air traffic engineering. Contact Les, GW8PSJ, on 01239 811 922.

NEWS FOR NORTHERN IRELAND

On Saturday 20 October Bangor and District Amateur Radio Club is taking part in Jamboree on the air. Contact Mike, GI4XSF, on 028 4277 2 383.

And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

"Steve Bonine" wrote

> I was also first licensed in 1963 and I think I had three crystals, but
> one was 3706. That must have been a common frequency for a surplus xtal.

Gosh, Steve - I wonder if we worked each other. My antenna was so poor that, when I used an EICO VFO as a transmitter hooked up to a 100 ft random receiving antenna (with no matching system whatsoever) -- the EICO did better! With it, I worked 14 states including Oklahoma (from the NYC area). (Then I got an "OO" card in the mail, chastising me for using a VFO as a novice. I guess "OO" stands for "OH-OH!")

The Johnson Challenger was, on 80m, hooked up to a 40m vertical dipole hanging from the roof ledge of an 8 story apartment roof. Yep, it was right up against the brick wall. I was on the 5th floor. What a moron... ;-) See, I couldn't find any 40m crystals, so I got one for 80, and.... But that Challenger could actually load a 40m antenna on 80.

Thus the license class "novice."

Howard

Some stories from those days:

My first rig was a single 6V6GT in the grid-plate circuit, running maybe 10 W with one xtal on 3726 kHz. Dummy load was a Christmas tree bulb, the big 7-1/2 watt kind. Antenna was a wire out to the crabapple tree. Ground was the radiator pipe. J-37 key and knife-switch TR. Antenna-current indicator was a pilot lamp in series with the lead-in.

But the power supply was from an old Philco TV. Big power transformer, 5U4, cap and chokes. Good for at least 400 mills and I wasn't drawing even 40.

Only parts bought new were the knife switch, the xtal and the 6V6GT. Everything else was scavenged from the trash or acquired second hand.

Still have the key and the 6V6GT.

Another mentioned the cost of exams and nervousness at the FCC office. I was lucky in that the FCC office was just a subway ride away. But a school kid had to wait for summer or the rare school holiday that wasn't a Federal holiday, because FCC exams were only given Monday through Wednesday mornings. And the $9 cost was a big deal, too.

The first time I went for the General, early summer 1968, I flunked the code because the examiner couldn't read my "Palmer Method" longhand well enough to find the required 65 consecutive correct characters. But he did find 25, so he let me take the written exam and I wound up with a simultaneous Novice/Tech, which was OK back then. WN3 call on HF and WA3 on VHF.

So I went home and taught myself to block-print, and listened to W1AW until I could copy the 18 wpm bulletins solid from one end to the other. Also saved up every spare penny to get the $9 exam fee. Went back to FCC in midsummer and passed 13 wpm no problem.

As I was about to leave, the FCC examiner said "why don't you try Advanced while you're here?" Though I hadn't prepared for it, there was no way a 14 year old kid would say no to The Man From FCC, so I tried it - and passed.

Two years later I was back for the Extra. But that's another story..

Tomorrow it will be 40 years since the license arrived in the mail...

That white shirt and tie was pretty intimidating, wasn't it? I think it was in 1968 that I went to the NYC office for my Advanced. I knew I failed... but the man in the white shirt went over my answer sheet and casually said, "You passed." "I DID!?" was my trembling response.... "Yeah." Oh. I walked out of the exam room, went down the hall, threw my pencil in the air over my back and kept going.

Now exams are given in people's living rooms....

> Tomorrow it will be 40 years since the license arrived in the mail...

Congratulations, Jim. It's quite a "club" we belong to.

> That white shirt and tie was pretty intimidating, wasn't it?

One of the most rewarding experiences of my ham radio career was serving as reader for a blind ham who was taking her Extra exam in Chicago, just before the FCC stopped administering them. She wanted to take the exam from the FCC. She passed. I felt a tiny part of her pride.

I suppose that the VE system is a positive and reasonable step for the hobby. It sure is easier to convince class attendees to come to a VE session than to travel to the nearest FCC examination location, so it's obvious that we get more new hams with the VE system than having the FCC administer the tests. Not to mention all the tax dollars that we're saving. But the new hams are missing a memory that all of us old timers have of being intimidated by the FCC exam process, and that's just a tiny bit sad.

Times change.

On Oct 13, 9:29?pm, "Howard Lester" <heyles...@dakotacom.net> wrote:

> That white shirt and tie was pretty intimidating, wasn't it?

Not at all. Not to me, anyway.

What was intimidating was the fact that the Examiner was The Man From FCC, who had sole power to say "You passed" or "You failed".
And if you failed, it was a 30 day minimum wait until you could try again, plus another $9 fee.

> but the man in the white shirt went over my answer sheet and
> casually said,
> "You passed." "I DID!?" was my trembling response....
> "Yeah." Oh. I
> walked out of the exam room, went down the hall, threw my pencil
> in the air
> over my back and kept going.

I think I had a built-in advantage.

As a kid in school, taking tests was something I was used to, at least weekly. One or two more tests was no big thing in itself.

Once the two-year experience requirement was met, I went for Extra. Late summer 1970, same FCC office, same examiner. I was by far the youngest person in the crowded waiting room that day. When The Man opened the exam room door at 8 AM sharp and asked for anyone taking the Extra, I was the only one trying for it.

He led me to the code test table and proceeded to open a locked filing cabinet and take out the little code machine and the paper tapes it used that contained The Actual Test. Plus 'phones, a legal pad and #2 pencil.

That little code machine used different-sized drive rollers to change speeds, btw, and there was a stack of test tapes for it.

I got the standard instructions: Test is five minutes of code, examiner must find 100 consecutive correct legible characters (which amounts to 1 minute at 20 wpm) to pass, when the code stops put the pencil down immediately or you fail.

Examiner asks if I'm ready, I manage a "yes" and put on the cans. He says "Go!" and starts the machine.

I started right off copying in block letters. The code is loud and clear and machine made, easier than copying off the air. After a bit I

settle down and start to think that it's easy - I'm getting every letter!

I see out of the corner of my eye that The Man is looking out the window, then over at me, Then he comes around and looks over my shoulder as I copy. Bends down to get a better look.

Then he walks around the table and shuts off the machine, even though the code has only been going for less than two minutes.

I look up, startled. I'd heard they always gave you the full five minutes....

"That was easy, huh kid?" asks The Man.

"Uh, yeah..." is all I can manage.

"It should be" says The Man. "That was only 13. Here's 20"

And he swapped drive spindles on the code machine and started it again.

Yes, I passed.

> Now exams are given in people's living rooms....

Nothing new about that. I took the Novice tests in K3NYT's dining room. Spring-summer 1967.

> > Tomorrow it will be 40 years since the license arrived in the
> > mail...

Which makes it today..

> Congratulations, Jim. It's quite a "club" we belong to.

Yup. But consider how few we are.

There were about 250,000 US hams back then. If we lost just 1% of those licensed then per year, only about 167,000 of us are left, out of over 655,000 US hams today.

If we lost 2% per year, only about 111,000 of us are left.

Steve, I think you're right - very right - especially after reading Jim's posting that followed yours. It's an experience that few of us hams share any more.

Shannon Basin Radio Club Sprint Challenge

The Shannon Basin Radio club is again running its annual one-day Open, Fixed, Challenge for EI residents. This challenge is open to all licenced operators and short wave listeners, and will be held on the 4th of November 2007 from 14:00 to 18:00 Hours.

The purpose of the challenge is to encourage radio operators and short wave listeners to be active on the H.F bands. The challenge will have three modes of operation, and the winner in each mode will be awarded with the following.

The Lough Allen Shield will be awarded to the highest score in SSB. The Lough Ree Shield will be awarded to the highest score in CW (A1A). The Lough Derg Shield will be awarded to the highest score for SWL.

The above winners will also receive a personal trophy.

To receive a copy of the rules for the above challenge, please send a stamped address envelope to the contest manager EI6HW, Noel Mulvihill, Hillquarter, Coosan, Athlone, Co Westmeath or e-mail
�nfmulvihill at eircom dot net�.

CQIR

Logs are continuing to roll in from all over the world for the CQIR Contest. If you visit the IRTS web site you will see a list of logs received as well as the number of entries to date in the two prize draws. We will also have shortly on the website, details of the county and date of emigration as sent by the overseas Irish stations, it makes fascinating reading. And just a reminder to all stations who participated to send in their logs by email as soon as possible for inclusion in the results and the draws.

Marconi Clifden Celebrations

On the 17th of October 1907 Guglielmo Marconi sent his first commercial message from the then new station at Clifden, Ireland. This October in celebration of this historic event members of the Galway Radio Experimenters Club is running a special event station until this coming Wednesday the 17th from Clifden. The club has been issued the call sign EI100MFT for the event, MFT been the last call sign used on the original station.

On Wednesday they will be making a special linkup with the Marconi sister station in Glace Bay, Nova Scotia. Part of this linkup will be an exchange of greetings between President Mary McAleese and Lieutenant Governor of Nova Scotia the Honourable Mayann E. Francis. The group will also be honoured to have Princess Electra Marconi present as she is coming to Clifden for the festival along with an Exhibit from the Marconi Foundation in Bologna. The Galway Radio Experimenters Club will also be presenting a display of vintage equipment. More details on the festival can be found at www.clifden.ie. Visitors to the station are more than welcome and if you would like to participate this can also be arranged. For further information please contact Enda Broderick (II2II) on 086-8676410 or email: ﷺenda dot Broderick at lightnet dot ieﷺ.

Waterford Rally

The Waterford Radio and Electronics Rally will take place next Sunday the 21st of October at the Woodlands Hotel on the Dunmore Road in Waterford. South East Communications and Long Communications will be at the rally. The IRTS, AREN and a bring-and-buy stand will also feature.

Doors open at 11 a.m. and admission is 5 Euro, accompanied children are admitted free of charge. For details including a directions map, visit the South Eastern Amateur Radio Group web site on www.searg.com.

Upcoming Rallies

The Foyle and District Rally will take place on Sunday the 4th of November 2007 at the White Horse Hotel, Derry. For more information visit www.mn0aku.org.uk.

The Mayo Radio Rally will take place on Sunday the 18th of November in the Belmount Hotel, Knock, Co. Mayo. For more information contact Padraic Baynes, EI9JA @ QTHR.

South Dublin Radio Club

This year's South Dublin Radio Club Christmas Party will take place on Tuesday the 11th of December. After last year's success, the venue will remain the same; "The Morgue", Tempelogue from 8.00 p.m. until late.

Members of other clubs and visitors are very welcome to this social event. It's always a great turnout. Limited free food will be available for paid up members while visitors can choose from the bar menu up to 9.00 p.m.

The club will then go on Christmas holidays until the return on the 8th of January

---

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to "news at irts dot ie" for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday's bulletin.

Only licensed 30 years ago, but took the exam before the steely-eyed FCC examiner at BATTERY Street in San Francisco. Back then, it was a lot tougher to get a Ham License than it was to join the US Navy hi hi. A memorable life experience. And the several week wait for the ticket in the mail was unforgettable as well.

Lamont Callsign withheld in the swampy waters of the news groups (;-)

> administer the tests.

I don't think it's obvious at all. Look at the growth in US amateur
radio over the decades, and the VE system by itself didn't really make
a noticeable difference in the number of new hams.

Remember too that in the mid-to-late 1970s the FCC offered
hams two test options:

1) Travel to an FCC exam point

2) Get a certain minimum number of people lined up for the
test, and FCC would send an examiner

Most hamfests above a certain size had FCC exam sessions
in that time period. Clubs and classes would have periodic exams, too.
All free.

> Not to mention all the tax dollars that we're
> saving.

That is the only reason we have the VE system, IMHO.
The FCC got unpaid volunteers to do almost all the work of test
preparation and administration, instead of paying federal
employees to do it.

> But the new hams are missing a memory that all of us old timers
> have of being intimidated by the FCC exam process, and that's
> just a tiny bit sad.

Given the choice, I'd rather have the tests be really good ones
that are readily accessible, with as little intimidation as possible.

I think the main effect the old system had on me (and probably many
others) was that, since it was somewhat difficult/expensive
to get to an FCC exam session, and the results of failure could be
rather dire, we tended to be way overprepared for the exams, and

surprised that they weren't as tough as we'd feared once we actually got to them.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation | decisions in the newsgroup itself are also not permitted, as stated in | our original newsgroup charter. Please direct any such critical | feedback to our administrative contact address at the bottom of this | article, where it will be carefully considered by an appeals team of | moderators. This team is distinct from the initial team of moderators | that approves or disapproves article submissions, and thus can provide | independent oversight of moderation decisions. |

Similarly, if you see an obviously inappropriate article in our | newsgroup, please assume that it was a mistake or a direct forgery. The | moderation team makes every effort to protect the newsgroup from such | incidents, but they do happen, albeit rarely. You may also submit | feedback to the same address regarding such articles in our newsgroup, | but it is likely that our monitoring software and procedures have | already detected it, and we are actively handling the problem. Please | resist "piling on" with followups to the newsgroup when these incidents | occur, so that we don't have to reject such articles. |

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

1690. ARS License Numbers September 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-10-15 12:30:23 UTC
From: N2EY@AOL.COM
Message-ID: <1192449078.612159.116380@e34g2000pro.googlegroups.com>
Source record: 3795

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of September 4, 2007:

Novice - 21,341 (3.3%)
Technician - 289,021 (44.1%)
Technician Plus - 24,602 (3.8%)
General - 142,286 (21.7%)
Advanced - 66,923 (10.2%)
Extra - 111,413 (17.0%)

Total Tech/TechPlus - 313,623 (47.8%)

Total all classes - 655,586

As of September 15, 2007:

Novice - 21,254 (3.2%)
Technician - 289,491 (44.1%)
Technician Plus - 24,255 (3.7%)
General - 142,395 (21.7%)
Advanced - 66,841 (10.2%)
Extra - 111,477 (17.0%)

Total Tech/TechPlus - 313,746 (47.8%)

Total all classes - 655,713

As of September 23, 2007:

Novice - 21,182 (3.2%)
Technician - 289,750 (44.2%)
Technician Plus - 24,006 (3.7%)
General - 142,426 (21.7%)
Advanced - 66,681 (10.2%)
Extra - 111,522 (17.0%)

Total Tech/TechPlus - 313,756 (47.9%)

Total all classes - 655,567

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433

This is WIANEWS for week commencing 14th October 2007

Welcome to WIA National News for week commencing 14th October 2007,
I'm Grant VK3VIM sitting in for a cruising Graham.

Lots to report this week and also a special weird and wonderful from the podcasters podcaster Leo Lapotre on HP's model 35 Calculator.

Let's move on and into National News... with Robert Broomhead VK3KRB.

As we take up the news this week Dianne Ashton and husband Phil are into their second week of two weeks of some well earned Holidays. Whilst Dianne is away.. back in the office Margaret and the team are doing marvelous job of keeping everything up to date. However with one person away there is the possibility that there may be of a few delays in responding to some requests and certain examination matters so we do appreciate your patience and understanding.

WRC - 07 Starts on 22 October

The ITU's World Radio communication Conference 2007 (WRC-07) will commence in Geneva, Switzerland on 22 October and run until 16 November.

Keith Malcolm VK1ZKM will be leaving for Geneva next week. Keith will be a member of the Australian delegation to the WRC, nominated by the WIA and representing the amateur services. Keith's travel and other costs are being met by the WIA.

There are 3 items of particular interest to amateurs raised by the agenda for the WRC.

One is an agenda item that would allow the allocation of the band 7.2 to 7.3 MHz in Regions 1 and 3 to the amateur service, achieving a world wide 7 to 7.3 MHz band. However, Keith advises that he is unaware of any proposal supporting this, and the Australian public position is to oppose any change in this part of the spectrum.
Of course, this is unlikely to result in any change for Australian amateurs around 7 MHz.

Another matter is the proposal for an allocation to the amateur service of the band 5.260 to 5.410 MHz. The Region 1 organisation, CEPT, has proposed a footnote to allow administrations to make such an allocation, and other administration's proposals make it likely that the proposal will at least be discussed.

The final proposal for a secondary allocation for the amateur service 135.7 to 137.8 kHz with a 1 Watt e.i.r.p. power limit does seem to have

fairly general support.

"We are lucky to be represented by such an experienced and qualified person, and I am sure that Keith has the support and best wishes of all Australi an amateurs" said WIA President, Michael Owen VK3KI.

Keith will be reporting regularly to the WIA, and the WIA will be passing on as much information as possible about this important conference.

"Its Call book time again!"

If you want to find another Australian amateur, you need a call book. If you want to check a repeater frequency or band plan, you need a Call book.

But this years call book is special it's the special collectors edition with the Parkes radio telescope and group photo on the cover, the picture taken during the WIA 2007 AGM weekend and of course it has all of the regular information and more.

Where do you get it?

Members and non members can get it from the WIA office but you might want to support your club and buy from there. Last week all clubs should have received an order form and price details from Ted VK2ARA.

If you order a box of 24, they will be sent post free. If 24 is too many, contact another club and share. Compare the club price with the office price. You can make up to 50% profit for your club.

The Call books will be available from 17 October, so get those orders in to the office. Call books will be dispatched as soon as paid orders are received

Dstar news

Since last weeks broadcast over 50 people have joined the Dstar email list which is being moderated by the Dstar National Technical Coordinator Richard Hoskins VK3JFK.

This list has been set up to provide assistance, information and news to amateurs about the Australian D-Star scene.

It is hoped that we can all assist each other in learning and having fun with D-Star. No question on the topic should be considered dumb as I'm sure that there are other people on the list wanting to know the same informatio n.

Flaming will not be tolerated. We are here for enjoyment and to learn not to be ridiculed.

Over time a set of D-Star Operational Guidelines will be developed similar to the Voice & IRLP Repeater Guidelines to encourage the best

consistent use of the D-Star systems.

The Australia D-Star web site is under construction. It will contain information on the basic operations of D-Star, radio configurations, operating frequencies of D-Star repeater systems and Gateways as well as links to other useful D-Star information. We have permission from ICOM America and ICOM Australia to use some of their material if required. The web site can be found at www.dstar.org.au

D-Star is a new system for all of us here in Australia and we all will have experiment and lot to learn so lets make it fun.

Thanks Robert and as Dstar roles out in VK3, Jim Linton reminds us that Dstar has been in VK8 for almost a year now!

Moving along with HAMS ACROSS AUSTRALIA

VK1

This weekend sees ACT WICEN at the Corsa de Mille Pini - course of a million pines 2 day car rally. Keeping WICEN busy again is the Brindabella Classic Run on the 21st and Fit's Challenge Bike Ride on the 28th. Great to see WICEN out and about providing a valuable community service.

The club monthly general meeting at Farrer on the 22nd sees Phil Gimshaw VK4KVK talking on HF antennas and "other things".

VK2

Did you know about the morse code transmissions from VK2WI? The transmissions are continuous on 3699KHz except during these Sunday broadcast periods.

This coming Thursday, the 18th. October 2007, the Central Coast Amateur Radio Club will be 50 years old, 37 people attended the 1st meeting in the Gosford School of Arts Hall now part of the Gosford Public School. We (?) are organising a dinner with a very good speaker at the Wyong Race Course for Saturday, 16th February 2008. To book seats and further info contact Ray VK2 HAY on (02) 43 25 21 82.

VK3

WICEN VK3 have several events coming up. Saturday and Sunday the 24th and 25th November is a Car Rally in Gippsland with 2 metres, 70cm and packet radio being used.

A big event for WICEN is the Red Cross Murray River Marathon from the 26th - 31st December just after Christmas. For further details contact John Weir VK3ZRV on 9431 0667.

--

I'm Lia VK3FLIA and I'm here to tell you about F-Troop. F-Troop is held on the VK3RMM repeater after the news broadcast on Sunday mornings commencing at about 11.05am.

The purpose of F-Troop is to help and encourage new licensees to become familiar with radio operating techniques. It is run by experienced Amateur Radio Victoria operators, so why not join us after today's broadcast.

I'm Lia VK3FLIA and you are listening to VK1WIA

VK4

December 8th and the VK4 ALARA get-together. It's being held at the Gold Coast Amateur Radio Societies clubrooms. Starting at 3:30pm, it's a Christmas spit roast buffet and all for $23:50 each. Contact Pam to organise tickets on 02 6676 6595.

I hear Graham VK4BB met up with Pam at the Queensland Club Presidents Lunch in Brisbane where Michael Owen VK3KI spoke just yesterday. Pam told Graham ALARA and the Gold Coast Amateur Radio Society are looking forward to as many visitors and members as possible December 8.

VK7

VK7's big day out. A quick reminder to get yourself to VK7's BIG DAY OUT namely the Sewing Circle BBQ on the 4th of November.

It is at the home of Ken VK7DY and Wendy VK7FWJS at Orielton - 30 kms east of Hobart.

There will be much to see and do including: show & tell, homebrew contests trading table, many demonstrations of radio modes, Satellite TV, amateur television and antenna rising.

There will be the home brew awards and the Terry Wilson VK7HTW (silent key) award for services to Amateur Radio for 2007 and the presentation of the Sewing Machine Award to the operator most worthy of this Annual Award.

Go along, meet new friends and renew old friendships take the partner and family.

VK8

The VK8ZMA EchoIRLP node in Katherine NT has changed frequency to 147.800MHz simplex. This was changed to eliminate interference to the new APRS Satgate Mike runs on 145.825MHz.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6MRS

HAM COLLEGE - setting the bar for Amateur Education.

Since the inception of Ham College in WA as an entity, in Jan 2007, they have conducted 5 foundation courses averaging eight candidates each. One

standard course, with seven attendees and an advanced course currently running with nine persons attending. The college has conducted eighty one written exams consisting of forty foundation assessments; 23 Standard theory; 6 advanced theory and 12 regulations and forty five practical assessments. The pass rates have been Foundation 87.5% (5 NYC); Standard 81% (7 NYC); Advanced 70% (3 NYC) and regs 100%.

Only three candidates at standard level have not been upgrades.

It is worth noting that only one NYC had completed an Ham College Course and the youngest foundation candidate was at the time aged nine.

The present intention for next year is to continue the foundation courses every two months and an examination/assessment day every month. The Standard and Advanced courses will be run again as they have this year with the Standard from Feb to July and the Advanced July through to Dec. Several people have expressed interest in learning morse and this will be followed up with a view to running a morse course commencing early next year.

Over the last six months two people, John 6ATU and Duncan 6MHZ, have attended several foundation courses in an assistant trainer capacity. Both John and Duncan have fulfilled the requirements in the college instructor training policy and are now qualified as Foundation Course Instructors for Ham College.

In addition to these existing courses Ham College will endeavour to introduce several new initiatives. Three or four practical weekends with a view to encouraging the 'home brew project' side of our hobby. A series of lectures for experienced amateurs similar to those that used to be held by the WIA VK6 Division. Both of these are in the planning phase.

In the longer term it is intended to open discussions with the Education Dept to introduce our hobby into schools.

So there is a bit of news from the West.

If you are interested in attending Ham College to obtain or upgrade your licence or you would like to sign up for next years morse course. Please contact me Kylea on 0412 704226.

SOUTH AFRICA: RTA PRESENTATIONS NOW AVAILABLE ON THE WEB

The first of the presentations made at the South African Radio League's Radio Technology in Action days are now available on the web. The Presentations are in PDF format and can be downloaded for printing or viewing on screen.

The URL is www.sarl.org.za, click on activity and then on RTA.

The South African Radio League also invites everyone to visit the RTA Section of the web regularly as presentations will be added over the next few weeks.

Alan VK4YAR reminds us that the Wireless Institute of Australia's Foundation Licence Manual is a full colour manual consisting of 95 pages of information for those studying, or those who would just like a reference book for foundation Licence Operators.

The manual contains the all relevant information you will need to know To successfully complete a training course to obtain our foundation licence.

It also contains a wealth of information a Foundation Licence operator Will need. Items like Band Plans, Electrical Safety information, operating procedures such as the Q code, how to contact you local radio club, the WIA and much more.

For more information on obtaining the foundation licence manual please visit wia.org.au

Bob Bristow, VK6POP the JOTA-JOTI Coordinator Scouts Australia says JOTA Or "The Jamboree On The Air," is on again, for the 50th time, next weekend, 19th-21st of October. Around 500,000 scouts around the world take part in this, the largest annual Scout event. This year, being the 50th JOTA, the event begins at 2200 Friday, local time, to match the 50th Anniversary theme "around the world in 50 hours"

The Jamboree on the Air began as an amateur radio station at the World Scout Jamboree at Sutton Coldfield in 1957, marking the 50th anniversary of Scouting. The amateur radio activity was a success and Jamboree on the Air began as a separate event in 1958.

In 1996, Scouts who had been contacting each other over the Internet, decided that a Jamboree on the Internet (JOTI) would be a good idea. It was a good idea. In Australia alone, over 10,000 unique connections are made to the ScoutLink chat servers.

These days, of course, with the introduction of computers and the internet into Amateur Radio, the demarcation between JOTA and JOTI has become a little blurred. This doesn't matter, however, because the basic aim of the JOTA-JOTI weekend is for Scouts to make contact with Scouts all over the world.

For 50 years now, JOTA has been supported by Amateur Radio groups and individual s who give their time and often donate the use of their own equipment. These people have had a great effect on the young people they have introduced to the hobby of Amateur Radio.

Sometimes, when surfing the internet for something to do with Amateur Radio, or looking up someone on QRZ.com, I read someone's bio, and Sure enough, so many of them were not only Scouts, but became interested in the hobby through Scouts and Jamboree On The Air.

The 2008 JOTA-JOTI looks like being one of the biggest. There is a lot of interest around, partly fed by the activities of the World Centenary of Scouting and the very successful ARISS contact at the Australian Jamboree in January, and partly due to the work put in by Scout Leaders

and Radio Amateurs in promoting the hobby and making it relevant to Scouts of today.

In 2008, we have the Centenary of Scouting in Australia. The Prime Minister has declared 2008 The Year Of The Scout. It's my desire to make Amateur Radio activities very much a part of those celebrations, and JOTA-JOTI bigger and better.

With International News, I'm Rob VK5MM

A couple of cyber hams. Linking amateur radio into new technologies has been much talked about. Social sites such as YouTube and the Wordpress blogging platform allow even the most modest ham to videoblog and blog till their hearts content and two US hams are great adapters of these technologies. Randy K7AGE in Grass Valley California is a prolific video blogger on YouTube. Posting 33 videos to date on a variety of amateur radio topics with 471 subscribers and thousands of views.

Whilst over in the written land of blogging, Jeff Davis KE9V maintains a thoughtful blog on amateur radio with postings almost daily. Jeff also produces a great podcast called Long Delayed Echos which Jeff describes as "an audio program for ham radio enthusiasts". In the current editions the theme is 'Explorer Series' with the latest edition the 1931 Wilkins-Ellsworth TransArctic Submarine Expedition.

DARC OFFERS ASSISTANCE TO GERMAN AUTHORITIES

The Deutscher Amateur Radio Club has sent a letter to the German Federal Office of Civil Protection and Disaster Assistance. This to offer Amateur Radio assistance in cases of emergency.

In a letter signed by president Jochen Hindruchs, DL9KCX, the German national society underlines the fact that Amateur Radio stations are technically independent and that the Deutscher Amateur Radio Club structure with districts and local clubs fits the communications needs of the regional authorities.

JAPAN HAS SURGE IN NEW HAMS

News from the Japan Amateur Radio League is that in the 12 months to March 2007 the number of newly qualified amateur operator licensees has steeply increased when compared with the same period in the previous year.

Breaking it down, the 1st class licence recorded a four-fold increase in new licences and the 2nd class had an amazing 18-times increase. There were also more new hams taking up Japan's 3rd and 4th class licences too.

The JARL puts this higher interest in amateur radio, at least in part, to the revision of Japan's national radio regulations based on the World Recommunications Conference 2003 decision to end the mandatory requirement for Morse code tests.

(IARU R3 News/Jim Linton VK3PC)

DELFI C2 SAT LAUNCH DELAYED

The launch of Delfi-C3 satellite has been moved to December. Once on-orbir, Delfi-C3 will also have a linear transponder with a passband uplink: from 435.570 to 435.530 MHz and an inverting downlink from 145.880 to 145.920 MHz. The bird will also carry a telemetry downlink in the amateur satellite segment of the 2 meter band. The primary telemetry downlink will be on 145.870 MHz running BPSK in AX.25 protocol at 1200 Baud.

There are two major reasons for the postponement of the launch. These Are weather and the Indian launch schedule. The typhoon season in India lasts from mid-October until December. The launch schedule is dependent on mission priorities.

SEANET 2007 - REMINDER

The 35th Southeast Asia Net (SEANET) convention will take place in the Northern Thai town of Lampang from November 8-11, 2007, hosted by the Radio Amateur Society of Thailand under the Royal Patronage of His Majesty the King
(RAST).

Full details of the programme can be found at the SEANET 2007 website with details of the programme and an online registration form at http://www.sabah.net.my/seanet/seanet_2007.htm

RADIO RULES: NEW US 500 KHZ LICENSE

Richard Dillman from the Maritime Radio Historical Society reports a new United States class 1A common carrier Morse code coast station has been licensed by the FCC. Station KDR has been licensed to James A. Dalke in Bellevue, Washington. Dalke is a broadcast engineer who just happens to have a 5kW Medium Frequency transmitter. KDR is licensed for operation on 500Khz and 482KHz at 5 kW. Two people made applications. Dalke's was granted on September 24th.

RADIO ON LINE: BETTER AUDIO WANTED

More and more, the home audio experience is happening via the family computer. This, according to the Consumer Electronics Association which says that almost three quarters of online adults in the United States are using home computers to listen to audio content,.

While most home PC audio users are satisfied with the audio experience, more than a third want better sound quality. When forced to choose between having a quality audio experience and owning a large number of audio files, almost half of home PC audio users chose quality over quantity the research stated.

MEDIA WATCH

HAM RADIO PROMOTION: MGM FILM PRESENTS RADIO HAMS

A film from Metro Goldwayn Mayer that promotes Amateur Radio has surfaced On the Internet. Produced in 1939 by Pete Smith, "Radio Hams centres on a family called to dinner. All but the teenage son respond. When family members go looking for him, one by one they are snared into a world of ham radio high adventure. One that includes a rescue in Alaska and a tragic search for a downed aircraft at sea.

Unlike most films promoting ham radio, this one is not a documentary. It's a fully scripted 10 minute dramatic presentation featuring a cast of professional actors well directed by Felix Fiest. E. Mauriece Adler is credited with writing the screen play.

"Radio Hams" is really a nostalgic look back at ham radio the way it never was.

WEIRD N WONDERFUL

In 1972, HP introduced the first scientific calculator, the HP35, lets catch up with tech journalist Leo Laporte and Dick DeBartolo as they discuss "a classic".

A classic indead, and I was only 3 years old! Thanks to Leo's daily wiz gizz report there from the TWIT.TV network.

Well that brings us to the end of WIA national news this week, thanks go to our great broadcast team for their effort this week. On the news desk, from us all at VK1WIA, bye for now.

==========

WIANews - we've reported...YOU decide.

On Oct 12, 1:25?pm, N...@AOL.COM wrote:

> What do others remember?

It's a cool late February weekday in the year 1956. I am 23 and a month out of active US Army duty, having spent the last three Army years in radio communications, I had decided to get a civilian commercial radio operator license two weeks prior. I've done the cram thing on over-drive, practically memorizing all of the looseleaf notebook FCC rules borrowed from a new friend at a broadcast station. I walk several blocks from the train station to the Federal Building in Chicago. I am alone, have never been walking in downtown Chicago before...but I am confident although a bit tired. The train ride was an hour and a half and the flat Illinois prarie boring as usual.

The FCC Field Office is upstairs and I find it. Everything seems to be utilitarian-government. World War II ended 11 years prior and all federal offices look "war surplus" furnished. Three visible officials are brusque, bored, not effusive; i.e., it's like being back in the Army. Familiar. FCC guys are fussing with a paper-tape code machine and one of the three radiotelegraph testees has a problem with connecting his favorite speed key (allowed then). I am going for radiotelephone first class. I fill out a two-page form about myself, then do the first of four written tests, a short one required of everyone then about FCC organization and laws. Code beeps are heard in the background and a telegrapher seems to be mumbling while copying; he is advised to be quiet.

Government-issue tables are too high, government-issue chairs too low. I pass the first test, then everyone is interrupted by loud bell claning outside.It is a fire drill in the Federal Building. FCC agents are not happy. I get a cup of bad coffee from a stand at the main entrance and do the break, waiting and waiting, my mind reviewing what I've memorized in rules and regs. The military had never required licensing and is not accountable to the FCC in radio operation.

Back upstairs again to finish the parts. I have to draw a couple schematics and explain what the parts do on a supplied schematic. One of the tests is multiple-choice. Not a problem, it is something almost

intuitive to me now. Regulations and special law considerations are not. I finish the last part and bring it to the remaining agent's desk...I wonder idly where the other two have gone. He pulls out a template and other test notes from under his desk blotter. Not much "security" there. I stand quietly to one side, sort of in civilian parade rest. After a long time of checking and making a few notes he finally notices another human in the office. The telegrapher testees have finished and are gone. He looks up and says "You passed" in a bored unenthusiastic tone. I say "Thank you" with as much enthusiasm and leave. I know the government drill.

It is now after lunch and the return train won't leave for three hours. What to do? I have a hot dog from a street vendor, good franks in Illinois and Wisconsin, as I know. I idly look in shop windows, pass a movie house in its last week of first-run showing of the film "Oklahoma." It has a matinee. I buy a ticket and watch it from the balcony, the only one up there. At the train station I buy a copy of the Chicago Tribune and pass the return trip time reading of news that don't really affect my life. I have no real emotion about the day. I was confident in passing and did. My mind is at ease. The rest of my life awaits.

Time Machine forward to February 2007 and FCC announcing the fateful decision of No Code Testing for US amateur licenses. I hadn't planned on getting a "ham ticket." I idly check for exam places near me in Los Angeles. ARRLweb lists one on 25 February, a Sunday, at an old firehouse across from a Ralphs supermarket that I've shopped in for over 40 years. I thought the one-engine firehouse had closed down years ago? I say to myself, "Why not?" and call the ARRL VEC team leader listed for other info. I will miss the Fontana, CA, NASCAR race carried on ESPN2 but we have a DVR in the cable company's set-top box. The old one-door firehouse had been replaced for years but is now one of the stations of the Los Angeles Emergency Communications Auxilliary. Nice folks in there, all pleasant and seeming enthusiastic. I wait and wait in a room full of strangers, all younger than myself. Actual testing doesn't begin until an hour and a half after scheduled time. Must be 30 to 35 folks in there by then, most doing just routine administrative things they could have done themselves. Why didn't they, I wonder? No real problem but it delays license testing. The ARRL VEC team leader knows I am

going for Extra but I get the impression he doesn't
think I can do it.

These tests are not even close to the formal testing
I've had in college classrooms. I am retired and my
"job" doesn't depend on passing this test. I will not
cease to exist if I don't pass it. I have prepared for it
and have confidence that I can pass. But...let's GET
ON with it there, people! It's at least a half hour wait
between each test element. I chat idly during
breaks with others. Most seem amazed at what I
am doing. Why, I wonder? I don't look THAT old.
Do they really stand in awe of tests? How did they
get California drivers licenses which also require
multiple-choice testing? Did some fail to graduate
high school?

There are four in this ARRL VEC team. I casually study
them as much as they seem to study me. Interesting
situation. I smile inwardly. The team leader practices
lots of testing security, even to using a small padlocked
test-material box. Every examiner checks everyone's
answers. That's good. That also slows down the
process. I was surprised to see an African-American
on the VEC team. That's a rarity in US amateur radio.

I finish the last test. The VEC leader seems really
surprised. He shakes my hand in congratulations. So
do the other three. Am I the first applicant who got
"Extra out of the box" with this VEC team? I guess so.
One of them mumbled something to that extent. Okay,
another test completed, another in many tests taken
during my life. I leave, walk across the street to get to
my car and drive a mile back to my house. My name
and new callsign (for amateur radio purposes) shows
up on FCC databases for 7 March 2007. I am 74.

Did I get all sorts of emotional goosebumps over that
ham test? No. I had planned to do it, prepared myself,
and felt confident in passing...much the same as I'd
done 51 years prior for my commercial license.
Planning, preparedness, confidence works every time.

73, Len AF6AY

1694. New IARU Region 2 Bandplan

Newsgroup: rec.radio.amateur.moderated
Date: 2007-10-16 13:35:37 UTC
From: N2EY@AOL.COM
Message-ID: <1192533054.392406.255520@e9g2000prf.googlegroups.com>
Source record: 3699

http://www.iaru-regionii.org/Region_2_MF__HF_Bandplan_Annex__1_2008.pdf

This plan is supposed to go into effect Jan 1 2008. It's a voluntary plan, not FCC regulations.

IMHO:

Good Things:

1) The general idea of sorting modes by bandwidth is a valid one. Narrow and wide modes just don't mix well.

2) The plan puts 'robot' (unattended) stations in well-defined places, rather than letting them wander all over the band.

3) There are centres of activity - watering holes - for various activities, like image transmission. This does not mean they can't go on other places, just that there's a defined place to meet.

Bad Things:

4) The plan almost completely bans AM voice! From 160 through 10 meters, AM is only allowed on 3600-3625 kHz, 3875-3900 kHz, and 29000-29300 kHz. On all but 10 metres, AM is an asterisk to the 2700 Hz bandwidth.

5) The plan does not agree with other, similar plans, such as the ARRL bandplan. It seems to me that the IARU Region 2 bandplan and the bandplan of the largest amateur radio organization in Region 2 should at least agree.

The no-AM thing is a big one to me, even though I'm a CW operator. AM is a perfectly legal mode on all US HF/MF amateur bands except 60 and 30 meters, yet the plan says that 'good amateur practice' is to not use AM *anywhere* below 29 MHz except 50 kHz of 80/75 meters. And that's regardless of propagation, number of hams on the band, contests, etc.

This sort of thing sets a very bad precedent. It effectively makes the use of a perfectly legal mode 'bad practice' on all but a small percentage of the available-by-law spectrum, and on all but parts of two bands.

Now some may say "it's just a voluntary bandplan, not a regulation". And that's true, but it's not the whole story.

When interference problems between amateur operations have arisen that do no involve clear Part 97 rules violations, FCC has usually ruled on the side of the amateur operating in accordance with the voluntary bandplan in effect at the time. The most-common example I know are cases where an uncoordinated repeater and a coordinated one have interference issues. AFAIK, the uncoordinated repeater always loses because coordination is good amateur practice. But coordination is really just a form of voluntary bandplan, since we amateurs administer it, not the FCC.

It seems to me that under the IARU plan, if I were to operate AM on, say, 40 metres, and an SSB station were to complain about interference from me, I'd be on the defensive from the getgo because, by definition, the SSB op is operating in accordance with the bandplan and I'm not.

Most of all, if they can do it to AM, they can do it to other modes. Once the precedent is set, it's just a matter of expanding it.

It seems really odd to me that while recent FCC rules changes widened many of the phone bands, particularly on 80/75, this bandplan drastically reduces and eliminates them for AM.

Again, IMHO, the IARU can do better.

As a little counterpoint to the issue, I was licensed first in 1999
(rank newbie - HA!) and took my first Element one test in 2000.

Well, I flunked it.

What I remembered though was the examiner who labored over trying to
find the different ways that I might have squeezed through and actually
passed the thing. But it just wasn't to be. Poor guy was so apologetic
and felt so badly that I ended up feeling badly for him.

So much depends on our outlook, but I would trade that guy's kindness
and eagerness to get me into the fold, over being intimidated by the
steely eyed examiner. It made me look forward to passing my test and
getting into that fraternity. Which I did a few months later. And passed.

Ah . . . back then, the 5 wpm code test was not administered by the FCC, at least not for the Novice ticket. It was administered by your fellow operator, as part of the examination for Novice.

I gave a number of Novice exams back then, and it was always a pleasure to do so. I also taught a number of Novice classes, most of which was code, and enjoyed doing it. Mostly I think my students enjoyed it, too.

So we got both experiences . . . an Elmer's kindness, plus the steely eyed examiner <grin> (Although my memory of the examiners in Chicago is a pretty positive one.)

73, Steve KB9X

DXNL 1541 - Oct 17, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

BV - TAIWAN, AS-020
Juergen,BX3/DJ3KR, will stay in Taiwan between Oct 18 and Nov 5 and
plans to hit the airwaves in all modes on all bands. QSL via homecall.

CT3 - MADEIRA, AF-014
A German group (DJ6QT, DJ7JC, DK8NC, DL8OBF) stays on Madeira (AF-014)
from Oct 16-30 and plans to show up as CT3/homecalls on all bands.
They will sign CT9L during the upcoming WAG and CQWW SSB Contests.
QSLs for CT9L via DJ6QT, all other QSLs via the operator's homecalls.

HI - DOMINICAN REPUBLIC, NA-096
After being in Senegal for a while Dani,EA4ATI, has been staying in
the Dominican Republic for a few months now and finally received his
license (HI5/EA4ATI). He is working with 100 watt and dipole.
QSLs via homecall.

HS - THAILAND
HS0ZHR (OP SM1TDE) has returned to Sweden. He had to leave Thailand
much earlier than expected.

SP - POLAND
The special event station HF100SK marks the 100th anniversary of the
scouts in Poland. It is working from Skierniewice till the end of 2007.
QSL via SP7ZIA.

SU - EGYPT
SU50JOTA remembers 50 years of JOTA and will be QRV in CW/SSB on 15/17/
20/40/80m from the "International Scout Centre" in Kairo on Oct 20/21.
The team members are SU1GS, SU1SA, SU1AO, SU1KM, SU1KA, SU9NC, SU1SK.
The QSL manager is SU1SK.

T6 - AFGHANISTAN
John,KE6GFF, will be QRV again from Kabul signing T6EE between Oct 18

and Nov 13. His preferred frequency is 14.210 MHz and he plans to take part in the upcoming CQWW SSB Contest as well. QSL via home address: John Kountz, 1065 van Dyke Dr., Laguna Beach, CA 92651, USA.

V3 - BELIZE, NA-073
John,W5JON, and his XYL Cathy,W5HAM, will be active from the island Ambergris Caye (NA-073) from Oct 25-31. Listen for V31FB in SSB on 10-160m (also in the CQWW SSB Contest) but he also likes to make skeds for 160m. Cathy prefers the beach holiday. It was many years ago when she promised her husband he may go anywhere for contesting as long as there is also a beach! Now they are going to visit Belize for the fifth time. John will use an IC-7000 plus a 400 watts amplifier and has a free sight to Europe.

V4 - ST KITTS AND NEVIS, NA-104
Scott Andersen,V4/NE1RD, is going to the airwaves from Oct 24-31. He hopes to set a new record in the QRP category of the WWDX from the island of St. Kitts (NA-104). You can get eQSLs, LoTW confirmations and also regular paper QSLs via bureau or direct. SWL reports are welcome.

VK9/L - LORD HOWE ISLAND, OC-004
Haru,JA1XGI, will be active as VK9GLX in CW/SSB/RTTY/SSTV on 20/30/40m and possibly also on the lowbands from Oct 19-22.
QSLs via bureau or direct to JA1XGI or direct only via W8XGI.

VP5 - TURKS AND CAICOS ISLANDS, NA-002
VP5/WA2VYA, VP5/K2WB, VP5/W2WAS and VP5/N2VW will be QRV in CW/SSB especially on the WARC bands from Providenciales (NA-002) on Oct 23-30. They will use the call VP5T during the CQWW SSB Contest (QSL via N2VW). All other QSLs should be sent via buro to the OPs homecall or via LoTW.

XU - CAMBODIA
A Finnish/Belgian team consisting of Wim,XU7TZG, Reijo,OH4MDY (XU7MDY), Anni,OH4JGE (XU7JGE), and Jack,ON4AJV (XU7AJV), was announced to become active from Oct 20 until Nov 5. Following QRGs have been published: 1825, 3507, 7003, 10104, 14007, 21007, 24897 and 28020 kHz, but the lowbands will be emphasized.Listen for XU7MDY in a single band category of the CQWW SSB Contest. Unfortunately QSLs only direct.

3V - TUNISIA
The "Gold Jubilee of the JOTA" will take place from Oct 19-21 and the "Tunisia Scouts Amateur Radio Club" celebrates its 10th birthday during the same time. Listen for 3V8CB and 3V8ST QRV sein, mainly in CW/SSB. QSL cards only via bureau, NOT direct!

4O - MONTENEGRO
The radioclub of the "Council of Europe" and Ranko,4O3A, are going to activate the new DXCC counter Montenegro using the call 4O0CE from Oct 17-21. Reason for that is that Montenegro has joined the Council of Europe last May. QSL via F5LGF.
Online logs will be available at: http://ewwa.free.fr

6W - SENEGAL
Jovica,T98A (ex-ST2A), has passed the Senegalese license exam now and promised to be very active as 6W1SJ for the next two years. Jovica preferably works in CW, but also some SSB and digital modes. There are good chances he might activate also other African countries from there. QSL via T93Y: Boris Knezovic, Box 59, 71000 Sarajevo,Bosnia-Hercegovina QSL via bureau or e-mail requests (t93y@lol.ba) are possible as well.

6Y - JAMAICA, NA-097
John,W2GB, will be QRV as 6Y0B from Oct 23-30, including the participation in a single OP category of the CQWW Contest. QSL via W2GB.

A3, 5W, KH8, ZL - SOUTH PACIFIC TRIP
Willy,ON5AX, and his XYL Magda,ON3AX, are travelling the South Pacific Ocean between Oct 17 and Dec 14. They will be QRV in CW/SSB/PSK on 40m/30m/20m and they also intend to participate in the CQWW SSB Contest while staying on American Samoa. This is their travelling schedule:
5W0AX Samoa (OC-097) Oct 17-22
KH8/ON5AX US-Samoa Oct 24-29
A35AX Tonga Nov 2-14
ZL/ON5AX Neuseeland Nov 16-Dec 14

INDIA, SPECIAL EVENT STATION
The special event station AT0MWG is working in CW/SSB/RTTY/PSK from the "4th Military World Games" (http://www.mwg2007.org) which are held in Mumbai until Oct 21. QSL via VU2SWS.

TURKEY, SPECIAL EVENT STATION
The Republic of Turkey is celebrating its 84th anniversary this year. For this reason TA2IJ is working as TC84IJ in CW/SSB until Oct 21. QSLs via TA2IJ.

GOLDEN JUBILEE OF THE JOTA
Following stations were announced to hit the bands during the upcoming JOTA event next weekend:
CT7EPO QSL via CTEGW
HL9BSA QSL via WX8C
HP1RCP QSL via HP bureau
ON50JOTA QSL via ON4GDV
PA50JOTA QSL via PA3EFR

LINKS: Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

If you want to hear your QSOs mit CN2R with an audio clip you can perform a special logbook search at:
http://cn2r.net/cn2r/cn2log_interface/QSOs/Logbook.asp

UPCOMING CONTESTS

Oct 19-21: JOTA (http://www.scout.org/jota)
Oct 20/21: JARTS WW RTTY Contest

Oct 20/21: WAG Contest CW/SSB:
Please avoid the special contest free areas within the WAG Contest to
eliminate any collisions with JOTA stations.

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
NA-088, HP4, Bocas del Toro Prov. Group: Tom,HP4/W4JKC, is a scientist and
stays on Colon Island from Oct 12 until Nov 2. QSL via W4JKC.

NA-128, VE2, QC Province Group: A team of American and Canadian OPs will be
active as VE3ZF/2 (CW/SSB) and W5GED/VE2 (RTTY/PSK) from Orleans Island
from Oct 18-21.They will sign VE2IDX during the W/VE Islands QSO Party.
QSL for VE2IDX via VE3ZF, all others via homecalls.

OC-005, VK9/N, Norfolk Island: Jack,HB9TL (VK6CTL), will be QRV as VK9CNF
from Norfolk Island from Oct 19-25. QSL direct via HB9QR.

OC-164, VK6, Western Australia State South Group: Wally,VK6YS, and
Bruce,KD6WW, are working as VK6YS/p from Rottnest Island until Oct 17.
QSL via VK4AAR (d).

OC-several: Larry,N0UU, will NOT travel through the South Pacific like
stated in the last DX Newsletter. Unfortunately this was a mistake.

Lighthouse activities (WLOTA/ARLHS)

So very true. For most hams that was the first one-on-one contact
that they had with the FCC and being told that one passed the exam
made it a positive contact. Some hams also went up to the FCC office
to look up information in the public data bases or to ask for an
interpretation of the Rules. Now one deals with the FCC via the very
impersonal internet or through a third party (privatization at its
worst) , and it's a good bet that most hams do not know the location
of the closest FCC District Office or the name and face of the
District Director or any of the field agents unless and until one
receives an inspection or Notice of Inquiry or Violation because of
some problem.

At one time the staff was encouraged to visit each ham club on a
regular basis. Everyone knew who Phil Kane was and how he could be
reached.

Those days are gone. What a loss.

That is not the only reason - part of the problem was that the very high brass had no idea why we were in the regulatory business in the first place. That culminated in the big decimation of the field staff in 1995-96 with the concomitant decline of the reputation and respect that the FCC had before then.

The "tax money" that was allegedly saved was poured down other holes that were created just because the position slots came available.

But you knew that....

Bwaahaaahaaa! I walked right into that one, Phil!

However, didn't the examiner have to use at least some judgement as to whether an applicant's Morse Code copy was 'legible', and whether his/her sending was OK?

Going back before my time, when the exams involved writing essays, drawing diagrams and showing how an answer was derived, didn't the examiner have some judgement as to whether the applicant had properly answered a question?

--

The way I recall it, the examiner I met wasn't so much trying to intimidate as to simply let you know that this licensing stuff was serious business.

--

One more story:

In those days (1967-1970) the written exam questions came in a booklet and there was a separate answer sheet for your answers. They made a big deal about having two #2 pencils, filling in the little box completely, erasing completely, not making stray marks on the paper, do not bend, fold, spindle or mutilate, etc.

I'd had similar standardized tests several times in school, and there was always an air of mystery about how the tests were graded. It was implied that they were fed into a computer that had a no tolerance for those who didn't follow instructions.

Being a curious sort, I asked how the machine worked, but got no information. Top secret?

It seemed to me there were two possibilities: either there was some form of photoelectric system that shone a light through the paper, or there was a grid of contacts (gold plated?) that detected the answers by the conductivity of the graphite pencil marks.

The photoelectric system seemed more workable, but the grid-of-contacts system explained the insistence on #2 pencils.

When I went to take the test at the FCC office, I thought I might get a glimpse of the grading machine. But there was nothing that looked like such a device in the exam room.

When I handed in my completed written test, the examiner's assistant pulled out what looked to me like a manila file folder. She opened it up and slid the answer sheet inside - behind a piece of paper with holes punched in it. She counted up the holes with marked boxes behind them, then pulled out the answer sheet and looked for any questions with more than one box filled in. Whole operation took very little time. She said "You passed" and that was it.

What a letdown! No fancy machine, no photocells or gold-plated contacts, no computer, just some pieces of paper with holes in the right spots.

I got the distinct impression that I'd seen something I wasn't supposed to reveal to others.

The phrase "pay no attention to the man behind the curtain" took on a whole new meaning that day.

The USA is just one of several dozen countries in Region II. Most of
them have completely different national bandplans, and none of them
correspond very closely with FCC mode-driven allocations. It would be
pretty arrogant to suggest that all those other countries should bring
their bandplans into line with Part 97.

Oh, it was a positive contact, all right. (I got to have two of them, both in the NYC office.) I remember more the FCC men who set my friend and I up with the headphones to listen to the 13 wpm tape. They were very nice to us teenagers. It's not to say that others, who got their tickets from VE's, don't have fond memories of *their* experiences. It's just that this was, well, the official place, #2 pencils and all that... ;-) And it was in a time (1963) when authority was respected a lot more than it is now.

Seriously, I attended a W5YI VE session here in Tucson about 14 years ago to take my Extra exams. It was in someone's house, and it was so noisy, they were having what amounted to a party while the exams were being given! I did pass the 20wpm (it was given in a separate room), but I failed the written.... in the party room. I was appalled at the "QRM" atmosphere. Give me the quiet, sterile FCC exam room anytime.

This kind of got me to thinking. Perhaps the judgement part is one of the reasons that essays went away. In a related situation, the first time I took my driving test, I went before a steely eyed Examiner, a state policeman by the name of Nix. I aced the written part of the test, and aced the driving test too. Then on the way back to the building where they were headquartered, he suddenly yelled out STOP NOW! I did so immediately, thinking there might be an emergency situation; after which he looked at me, grinned, and said "Congratulations, YOU flunked!" When I asked what I did wrong, He said "You didn't use your turn signal." My test was already over, and I did everything asked, and yet I couldn't do a thing about it.

I am a big supporter of the tests the way they are now.

While serving, I had seven ranks, 10 PCS moves, including two
unaccompanied short tours (12 months in 1979 and another 12 months in
1988), one long tour (1989), several deployments, lots of awards, and
got to play radio, too.

I agree. Your story about the driving test shows how arbitrary that judgement could be. Things like handwriting legibility and how good someone is at English composition could make the difference.

Another issue is the need for examiners who knew the material well enough to grade the tests. Anybody with the right answer key can grade a multiple-choice test but essays require a grader that knows the stuff - and has the time.

Historically:

- Novice was always all multiple-choice.

- the pre-1953 Advanced had essays, diagrams, show-your-work problems and multiple choice. When it was revived in 1967, it was all multiple choice. (No Advanceds were issued from 1953 to 1967).

- Technician/General/Conditional and Extra had essays, diagrams, show-your-work problems and multiple choice until about 1961, when the old blue-book tests were replaced with all-multiple-choice tests.

There was not a single changeover date from blue-book to multiple choice exams, because the examiners
were instructed to use up their existing stock of old exams before starting to use the new ones. So depending on where you went for the exam, you could get one or the other. I suspect that busy exam points like NYC used up their stock of old exams very quickly, while a less-busy place might have used them for quite a while after the new ones came out.

- For the first two years of their existence (1951-1953), Novice and Technician were tested at FCC offices unless the examinee could meet

the "Conditional criteria" of distance or physical disability.
After that time, those exams were issued by mail using a single
volunteer examiner, regardless of distance.

>From what older amateurs have told me, the reason FCC made the
switch was that the exam points were being inundated with people,
particularly teenagers, coming to take the exams without adequate
preparation. The tests were free in those days, and a kid on summer
vacation could show up at the FCC office three times in a summer
with the 30 day wait. IMHO the FCC wanted to both reduce their
workload of failed exams and reduce the number who passed simply
because they'd gone back so many times that they'd seen all the exam
versions.

The by-mail exam process slowed things down a lot because there
was a 6-8 week processing delay at every step, plus all the work was
at FCC Hq.

All the amateur radio written exams I took were multiple choice.
None of them were difficult at all, IMHO. They did require knowing
some radio theory and regulations governing the ARS, though.

> I am a big supporter of the tests the way they are now.

Two things I would change in the exam *process* (not *content*,
but *process*):

1) I would go back to the way things were in the late 1970s,
when FCC conducted the exams, both in their offices and by
request at hamfests, club meetings and almost anywhere that a
certain minimum number of examinees could be guaranteed.

2) I would make the exams themselves 'secret', that is, no more
open question pools.

Of course 2) would depend on 1). The chances of either actually
happening are probably 'slim to none'.

They don't have to.

The point I was making is that the IARU Region 2 bandplan is supposed
to be a plan for the entire Region. Yet it denies
AM operation on all but two small slices of two bands, regardless
of what FCC regulations or our national bandplan allows.

If I operate AM on 40 meters (say, 7290) during the daytime, is it bad
amateur practice because it's contrary to the IARU bandplan?
Or is it good amateur practice because it's in compliance with the
ARRL bandplan?

It's one thing to say that AM operation (or any mode) should
center around a certain frequency - that's what bandplans are
all about.

It's a very different thing to say there is no room at all for AM
on seven of the nine HF/MF amateur bands (60 isn't really a
"band") even though it's allowed by FCC regulations on eight
of those nine bands.

> It would be
> pretty arrogant to suggest that all those other countries
> should bring
> their bandplans into line with Part 97.

I'm not saying that at all.

What I'm saying is that national and regional bandplans should not
contradict each other.

It would be a simple matter to add a note saying that where AM is permitted by national regulations, it should center its operation on certain frequencies.

And if it is "arrogant" to suggest that other countries bring their bandplans into line with Part 97, isn't it equally arrogant for other countries to declare the use of a popular mode by US amateurs to be bad amateur practice?

Or to put it simply:

Why isn't there any room for AM on 160, 40, 20, 17, 15 or 12 meters?

hardly the band plan should agree with our rules and our rules and the
rules of the ham s in all region 2 counties should be indentical if at
all possible esp wrt the HF and MF spectrum unless radio waves on
those bands are to suddenly start respecting national borders

In the mid 70's I took the first class phone exam in front of a FCC examiner
in Cincinnati.
Since there wasn't an FCC office in town they held the exam at a suburban
hotel in one of those meeting rooms where they pull out a divider to
subdivide the room. Unfortunately there was a Mary Kay Cosmetics meeting
being held on the other side of the ballroom, and every five minutes or so
Mary Kay ladies would start clapping and singing, just like camp meeting.

No "quiet, sterile FCC exam room " that day.

At least they tried, sort of.

My General class exam was held in the Federal Building in Knoxville, TN. I've seen other articles here that described using headphones for code exams; we did not have them. The room was one of those sterile 1960s government classroom/conference rooms, and the echo was horrendous. It was kind of like copying cw through QRN on 80 meters, which is just what I had been doing for the past few months, so I did pass the test. But I do wonder why headphones were provided for some exam locations, but not for others.

That was the main reason. The Commercial Radiotelegraph Operator
exams has diagrams to the end, and we always had to call an engineer
to grade those questions.

I took my General Test at the FCC Office in the OLD Federal Office
Building in Seattle, Washington, from the Steelie Eyed, Old Crone
named Gertrude Johnson, who was the Office Secratary. She did a
REAL Good impression of "Librarian from Hell". NO talking, no noise
of any kind, if your eyes even left your desk, you FAILED. She was
Code Proficent, clear up to 35WPM, and the EIC, Bob Deitch, was even
Better. I took my First Class Radiotelephone Exam in the same place
the next year, and Ms. Johnson was still there.
Years later, when I took the Advanced Exam, in the NEW Federal
Office Building, Bob Zinns was the examiner, and they just made you
erase all the memory in your calculator. I had it a lot easier
then, as I had been doing Marine Ship Inspections, with Inspectors
from the Seattle Office for a couple of years, and had a good
relationship whith all of them.
A few years after that, I was approched by the FCC Region X Director,
Bill Johnson, and was offered a position with the Commission as
a Resident Field Agent for Southeastern Alaska, attached to the
Anchorage Office. I spent 5 years working for them, untill the
ALGORE BloodLetting, that destroyed Field Operations as we knew
it.

Actually they were processed at the License Center in Gettysburg, PA
which still processes all licenses, inputting the data into the ULS
and printing/mailing the actual document.

The success of (2) depends on the willingness to prosecute any and all
persons who reveal or possess the contents of any examination without
authorization. Does the name "Dick Bash" ring any bells? It's still
a sore point with me.

The chances of either actually happening range from "none" to "what
world are you on".

It all depended on what resources the local office could scrounge up,
because the nickel-nursers at HQ were not of a mind to buy such things
in an era when we had to scrounge surplus equipment from Federal
disposal sites. Other agencies were "retiring" or discarding stuff
that was newer and better than what we had in service. For many years
our non-technical vehicles were the Fords and Chevys seized by the DEA
from low-level drug dealers. The BMWs and Mercedes of the high-level
dealers they kept for themselves.

The FCC was, and to some extent still is, a "pauper agency". They
don't get to keep any of the license fees or spectrum auction proceeds
collected, over and above the actual cost of processing the license or
running the auction.

That was the first time that I heard Internet Al blamed for it.

I had always thought that it was Der Hundt, when The Congress laid the
task of rewriting the Cable TV rules on the agency but refused to
approve any more slots (money) for the reg-writers. and he looked
around to see who was expendable. He had no understanding of what the
field did, no matter how hard we tried, and so the blood-letting of
the field started. The then-Bureau chief (Beverly Baker, one of my
law school mentors) resigned rather than go through with it. She was
replaced by a former Chief Recruiting Sergeant for the Marine
Corps.... (no further comment)

I took early-out 10 seconds after it was offered. That's how good
morale was under that cloud 12 years ago.

During most of the 1980s they were tearing up the streets outside the
San Francisco office, and we actually had to find an inside conference
room to give the code tests.

You could get the same result, effectively, by increasing the size of
the question pool. Just go from the present 8 or 10 to 1 ratio (pool
size to test size) to something larger. It could be easily accomplished
with the issuance of the next set of pools.

There's plenty of room; Part 97 rules allow AM operation on each of those bands.

Neither the ARRL or IARU bandplan has any legal standing beyond being two (of several) recommended ways of hams using their assigned spectrum. Since the bandplans serve two different populations sets, it isn't reasonable to expect that they'll be carbon copies of each other. If every country had exactly the same assigned bands, and those countries all micromanaged the ham spectrum like FCC does, then a unified and consistent IARU bandplan might be feasible as "law" to all those administrations. In the meantime, FCC isn't issuing any nasty letters for AM operation on any band where it's authorized, even if IARU hasn't blessed that operation.

And yet, it begs the question of *should* the tests be harder? And
were they harder back in the day?

This is an oft contentious issue that I think it is possible that
memory might be playing a sort of trick on people.

I have done a little research on the subject, imcluding "study guides"
from the 1950's. I found the major difference was that the 1950s tests
apparently contained more tube oriented material.

I was also struck by the fact that some of the questions are verbatim
what they are now! Some of the electronic basics have not changed, and
there are apparently only so many ways to ask the same question.

My references are for Novice and General, and I can say that the Novice
written was very, very, easy. The General was of similar difficulty to
today's General test. When I can get materials for the Advanced, and
more importantly the Extra, I think I'll find a similar pattern.

My conclusions:

At least since the late 1950's, the testing was no more difficult than
it is now. Many of the questions have changed, but in the context of the
times it was quite similar.

Study guides were a substitute for question pools. Judging by the
verbatim content of some of the questions to what is in the question
pools, there must have been some relationship.

Perhaps one of the reasons that many people believe that the old time
tests were so much more difficult is that at the time, they were for the
test taker! Some yougster taking a General test back in 1957 would
indeed find the test hard. After a few decades of college, practical
learning, work, and experience, and a look at the new tests, one can be
excused in thinking that they are "easy", because after all the
knowledge accumulation, they are easy.

But not for everyone, and certainly the testing regimen should not be
tailored to the highest denominator, so to speak.

A frequently heard position is that the elimination of the code test should be counterbalanced by an increase in the difficulty and/or size of the written test. I suggested that back when there still was a code test, as a means of getting rid of the code test. At this point, I am ambivalent on the topic. Considering the shrinking population of hams, I'd like to keep the Technician test easy and advertise it as a foot in the door, especially to persons who are interested in ham radio mainly as a tool that is intended to serve other areas (emergency and disaster relief, for example).

I don't doubt that, but the elimination of essays and diagram drawing questions has made the tests easier for some. Persons who can memorize the material can get grades that are out of all proportion to their knowledge of radio and electronics. Larger pools would change that.

I found that to be true. In the late 1970's, I bought a copy of the Ameco study guide for the phone-one test (the thick book with an orange cover). I was unable to read it; I made absolutely no progress with it. Earlier this year, I used it to study for the GROL and found it quite easy. I wondered, at the time, whether that meant that I had become smarter.
On the other hand, some of those old study guides were clearly inadequate for the task. I have a copy of the "General Class Amateur License Handbook" by Howard S. Pyle, W7OE, Sams Publications [1961,1964,1968], 136 pages. You could MEMORIZE the entire book and still not come close to passing the test. It just glossed over the material.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet |
newsgroups is the RadioBanter site: |

http://www.radiobanter.com |

sponsored by the NewsgroupBanter project: |

http://www.newsgroupbanter.com |

It, too, supports both reading and posting. |

-- Will the material appearing in rec.radio.info be archived somewhere? |

Yes. See Google Groups and RadioBanter above. |

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

I have License Manuals from 1948, 1951, 1954, 1962 and 1971.
There are more differences than just the tube emphasis.

For example, the old study guides focused on a few subjects in-depth,
and left other subjects completely alone. Lots of stuff on
power supplies, including rectifiers and filters, but almost nothing
on receivers, for example. Lots of calculations of how to know
you're in the band with a frequency meter or crystal with a certain
percentage error and a certain temperature characteristics, but
nothing on RF exposure. Etc.

Sure - there's only so many ways to ask for the unit of resistance.

The big thing is that the old study guides simply indicated the areas
that would be covered on the exams, not the exact Q&A nor the exact
method of the test. So some mental processing was essential.

> My references are for Novice and General, and I can say
> that the Novice
> written was very, very, easy.

I would say it was *basic*. It covered the regulations, some theory,
and that's about it.

Novice (back then) was also a one-year, nonrenewable, one-time
license with extremely limited privileges. So its test could be very
basic and still cover the needed material.

>The General was of similar difficulty to
> today's General test.

IMHO, it's not about difficulty but about covering the relevant
material, and being sure the person being tested knows that material.

That's certainly true. In fact, the person to worry about is the
experienced amateur who thinks the exams are "hard" even after
gaining experience.

However, note that we cannot look at the actual exams of those days,
because they aren't available. We can only extrapolate from the study
guides. Today's tests are wide open. Big difference there!

The test-taker of those old days had no clear idea how the questions
would be worded, nor how many would be on a given subject, so the
usual response was to assume the worst and
overprepare. Then the actual test seemed relatively simple.

At least that was my experience.

1729. Entry-level class

Newsgroup: rec.radio.amateur.moderated
Date: 2007-10-22 14:59:26 UTC
From: Steve Bonine <spb@pobox.com>
Message-ID: <13hpelos43h30b5@news.supernews.com>
Source record: 3734

In a week I will begin teaching an entry-level class that the local radio club is offering. I would love any words of wisdom from experienced instructors of this material. I suspect that it has been at least a couple of decades since I last taught such a class, and things have changed a bit in that time <grin>.

The basic issue I'm wrestling with is walking the tightrope between teaching the actual questions from the pool and teaching concepts. It's not fair to the students to ignore the existence of the pool; after all, one of the goals of the class is to prepare them to take the written exam. But another goal is to get them ready to actually be an active member of the ham radio community, and memorizing pool questions doesn't contribute to that objective. So I'll try to do both -- cover concepts and review the actual questions.

Another issue is the scheduling of the class. There are proponents of the weekend method -- cover the material in a day or so. While there are advantages to that, I favor multiple shorter sessions. I think that learning is much better in that environment, but in today's hectic world, getting people to commit to multiple sessions is problematic. We've decided on six session spread over three weeks. Maybe that was a fatal error; time will tell.

I wish we still had something like the Novice license. I'd like to be able to get past the pressure of the written exam and get prospective hams some real experience so they understand what I'm babbling about in class. For example, you can lecture about repeaters, but if the students have actually *used* a repeater, they have a whole different understanding of what you're saying.

ALGORE was the guy who was incharge of the "Reinvention Of Government"
movement under the Clinton Administration. The Commission was one of
first agencies that got "ReInvented", and FOB was the first Bureau
that got slashed. It was interesting that the total number of employees
stayed fairly static thru the whole process..... $60K Engineers and
$45K Field Techs, replaced with $120K Economists, and $100K Lawyers....
and this saved money, How? Oh well, I really enjoyed my time with the
Commission, and the friends I made, and still have, some of whom are
still there. Although fewer, each year.

One year in the 1980s the annual budget for the FCC was less than
DoD's expenditure for toilet paper. For enforcement budget and
staffing shortfalls, we can thank JEdgar Hoover who made sure that
enforcement activities of agencies other than his fiefdom were starved
for funds. His legacy lives on.

A standard technique in college-level courses is to assign some readings that will not be discussed in class. Then, you give a test that covers the outside readings as well as the lecture content. You could use the question pool as outside reading material and then lecture about actual practice. Difficult questions from the pool could be covered at the end of class as an "extra help" session.

> I wish we still had something like the Novice license. I'd like to be

Keep in mind that the Element 2 written test used to be the written part of the Novice test. Arguably, it is easier to get a no-code Technician license than it was to get a Novice license. Please understand: I am not complaining. I think that is a good situation, especially if the intent is to draw newcomers into real-world communications, like disaster relief and not the self-limited exchange of beeps that the old Novice class was offered.

The ARRL license manuals do a pretty good job of explaining the material
that goes into the questions. Also try to squeeze in some demos such as
using the repeater. A few, but not too many, anecdotal experiences of your
own can be productive too. Perhaps the first time you "let the smoke out"
of a radio or tuner or whatever.

Also keep in mind the new privileges that Technicians have regarding HF
since the changes in Dec. 2006 and February 2007. Possibly print out the
NEW band charts from the ARRL site and hand them out. You could give an HF
operating demo for example.

This is an excellent idea *if* the info is readily available. Handouts
are a good idea too, as are links to specific web pages.

Another thing I suggest is demos. Talking about repeaters is one
thing, working somebody many miles away using a handheld is
another.

But don't limit the demos to VHF or FM - just showing things
like PSK31, CW, etc., are a good idea.

> > For example, you can lecture about repeaters, but if the

Hence the demos.
>
> Keep in mind that the Element 2 written test used to
> be the written part of the Novice test.

I don't think that's true. Not anymore.

Before the 2000 restructuring, the written exams were these:

Element 2 - Novice
Element 3A - Technician
Element 3B - General
Element 4A - Advanced
Element 4B - Extra

Each element required its own element plus all lower elements.

As part of the 2000 restructuring, the elements were combined:

Old Elements 2 and 3A were combined and renamed new Element 2, used
for Technician

Old Element 3B was renamed new Element 3 and used for General

Old Elements 4A and 4B were combined and renamed new Element 4.

> Arguably, it is easier to get a no-code
> Technician license than it was to get a Novice license.

Agreed - which sealed the fate of the Novice, by making Technician the
de-facto entry license.

> Please
> understand: I am not complaining. I think that is a good situation,

I disagree!

The old Novice offered a lot more than "the self-limited exchange of
beeps".

The old Novice wasn't meant as a permanent license class, but rather
as a training ground towards the higher class licenses.

Yes, the privileges were limited, as was the license term. But what
that did was to focus newcomers on a few bands and radio basics.
It also reduced the cost of getting started.

Many Novices built their first stations, or part of them. This was
practical because the limited priviliges meant that even a simple, low
cost station was competitive with what other hams in the Novice
subbands were using.

But those days were ended by the Tech becoming the entry point. Not
many new hams can build an HT as a first project!

IMHO, the ideal 2007 entry-level license would offer a variety of
bands and modes.

With all due respect, this is far from a college-level course. I have limited expectations that the attendees will spend vast amounts of time studying outside of class, and frankly I rather hope that that time will be spent taking practice exams. I think it's unrealistic to expect that if I "assign readings" anyone will actually read them.

> Then, you give a test that
> covers the outside readings as well as the lecture content. You could
> use the question pool as outside reading material and then lecture about

> the end of class as an "extra help" session.

This would be a fine strategy if my primary goal were to teach concepts, but my primary goal is to get these students a passing grade on the test. Sorry, but that's just the way that it is. I don't think it's appropriate for me to teach actual practice to people when they first need to pass their written exam.

What I would *like* to do is teach a followup class on what people need to know to get on the air -- how to select equipment, what actual antennas are like, operating procedures, and so on. But I simply cannot do that *and* teach them enough to pass the written test in the amount of time available. I consider my first priority getting them past the written test, then we can work from there.

I have to add, and I don't want to sound condescending, but I know that some of the people who will attend this class are barely literate, much less capable of reading and understanding the question pool . . . even though it's written at a junior-high level. This may be another challenge that I have -- how can I keep the intelligent people in the class interested when the dumber-than-a-rock crowd doesn't even understand the concept of what a frequency is?

> Keep in mind that the Element 2 written test used to be the written
> part of the Novice test.

Uh, no.

> Arguably, it is easier to get a no-code
> Technician license than it was to get a Novice license.

Different. Maybe easier, maybe not. Depends on how you learn and your educational background.

The written test for Novice was trivial. I had no problem with it when I was 13 years old. I also had no particular problem learning code when I was 13 years old, but the theory test for General class was quite intimidating. The Tech written is at least somewhat similar to the General back then.

> Please
> understand: I am not complaining. I think that is a good situation,
> especially if the intent is to draw newcomers into real-world
> communications, like disaster relief and not the self-limited exchange
> of beeps that the old Novice class was offered.

Sorry, but the the Novice class offered a lot more than "the self-limited exchange of beeps". It was a true entry-level license with incentive to upgrade. (You can't get much better incentive than the license going away in a year.) You got a real taste for ham radio and a real understanding of what the additional privileges you would earn really meant.

The Tech license is not an ideal entry-level license. It requires quite a bit of intimidating work to learn material that is pretty foreign to people who have no experience in radio. Once you've got the license you need someone to demonstrate the wonders of HF, else there is no incentive to upgrade.

What I'm looking for is a real entry-level license, similar to the Novice ticket, with an incentive to upgrade. I want to be able to actually teach concepts and the real skills that people need to get involved in ham radio, without feeling that I cannot do so because my limited time must be spent getting them the knowledge to correctly pick answers to pool questions.

But that's not likely to happen, so I'll do the best I can with what I have.

I actually have a bit of a problem explaining to potential Technician Class licensees that they have CW privileges on HF bands. It just seems either ironic or silly.

An HF demo is an excellent idea, but probably not possible as part of the actual class. Setting up an HF station at the classroom location would be an interesting challenge. (Might be fun, though.) Perhaps I will invite the class to visit me at home so I can do some HF work, or even schedule an extra session that's billed as a review session plus demo.

I prefer to explain things from the point of view that Technician is the entry-level license, then demonstrate HF and explain that it's available by passing additional written exams that are similar to what they're studying for now. My experience is that "CW" is a four-letter word. YMMV.

I do plan to do some demos as you suggested in your other article, including using a repeater, and maybe something related to EchoLink. This will depend a little on the background of the students, something I won't know until the first class.

Thanks for the suggestions.

I disagree!

The readings can be handouts of a few pages. Introductory stuff
with links to more advanced things.
>

Then you're essentially "teaching the test". And with all due respect,
that's a mistake IMHO. Here's why:

I think that we hams have sometimes placed too much emphasis
on getting lots of people licensed rather than educated and licensed.
The result is folks who are licensed amateurs but don't really know
how to get on the air. They're then left without the structure of a
class, to learn what's needed to actually use the license.

A recent statistic from ARRL said that 22% of new hams had *never*
gotten on the air with their new license. To me, that's a direct
indication of putting the license ahead of the knowledge needed to
use it.

Perhaps the handouts could cover the practical stuff.

If time is that limited, then IMHO its purpose is to guide rather
than to be comprehensive.

> though it's written at a junior-high level.

Who *are* these folks? I mean, the current written exams
have been passed by elementary school children years
away from middle school.

I suggest that if you have low expectations, the class will
live down to them, and if you have high expectations, they
will live up to them.

> This may be another
> challenge that I have -- how can I keep the intelligent people in the
> class interested when the dumber-than-a-rock crowd doesn't even
> understand the concept of what a frequency is?

With all due respect, if someone cannot grasp the concept of what
a frequency is, they should not be a licensed radio amateur, IMHO.
Such a lack of basic radio knowledge means the person just isn't
qualified yet, and endangers both the person and those around them.

The whole point of license testing is to insure that licensees know
the basics.

> The Tech license is not an ideal entry-level license.

Agreed. But it's what we've got.

> It requires quite
> a bit of intimidating work to learn material that is pretty foreign to
> people who have no experience in radio.

I disagree. It all depends on how the material is presented. To
use the frequency example, while most people might not know a
kilocycle from a bicycle, they will probably know that a piano
produces different tones. A simple electronic keyboard can demo
that principle easily. Then it's a short step to different radio
frequencies.

Of course it must also be learned that there's a difference between
sound as vibrating air and radio as a vibrating electromagnetic field,

but that's part of the game.

> Once you've got the license you
> need someone to demonstrate the wonders of HF, else there is no
> incentive to upgrade.

Why not as part of the frequency demo? How about a long roll of paper with various frequencies on it - 60 Hz for power, the AM BC band, the 49 MHz baby-monitor band, VHF and UHF TV, FM BC band, cell phones, microwaves, and oh yes, the ham bands. Color code it for the various services.

Then you need more time. It's that simple. The time can be class time, or it can be time the students spend reading and learning on their own. But it takes time to learn this stuff.

"If it were easy, everybody would do it."

I think it's neither.

The way I would present it is that the limited HF privileges of the
Technician are there if people want to use them. Amateur radio
is not all voice, particularly on HF, and the students need to know
that fact.

> An HF demo is an excellent idea, but probably not possible as

Or put together a video of HF stations in action. That way you
can cover a lot of ground in a short time, and present a wide
variety of modes and equipment types. Ask around - there
are probably hams in your area who would demo everything
from CW to AM to satellites to PSK31 for a video.

> I prefer to explain things from the point of view that
> Technician is the
> entry-level license, then demonstrate HF and explain that it's

But that's not entirely accurate - and you shouldn't present
inaccuracies.

The HF privileges of Techs today are far more than what I got as a
Novice, yet I was more than willing to pass the tests just to get
those old Novice bands.

> My experience is that "CW" is a four-letter word. YMMV.

It's all about attitude. CW is a big part of amateur radio, and
should be presented. There's no test for it, but it's something
Techs are allowed to do.

The key (pun intended) is to present it as something positive
that can be learned if the person is interested.

If you act like it's hard, they'll think it's hard. If you act like
it's fun, they'll get that message too.
>

I suggest that you present a wide variety and let them pick
and choose. Do not assume too much.

For example, I see many hams assuming that young people
will be interested in modes that use computers (like WinLink)
but not in modes like CW and AM using older technologies.

Yet in my experience the reverse is often true. The uniqueness
of those older modes and methods is often what they find most
interesting. They're surrounded by computers, networks, etc. -
those things are everyday, "Radio" is special to them.

You have to give them the big picture and let them pick the pieces
they like.

Y'know, what I've found around here is that most new licensees (who didn't
have to learn Morse) are interested in learning Morse.

(whether they'll actually take the time to do it is another question)

As long as one emphasizes it is not *required*, I think it would do more
good than harm to at least mention CW as an option.

Believe it or not, in 1974 I took my General code test on the same paper-tape code machine you saw the inspectors fussing with in 1956.

The pitch jumped briefly about halfway through. Didn't faze most of us, but when the tape was over one of the guys being tested protested loudly & insisted on being tested again. Don't know if he passed on the second try.

(the rest of us all passed on the first try, even with the jumping pitch)

By the time I took the 20wpm for the Extra two years later, they were using a cheap portable cassette player. It worked, but most of the "soul" was missing.

The train ride was from Milwaukee; I suspect the Federal Building was somewhat taller; and there was a Sears Tower along the walk from the train station, but I suspect it was a similar experience.

Why not teach the concept, and then *include* the pool questions
among other examples of practical application of the concept.
That would accomplish both while better tying them together.

Steve, I would say that a DEMO of anything that appeals to the senses
is excellent, be it a whole station or just a handheld VHF-UHF, with,
of course, a prearranged contact with a friend who knows that its a
class demonstration.

Audio-visual presentations have worked for six decades in getting
interest started and as a break in the formality of pure classroom
environments. It is a basic principle of effective marketing. It
gets the hook in the students to keep at it.

Yes, it is a lot more trouble to do, but even a short-and-snappy
contact with a "shack on the belt" handheld will have an emotional
appeal and break to the students. Quite probably most have already
heard this elsewhere but, with prearrangement with another ham, it
will be a solid contact. Even better, if the on-air conversation is
done with the contact's knowledge, the back-and-forth will be more

solid evidence of what can be done by Them later.

Everything should be aimed at the STUDENT. So far, I sense you have a feeling for them, a very good thing in my opinion.

The students are all looking at you in the class. You are their primary focus. The instructor has to be LOOKING and APPEARING relaxed and at-ease with the subject. You will have to appeal to their emotional senses to hold their interest. That's very subliminal but it is also an almost essential thing. It isn't acting. It is just a matter of remaining in contact with students, keeping their attention.

A lot of actual testing involves memorization of regulations, of the law itself. Memorization of such things is indespensible at any level of license class testing. It might be effective to have short periods of the class involving spotlighting just one part of that, get the class involved by having them do minor competition between themselves in front of the class on what you've just explained to them. That's a very old trick of many instructors, from public school on up to highly theoretical subjects. It can be good if presented in a friendly manner. It cannot be done effectively if it downplays the intelligence or emotional being of the different students.

Just a few words of friendly advice on your good volunteerism. I hope your classes do well and it is a success.

Which brings us back to the present-day Technician license. The 10
meter segment is quite substantial and the Novice CW segments are still
there, in the event that someone actually wants them.
Is there any data about how many no-code licensees ever use Morse?
I've seen a lot of wishful thinking among the old guard, but I don't
think that it is based in fact.

You don't have to worry about me mentioning CW . . . other than in disaster scenarios, almost all of my operating is on CW. I am a CW bigot, and it would be impossible for me to teach a class without letting my love of CW show.

But that view is very much not held by the members of the local radio club. None of them can understand how anyone could actually enjoy CW. I have tried to explain it, and I don't think I'm a bad ambassador for CW, but it just doesn't click with them. Mostly I just let the CW digs pass me by, but I have every intention of introducing CW (and other non-voice modes) in the class.

I am thrilled to hear that there is a desire to learn CW by people who were not forced to do so. I was hoping that would happen. I don't think *I* would have, so I tend to extrapolate my tendencies to today's new hams. It will be interesting to look back in a few years and try to determine how many new CW ops have come on board.

To some extent that's exactly what I plan to do. However, there are a number of concepts that aren't represented in the question pool with specific questions. That's one reason I need to draw the distinction between this being an introductory electronics class and it being a license class for the Technician class exam.

If some hams in your area have mobile setups (like I do in my car), invite
one of them to come over and demo it in the vehicle.

Well, according to Phil Kane, money is the real soul of the FCC.

I don't think it is that bad. I moved from the Midwest to California
in November of 1956. The Field Office of the FCC is in Long Beach,
CA, and that office doesn't look furnished in WWII-surplus.

I rather like my local area's Communications Auxilliary. It seems to
have been put in place some time around the Attack on America
("9/11"). The Old Firehouse had been replaced by the LAFD years ago
by a larger station somewhat close by...to all intents and purposes it
looked like an unused building. But, inside there is a converted bus
as a mobile radio station and there is a permanent base station in the
rear of the firehouse which can do HF to UHF comms. The LAFD is
responsible for the Communications Auxilliary and they kindly let the
VEC do test exams there. Seemed like the Old Firehouse is still kept
up nicely as if it could house a regular crew of firemen. We couldn't
get to inspect the Auxilliary's radio stuff but could see in through a
window set in the door.

>From the listing of amateur radio test sites, I could have gone to a
Denny's Restaurant reserved room near me or a private residence
somewhat farther away. At a mile away, the Old Firehouse and on a
Sunday afternoon was better. Getting a closer look at one of the
Communications Auxilliary's stations was a plus.

> The train ride was from Milwaukee; I suspect the Federal Building was
> somewhat taller; and there was a Sears Tower along the walk from the train
> station, but I suspect it was a similar experience

Heh, probably. I haven't been back to "The Loop" since then but been through Chicago Midway and, certainly, O'Hare, many a time since then, even a trip to Meigs Field right on the lakefront. But, 51 1/2 years ago I was just out of four years in the Army and could walk just about any distance needed. :-) I wouldn't think of trying that walk now. :-)

One thing I remember being amazed at in a 2001 trip back to northern Illinois for the Big 50 Reunion of our high school class of '51 was that WMCW in Harvard, Illinois, was still operating. I worked there a few months in 1956 when it was literally a converted farmhouse. 500 W daylight only, it was "the voice of Boone, McHenry, and Walworth Counties" sitting just off a two-lane highway and I did the whole works as the only employee. The 'studio' was the old living room and the control room was converted from the former dining room. :-) The farmhouse is gone and the studios for WMCW are now 'downtown' in Harvard, a bigger wide place in the road than it was 45 years prior. Only the single vertical for 1600 KHz remains, where I once replaced a mandatory warning light bulb that had gone out as a favor to the station owner, Esther Blodgett (of Blodgett Broadcasters).

I probably shouldn't sell the students short until I see who actually shows up. But the impetus for the class was a request from a couple of people who have already attended two previous entry-level classes taught by the radio club in the next town over. I saw their material; it's good; anyone who managed to attend their class and not pass is either unmotivated or unteachable.

> I suggest that if you have low expectations, the class will
> live down to them, and if you have high expectations, they
> will live up to them.

You have an excellent point, and I will try to act on it. On the other hand, I do have to be realistic. I have to adapt the material to the level of the people in the class, to the best of my ability and striving not to pitch it so low that part of the class gives up in disgust.

> With all due respect, if someone cannot grasp the concept of what
> a frequency is, they should not be a licensed radio amateur, IMHO.

> qualified yet, and endangers both the person and those around them.

I think you've gone too far because I went too far in my example.

Let me try to say this in different words.

The students in this class live in rural Minnesota. Electronics is foreign to most of them. They can run a GPS-controlled tractor and cover their fields without double-spraying a single row, but don't expect them to understand the concepts of how GPS works. Or want to.

It's a real challenge to teach electronics to this demographic. For one thing, their motivation to learn the material is 100% related to passing

the exam; they really couldn't care less that 1 amp will flow through a resistance of 1 ohm if 1 volt is applied. Some of it I can make "real" -- bring in a long extension cord, measure the resistance, discuss what that means when you put a welder at the end.

Most of these folks will never be electronics gurus. They don't need to be. They need to understand enough concepts to understand how to operate the equipment that they buy. Do they need to understand the relationship between wavelength and frequency to do that? No.

> The whole point of license testing is to insure that licensees know
> the basics.

I'm not sure that's actually true. Why do we care that a Technician licensee knows Ohm's law?

It seems to me that the point of license testing is to erect a barrier to entry. If that were not the case, the license pool would look a lot different. It would consist of regulations and practical knowledge that was actually used on a day-to-day basis. It would consist of material that, to use your phrase above, is essential to insuring that the licensee is not a danger to the person and those around him.

>> What I'm looking for is a real entry-level license, similar to the

>
> Then you need more time. It's that simple. The time can be
> class time, or it can be time the students spend reading and
> learning on their own. But it takes time to learn this stuff.

But I don't have more time. It's going to be hard enough convincing people to come to six sessions spread over three weeks. If I asked for more time, I would get no students. The goal is to figure out how to best use the time I have.

If I'm really successful, I will be able to lure people back to a followup class. That's the only way I'll ever get access to more of their time.

> "If it were easy, everybody would do it."

And we're back to the concept of the exam as a barrier to entry. If you have zero barrier, you have CB. If you have infinite barrier, you have no one entering.

Like everything else in life, this class is a series of tradeoffs. I picked six two-hour sessions as a compromise between having enough time to cover everything I want to cover and being able to attract enough people to conduct a class. I'll trade off time covering concepts to

time covering specific pool questions since I owe it to the students to cover both. And I'm sure I'll be challenged to keep it simple enough for some students while trying to challenge the rest.

This is an interesting discussion, and I'd like to add my thoughts. CW vs
fone is not unlike driving a vehicle w/ a standard vs automatic
transmission. Or, in my case, bracket (drag) racing a standard vs automatic
transmission. Yeah, it's easier to win when using an automatic transmission
but it's not impossible with a stickshift -- and doing so gives me more
satisfaction. Like you with the anti-CW digs, I let the digs against racing
a stickshift roll off me (for, they know not the joy of it).

Precisely my experience! In my day to day work I picked up a LOT of
electronics knowledge and experience.
NOT to BRAG but one day in 1983 I just happened to be in Detroit.
I just walked in and took the General test.
The secretary looked up my Novice license and then gave me the General test
and I upgraded to Tech Plus (it ws just called TECH then).
The hardest part of the exam for me was the parts rules and regs that were
just arbitrary like Band limits and how many days you had to respond to a
violation notice.

Same with the EXTRA exam I took in 2000. Day to day working knowledge was
more than enough to pass the exam.
>
> But not for everyone, and certainly the testing regimen should not be
> tailored to the highest denominator, so to speak.

No I think the exam should have more questions to test not just hit the high
points but also test the depth of the testee's knowledge, that is I think
the exam should have more questions, not harder just more questions.

As an FYI on the tests up to mid-2007, I've counted the number of pool
questions from my printout of the pools available in Februrary 2007:

Technician pool had 392 (35 required). Ratio of pool to requred
11.20:1

General pool had 485 (35 required). Ratio of pool to required 13.86:1

Extra pool had 802 (50 required). Ratio of pool to required 16.04:1

The pools have gone beyond 10:1 by a fair margin...even if I've mis-
counted slightly. My printouts (single spaced, both sides) FILL a
1" loose-leaf notebook.

Some time back I showed the notebook to an acquaintance who is an
aspiring actor, not a radio hobbyist. He is used to memorizing lines
of
a script and being as letter-perfect as possible, his lines as well
as
others in the same scene. His main comment went something like,
"Holy ##$%&!!! You had to memorize all that?!?" :-)

"No," I said, "Only certain things about regulations...theory and
practice should be known enough to pass."

Out of 120 questions, I missed 6 (counting the marks made by the
VEC team leader) and am sure that 5 of those were on certain
regulations like bandplan numbers and satellite operation. That was
satisfactory to me with 95 percent correct. I've got a little chart
of
bandplans and don't expect to get to outer space to operate

satellites. :-)

Did you exclude from that count the questions that were later
disqualified? When I took the tests, most of the questions about band
edges had to be dropped because of the rule change. A few others were
dropped due to errors or poor wording. I think the current pool size has
been chosen to allow for a safety margin for the elimination of some
erroneous questions. (I am currently studying for the GMDSS operator
test and the worst questions on the amateur tests are worded better than
a large number of these.)
My figure of 8 or 10 pool questions to 1 test questions was very
rough and not intended for 4 significant digit precision. However, other
FCC test pools bring the average a bit closer to it, such as the GMDSS
test pool (600 in pool, 100 on test).

Beat you. I got 100 on all three tests (amateur elements 2, 3 and 4).
I will admit that there was some rote memorization involved, especially
on the parts that I didn't know anything about (calculations involving
imaginary numbers, for example).

I'm not convinced. Did you sit in on the classes and see what was
actually presented? Were the students able to attend all the classes
or only some? Good material, by itself, isn't going to guarantee
success.

> > I suggest that if you have low expectations, the class will

That's true of any class, isn't it? Particularly one where attendance
is 100% voluntary.

I stand by my statement. There must be certain minimum
qualifications to be a licensed ham. That doesn't mean a
high level, but it does mean all hams should know the
basics of how radio works. Otherwise the whole purpose
of the ARS is undermined.

> The students in this class live in rural Minnesota. Electronics is

I'm not saying they should understand GPS to a high level. But
being from rural Minnesota doesn't mean they are incapable of
understanding basic radio if presented properly.

They don't have to *like* it, they just have to know it.

> Some of it I can make "real"
> -- bring in a long extension cord, measure the resistance,
> discuss what
> that means when you put a welder at the end.

BINGO! That's exactly it - tie the seemingly-abstract theory
to a real-world practical example. Another would be a demo
of why short thick jumper cables are better than long thin ones.

I can tell you from personal experience that most of a teacher's
job in such situations is finding an explanation that can connect
what the student already knows to what is being taught.

> Most of these folks will never be electronics gurus. They
> don't need to
> be. They need to understand enough concepts to
> understand how to
> operate the equipment that they buy.

Agreed. The license tests are the starting point, too, meaning
the person who passes them has met the *minimum* qualifications,
not that the person is an expert.

> Do they need to understand the
> relationship between wavelength and frequency to do that?

Yes! (IMHO)

> No.

Sorry, that's one of the most basic things about radio there
is. All it really requires is an understanding that low frequency
= long waves and high frequency = short waves.
>
> > The whole point of license testing is to insure that
> > licensees know the basics.
>
> I'm not sure that's actually true. Why do we care
> that a Technician
> licensee knows Ohm's law?

Because it's basic to the operation of radio.

Real world example: There's a lot of electronics out there
that requires a certain minimum voltage to work properly.
Typically 11.5 volts or so for "12 volt" equipment.
Some things, like camcorders, have automatic minimum
voltage shutdown. Most ham gear doesn't have such
protection.

At least some amateur transceivers will emit spurious signals
if you try to transmit with them using too-low supply voltage.
Synthesizer unlock and similar stuff.
Spurs that can cause interference to other radio services.
On top of that, most rigs draw a lot more current on transmit
than receive.

So if our new Technician doesn't understand Ohm's Law in
at least a very basic way, s/he could hook up their rig using
wire that has too much R, and then transmit all kinds of spurs
because the rig is getting too low a voltage on transmit. Yet it
will receive perfectly because there's enough voltage when
not transmitting. Indeed, the ham could even start a fire by
overheating the power supply wires.

> It seems to me that the point of license testing is to erect a barrier

Ohm's Law isn't just theory. An understanding of it is a practical
necessity for radio amateurs. Otherwise they're not qualified to
do what the license allows.

> > Then you need more time. It's that simple. The time can be

At a certain point, they have to be interested enough to invest
the necessary time and effort.

> > "If it were easy, everybody would do it."
>
> And we're back to the concept of the exam as a barrier to entry.

No.

It's not about "barriers". It's about a ham knowing the basics.

> If you have zero barrier, you have CB.

I would phrase it as "zero requirements". But yes, you have cb.
And look how that turned out. Should amateur radio become
nothing more than high power multiband cb? I say no.

> If you have infinite barrier, you have
> no one entering.

Of course, but the license requirements are far from infinite. They're
just the basics.

Until 1975 the LA office was in downtown LA, and its last location was on the top floor of the U S Courthouse. When the judges made them move, the deal was cut to move to Long Beach with G.I. 1960s-era furniture. It helped that one of the engineers there (a good friend and ham who rose to become the Western Regional Director but died much too young 15 years ago) was a superior surplus scrounger who found the newest-looking stuff.

Reading all the back and forth discussion of Steve's upcoming classes and his concerns... I'm getting really confused. When I was a teenager playing with CB, I didn't know nuthin' from nuthin' about radio, antennas, you name it. Once I became determined to become a ham, I eagerly learned all about it in order to pass my Novice, and then the General, and.... and at points when I saw the need (such as "gee, what is this 'swr' business?"), I learned more. So Steve, if you're so concerned about how these "students" are going to respond to your technical talks and related licensing materials, why are they even invited? Are they really interested in becoming hams? Or (at an extreme), are you recruiting potential hams like "Psssst! Hey kid - come 'eah - you wanna get a ham license?"

If they're going to whine about "Why do I have to learn this stuff??" then *I* don't think they deserve the privilege of a license.

I was and still am like that. A lot of radio stuff I learned simply
because it looked interesting or might be useful "someday".

But not everyone is like that. Doesn't mean they can't be
good hams.

> So Steve, if you're so concerned about how these "students"

Anyone with interest is invited. And any good teacher tries to
match the presentation to the students.

> Are they really interested in becoming hams?

That's the key question.

> Or (at an
> extreme), are you recruiting potential hams like "Psssst! Hey kid - > come 'eah - you
wanna get a ham license?"

Well, it's not quite like that!

The way I see it, people with interest should be welcomed and
helped. But the person has to take a certain amount of
responsibility to learn what's needed and to get set up. There's
a point where "help" turns into "doing it for" in such a way that
it actually works against the goal.

It's the old "give a man a fish/teach a man to fish" thing, aka
"learned helplessness".

> If they're going to whine about "Why do I have to learn this
> stuff??" then
> *I* don't think they deserve the privilege of a license.

It's not "whining" to ask why the requirements exist. All license test requirements have to justify their existence.

The Basis and Purpose of amateur radio includes the idea that hams will know at least the basics of radio. Ohm's Law and the relation of frequency and wavelength are pretty basic radio stuff, therefore, they belong on the test.

Simple as that.

>disqualified?

I only counted the applicable pool questions. Yes, I also
printed out the NCVEC website listing of question changes,
but only as a very general reference, not to be used
specifically for my 25 Feb 07 test. www.ncvec.org

>When I took the tests, most of the questions about band
>edges had to be dropped because of the rule change. A few others were
>dropped due to errors or poor wording.

I took my test before an ARRL VEC team. The ARRL-supplied
test question sheets had already excluded changed questions
(and answers). Good security was practiced by the ARRL VEC
team leader and the other three in the team, all materials for
testing kept in a small padlocked carrying box. Scoring
templates were translucent plastic sheets, blue and imprinted
with the ARRL logo, if memory serves me correctly.

> My figure of 8 or 10 pool questions to 1 test questions was very
>rough and not intended for 4 significant digit precision. However, other
>FCC test pools bring the average a bit closer to it, such as the GMDSS
>test pool (600 in pool, 100 on test).

After doing the total count of questions on my printout, I used
a pocket calculator to derive the percentages. It has flexible
significant digit settings and I used my standard setting of two
significant digits in the fraction of percentages. I apologize if
that offends anyone. [HP-32S II, cost $60 in 2001 off-the-shelf,
just got an HP-35S, $60 still, the latest in the 35-year history
of scientific pocket calculators, direct from HP on-line shop]

GMDSS testing would be done in front of a COLEM since it is a
Commercial radio license group. Different from the VEC.

My First Class Radiotelephone (Commercial) Operator license
test was taken at an FCC Field Office in Chicago, IL, 51 1/2
years ago. There were no COLEMs or VECs then and testing
was not privatized. All commercial radiotelephone licenses

were changed to the General Radiotelephone Operator License (GROL) much later and my First 'Phone was changed automatically to that. I kept that GROL renewed also until it became a lifetime license, no renewals required. I am not interested in obtaining any other commercial license now.

>> Out of 120 questions, I missed 6 (counting the marks made by the

>> regulations like bandplan numbers and satellite operation. That was
>> satisfactory to me with 95 percent correct.

>Beat you. I got 100 on all three tests (amateur elements 2, 3 and 4).

I concentrated only on passing my three required test elements. I wasn't in 'competition' with anyone else but myself. The FCC sets the limits on the pass versus fail and the FCC grants the license. I passed. I mentioned my observed scoring only as an afterthought. The percentage of questions passed didn't seem to be logged by any in the VEC team. Scores aren't in the data-base from the FCC.

>I will admit that there was some rote memorization involved, especially
>on the parts that I didn't know anything about (calculations involving
>imaginary numbers, for example).

Complex number quantities are not an absolute necessity in amateur radio...unless one wants to be successful in designing certain parts of radio and electronics or doing a more in-depth realization of what actually comprises impedance or admittance. I learned complex number quantities from a third- or fourth-hand used reference on mathematics given to me in 1959. [I still have it and use it as a refresher on other math from time to time] They are not hard to learn, just a bit strange to those who haven't yet gone beyond scalar quantities. Both the HP-32 and HP-35S will do complex number arithmetic as a built-in function on the keyboard and the HP-35S has a much larger program storage.

I wish you well on your GMDSS test before a COLEM.

Let me try to address your questions and comments from Jim. I
understand what you are both saying, and agree with much of it. But we
have some basic disagreements.

Let's remind ourselves of the five purposes of the amateur radio service
from Part 97:

(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateurï¿½s proven ability to
contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and
technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateurï¿½s unique ability to
enhance international goodwill.

Items b, c, and d require technical knowledge of radio. Items a and e
do not.

There are two reasons why I do not expect the students in my entry-level
class to develop a detailed understanding of electronics.

First, this knowledge is not necessary in today's hobby. Sure, it's
desirable, and it's necessary if you want to actually get involved in
certain aspects of the hobby, like building your own equipment. But it
is perfectly possible to participate in emergency communications, or to

enhance international goodwill, and not know an ohm from an amp.

Second, most people today simply do not have any desire to learn radio theory. Does that mean that these individuals should be excluded from the ham radio hobby? I do not think so. It's certainly your prerogative to believe differently. Related to this, I know that most of these folks are "learning" this material simply so that they can pass the test and that within a couple of weeks they'll retain none of it. If that bothered me, I wouldn't teach the class.

In short, my goal is to get some new hams licensed. At worst, they can fulfill two of the five stated goals of the service. At best, they will discover the wonders of the hobby and get involved, and in that process they'll learn a lot more because they want to. I hope that I can help them get involved, but they'll never get involved if they don't pass that first exam.

I have about 18 hours of one-on-many time with these folks. I have to figure out how to "best" use this time. "Best" is really what we're talking about in this subthread. I'd love to give them a good electronics background, but that's simply not possible in 18 hours. My primary goal is to get them through the exam, and that factors into my definition of "best use of time".

I don't think that my standards are too low. I would rather give these folks an opportunity to be productive members of the ham radio fraternity than to insist on a burning desire from the beginning to learn about radio fundamentals.

Hi Len,

The bandplan frequencies and satellite operations are a real issue with me. I always thought that better questions were available, since like you note, you look at a chart. I do too.

At least with the band plans, the better question for the test would be to see if the testee knew where to look them up.

Steve Bonine wrote:

If I may interject here, I think we may be treating people as a group more so than individuals.

Some of those people in your class may just want to fire up the repeater and chat.

Some of them may just want to do emergency comms.

Some may want to build stuff.

Very importantly though, they may not know until they are exposed to it.

When I first became a Ham, my interests were in applying the hobby to my other hobby, amateur astronomy.

After that, I joined a club, and went to FD. I operated Field day with a control OP. I thought WOW! this is a lot of fun. So I went for my General Test. After Struggling with Morse Code - it is not easy for some of us, I got my General Ticket.

Then I discovered Digital modes, and a whole new part of the hobby opened up for me.

I kept on discovering things, the latest being how enjoyable HF Mobile is. I built my own bugcatcher, and have been surprised how well it works, given the low efficiency of mobile antenna setups.

My point here is that I discovered a lot of things about Ham Radio that I didn't expect, and they became the focus of my hobby.

Oddly enough, I never integrated Amateur radio as I had originally planned to, in Astronomy.

Don't sell the students short. Some of them may indeed just want to "pass the test". But by exposing them to a little of the different aspects of the hobby might just awake something in them that they didn't know existed.

Some thoughts for demos:

Obvious ones like the repeater operations.

An FT-817 with a miracle whip might be just the ticket for demonstrating SSB, CW and Digital. With all the "hot" setups out there, a less than mediocre setup such as this will still be able to make QSOs with.

I'd suggest going from FM to SSB to PSK-31, to CW, just to keep things lively. Could be done by bandwidth, with an explanation of how the smaller bandwidth signal tends to get across better. It's always good to have a sked setup with another Ham in case propagation is bad.

Another approach would be to have a sample chart with the segments
labeled by their emission designators, such as A1A or J3E, and ask for
the segment allowed to Phone or Morse, or Data, etc.

This would be independent of "real life" band plans or regulations,
which are subject to frequent changes, and would test another phase
of the knowledge of The Compleat Ham.

The California Bar Exam does just that - they give you a set of laws
and a fact pattern and you have to write something - an argument, a
petition, etc based on those, not on "real life" which can be
something different depending on the latest court cases.

With all due respect, I think there's a bit of terminology confusion
here.

In amateur radio use, "bandplan" refers to voluntary, suggested usage
of frequencies,
not regulations. For example, AM operation on 75 meters centers around
3885 kHz
even though it is legal (for Region 2 Extras) to use AM anywhere from
3600 to 4000 kHz (as
long as the sidebands are inside those limits).

"Subbands" refers to the frequency limits in the regulations
themselves, by mode, class of license,
or both.

For example, 'phone modes are not allowed from 3500 to 3600 kHz for
any class of FCC-licensed
radio amateur in Region 2. That CW/data-only subband is part of the
regulations, not the bandplan.
Or the rule that only Extras can use 3500 to 3525 kHz, etc. -
regulations, not bandplan.

Yes, some hams do use the term "bandplan" to refer to the regulations.
But doing so leads
to confusion, because the term usually means voluntary agreements, not
regulations. Why
not use the term that most clearly expresses the concept?

On 160 meters there are no subbands by mode or license class, but
there is a bandplan!
Same for 30 meters.

The problem with removing direct questions on the regs is that such an approach has a
proven record of not working as a regulatory tool. Back when FCC licensed cb users,
the license form required a signed statement that the licensee had read the regulations,
understood them, and would follow them to the letter. Compliance with the regulations
for that radio service turned out to be less than FCC anticipated, however.

Putting specific questions on the regs in the tests is one way of saying that knowing those
regs is important for all hams. If they are replaced by questions about "where do you look
up the band edges" or some such, why can't the whole exam be replaced by such questions?

With all due respect, Phil, a Bar Examination is for a professional
license, not an amateur radio license. No one is expecting the
theory part to be taken from a state Professional Engineer license,
yet that would be as applicable in the same sense, yes?.

While there is so much hoo-hah about 'privatization' of amateur
radio examinations, the NCVEC are all composed of licensed
amateurs. They seem to have done good in the last two
decades and one can communicate with them about what
should be the questions. Could anyone but the FCC discuss
things about the FCC amateur radio test questions before
privatization? I ask because I was unaware that there was any
possibility of suggesting anything about that before privatization.

Steve, from all the talk of the others and your very patient replies,
I think you are doing the right thing with your preparations. It is
very basic stuff you are doing and that is a good step, perhaps the
best step for your Class of collected tabula rasas. I applaud your
efforts.

Since I've been involved in radio and electronics (one way or another)
for 6 decades, making the "Compleat Ham" (as Phil put it) just can't
be done in 18 hours. It would take at least a thousand hours, perhaps
two. Had it been that long a 'class' the drop-out rate would be
large. As you say, some aren't interested in theory, some are only
interested in certain aspects of radio. Those who only want VHF and
up operation probably could care less about the ionosphere and all
that long-distance propagation. But...the thing others haven't
mentioned or others just gloss over is that you HAVE some that are
interested enough to come for 18 hours.

"The journey of a thousand miles begins with a single step."

So far, the 'discussion' has been a lot of argument by others all
about stepping, which way to go, etc., etc., ad something or other. I
doubt that anything of that applies. They have taken the first nibble
of the bait and aren't yet hooked, but I sense you can play them in.

PRESENTATIONS of anything are always better with a sense of theater about them. That involves the personality of the presenter, the prime focus of all in this classroom. Their interest must be held and focussed on the material and that comes from their sensing the presenter' mood and personality. Projection of the presenter to this 'audience' requies confidence and a friendliness with them.

Preparation and presentation go hand-in-hand. It is nice if you can do some audio-visual things but simple, easy-to-read-at-distance graphics will do. It breaks the flow a bit, but that's good. It lets the class focus on the material; they don't always have to watch the presenter. Being at ease in front of an audience is sometimes a toughie. It was for me the first few times, but I adapted to it. The ease of the presenter is absorbed by this 'audience.' Lack of ease will reflect in the audience drifting away from the presentation and they may feel uncomfortable.

Since I'm a bit far from you, I can't watch a rehersal of your presentation and suggest some improvement, but maybe there's one or more there who would be willing to stand in for the 'audience?' I don't know how much experience you've had before such an audience but I think you will get the feel of it right quick. You know the material. The only thing left is letting your enthusiasm rub off on the folks in class.

You've made the first step for them. Now it is time to extend your hand to have them follow. I hope they ALL follow you...and eagerly.

"Compleat Hams" are not made in class. They are "made" by participating in the hobby. Traditional classes should be a part of that participation (I have little patience with the people who say, "I don't have time to attend your class on emergency communication or participate in your exercise, but I'll be around when there's a real emergency") but experience is the real teacher. And you can't begin that experience until you pass that first written test.

One of the things that continues to amaze me about the hobby is that it's not one hobby, but many. That's one of the things I hope to be able to communicate to the students in the class . . . not by preaching to them, but by describing the various aspects of the hobby (or by having someone who is passionate about "their" aspect come to class and expound on it). I do think that those who only want VHF should at least be exposed to propagation and how it works; how can they know if they might be interested in HF if they never even know it exists.

> "The journey of a thousand miles begins with a single step."

The journey into the ham radio hobby begins with passing a written exam.

I suppose that's not really true. The journey begins with deciding to take the journey. For these students, the "single step" is attending this class. That fact sure puts the pressure on the instructor . . .

> So far, the 'discussion' has been a lot of argument by others all
> about stepping, which way to go, etc., etc., ad something or other. I

> of the bait and aren't yet hooked, but I sense you can play them in.

I hope so. Time will tell.

As a related comment . . . when I started this thread, one of the issues I was trying to explore was walking the tightrope between "teaching the pool" and teaching a general electronics class. As I continue to prepare the details of the class, I'm realizing that teaching a concepts class based on the pool questions isn't really that bad. If the students come out of the class understanding the concepts upon which the pool questions are based, they will have a pretty good start at an electronics background.

There are some huge gaps, of course. For example, somehow the concept of inductance doesn't appear at all. But after living with the pool for a while, I feel better about using it as the basis for an 18-hour introductory class.

I'm sure that some of the students will spend their study time memorizing the specific questions from the pool. I hope that I have some students who will embrace the concepts. All I can do is present the material in the clearest and most engaging way that I can, let my passion show through, and provide the mentoring and encouraging environment to get them into the hobby.

> Since I'm a bit far from you, I can't watch a rehersal of your

> don't know how much experience you've had before such an audience but
> I think you will get the feel of it right quick. You know the
> material. The only thing left is letting your enthusiasm rub off on
> the folks in class.

I don't mean this to be critical of your suggestion Len, but I'm reminded of an article I saw last night on the network TV news. It seems that FEMA decided to give a news conference, and when no reporters showed up, FEMA employees pretended to be reporters and asked questions of the FEMA presenter. I'm afraid that rehearsals of this class, which would likely be held with members of the local radio club taking the place of the students, would be a lot like that. It would certainly be useful to do it, and I'm sure my presentation would benefit, but the "audience" that I get for the real class is likely to be much different from the "audience" that I would have in a trial run.

I think that the single biggest challenge I'm going to have is finding the right "pitch point" for this class. I'm expecting to have a few folks whose eyes glaze over as soon as I try to cover anything even remotely difficult and a few who will think that my level of coverage is much too general. Trying to keep the interest of the one group and not bore the other is going to be a challenge. I hope I'm up to it.

Yes, there's always one more place in what we call the Resource Pool
Net where untrained and un credentialed hams can sit around and wait
to be called - if ever. The days of a random appearance, HT in hand,
are over in this era of Emergency Comm Centers and Incident Command
Systems. They can't even get in the door of the comm centers today,
and there are no resources available to train them to assist properly
during a "real emergency". Knowing how to rag chew or work a contest
doesn't quite cut it.

In real life the FCC exams were mode up by engineers who were knowledgeable in the fields being tested. I myself wrote several questions on television standards and measurements for the Radiotelephone First Class License revision in 1972. The questions on the amateur exams were composed by staff engineers who were active amateurs.

Yes, there was a provision for input from the "outside" by writing a letter to the Examinations and Licensing Branch of the Field Operations Bureau with the suggestions. This was not a "secret" process, either, because lots of such letters were received and reviewed by the committee that was responsible for examination revisions. Some suggestions were accepted, others were rejected.

My gripe with privatization is that these are functions that should be done by the FCC, not by others. Dumping them on someone else is not the proper way to solve the problems that existed.

Thanks for the correction Jim. I should have stated that what I don't
like on the tests is questions about what particular frequencies you are
allowed to operate on by your class.

> Putting specific questions on the regs in the tests is one way of
> saying that knowing those
> regs is important for all hams. If they are replaced by questions

>whole exam be replaced by such questions?

That is kind of slippery sloping my point. Knowing that we are supposed
to ID at certain intervals, or what a wavelength is, or what unit is
used to describe electrical power (all questions from the Technicians
test) are things that require some knowledge, and simply knowing where
to look them up would be troublesome and time consuming in a real time
situation if one had no knowledge of what they were - or even what, in
which case knowing would not be possible.

While printing out that nice little chart from ARRL and posting it by
the rig is simple to the point, and can be looked at before transmitting
to make sure you are within the limits.

Of course taking into account the bandwidth of the transmitted signal,
another question that would be better on the test than the simple
statement of frequencies.

One of the REAL Reasons that Amateur Radio can play a part in Emergency Comms, is really very simple, and usually not thought of, in many Govt. EMS/Enforcment Groups.

What happenes when the Repeaters, and or Remote Bases, are lost due to Power Loss, FIRE, or EarthQuake, at the High Point Remote Locations that the EMS/Enforcment System uses, or secondly, what happens when the Telco Links from the EMS/Enforcment Comms Center fail, due to these same situations and the CommCenter can work the Repeaters and Remote Bases via RF Links but can't communicate with the next higher Govt entity?

Cases on Point here. World Trade Center Collapse.

All local South Mannhatten VHF and UHF Remote Base and Repeaters for New York, as well as most of the other Govt. Frequencies were installed on Top of the WTC. When it collapsed, they lost 95% of their Repeated, and Remote Base Comms, and couldn't talk to each other except on one or two simplex Emergency Backup Freqs, that weren't common to ALL the EMS People from ALL the Mutual Aid Responders.

LA Fire a couple of years ago.

Again, 90% of the local Camms were taken out when one of the MAIN Remote Base and Repeater Location up on the Rim of the World Highway was caught in a Flashover during a major fire. None of the equipment, that was inside the building was damaged, but ALL the Coax, and most of the Antennas were destroyed by the heat of the fire, causing these systems to be OFFLine from that point, untill MONTHS later when the tower was rebuilt.

Our EMS People depend on their Comms to work, and work reliably, in oreder to be effective in thier jobs. when these systems fail, they can still work their individual jobs, but their effectivness as a EMS System is greatly reduced. A good Emergency Plan, with TRAINED Volenteers, and Backup Equipment, and Frequencies, can help keep these EMS folks effective.

How many EMS Systems have a Backup, Mobile, EMS RemoteBase and Repeater Comm Infostructure, ready to deploy, should the fixed Infostructure Fail?

Is there an Backup EMS/Enforcment Comms Policy, inplace, that sets the rules for use of the minimal Simplex Frequencies that will be common to ALL Mutual Aid Responders, for a given Massive Comms Failure, and who is in charge of that traffic, and getting the traffic to the right places.

The Feds have been trying to deal with these senerios since 9/11, and are just NOW, starting to get a handle on SOME of the problems, and solutions, that will be involved.

We see the RED Cross, starting to require their volenteers to be Credentialed. I understand that SOME of the Enforcment folks are issuing Limited Credentials to Trained Ham Club folks that they have used before, and incorporate into their Backup Emeregency Comms Policies and Proceedures.

All this is just for local EMS/Enforcment Comms, but who can provide the Long Distance Comms, to the higher Govt. Entities, when the longlines are out. This was a MAJOR problem in the Post Katrina New Orleans Senerio. The National Guard usually HAS the equuipment, and MAY have the personnel, but are they ready on a moments notice, or does it take Days to ManUp and Deploy. Wouldn't it be nice if the Hams via their own Club System, could have a BackUp Emergency Comms Plan and Policy to provide such Systems from Local to County, and County to State, should their be an urgent need, should disaster, of these magnitudes, happen.

Bruce in alaska just one of many, who actually Think about such stuff......

I definitely agree that this should be a possible test question as one can
be out of band simply due to the width of the signal. A lot of people don't
understand this until they get "dinged" so to speak. When I teach a class,
I try to emphasize this.

Our district-wide ARES/RACES groups have several repeaters licensed to
members so no "commandeering" is necessary. In addition, we routinely
test simplex paths between our served agencies in case repeaters go
down for any reason.
>
>Even in our area, whole groups of folk have been getting licensed in
>this reverse manner. We have ambulance drivers, paramedics, comm center
>staff. I suspect in the near far term, we won't be getting in the door period,
>unless we become some kind of semi professional unpaid volunteer.

We've kicked this around too. All of our active members have been
"vetted" by the state police for RACES ID cards and most of us carry
Sheriff's Office entry passes (picture ID, not law enforcement officer
credentials) that are necessary to get into facilities where the SO
provides security.

We've also kicked around the situation where in our hospital we have
to go through the Emergency Room entry area to reach the EOC, and the
ER docs and nurses are empowered that if during an emergency/lockdown
they see anyone in the ER whom they do not recognize they are to have
security detain them for interrogation. For that reason those of us
who serve hospitals also have hospital picture IDs issued by the
security department.

Welcome to the 21st Century.

I think a new class of Ham is inadvertently coming about - that
>of the quasi-professional ham - one who is employed in a field that
>occasionally calls on them to use their amateur radio license in pursuit
>of their work. Note that the FCC has upheld this as legal IIRC.

Most, if not all of our served agencies have ruled that in a "real"
emergency, the employee does his or her regular job, not serve as part
of the Amateur Radio teams. We have MOUs with the served agencies
that we will provide the necessary comms if their regular comms become
unavailable.

The only exception is with the HEARTNET role as the secondary backup
for the inter-hospital ER status and reporting system carried on 800
MHz with a primary backup of 155 MHz, and if both of those
"commercial" services go down, the 146 MHz simplex net is used by ER

personnel who are licensed hams. We have no problem with that because the traffic that would be handled is very medical-specific and decisions have to be made "on the fly" over the radio, and it's better to have the RNs do it than to have to pass messages through non-medical personnel.

>The major downside of all this is that as Emergency ops move toward this
>mode, the question arises of why they would be using amateur radio to
>perform the function at all - they might as well have their own system
>on their own frequencies, that they alone use.

And they do. We are the "whenever all fails, we are still there." And the "modern" 800 MHz systems are virtually useless when things get hot because of either system hardware failure or priority public safety traffic making the system unavailable to "lower on the ladder" users.

A very small payback for the privilege of using the spectrum that we get.

There you have it. I would say that those who are running the show are
very VHF/UHF centric. They don't know about long distance radio, except
for perhaps satellite Operations, which are still line of site. Someone
somewhere has to know what bands to use at what time and for what distance.

<A bunch of good stuff snipped>

> The Feds have been trying to deal with these senerios since 9/11, and
> are just NOW, starting to get a handle on SOME of the problems, and

Your post is pretty accurate, Bruce.

One of the things that I want to add is that while Amateur radio was one
of the few things that worked very well, those who are in command are
bent on turning it into something more like what failed.

I believe that the present day post 911, and even more post Katrina
emphasis on emcomm Amateur radio is imposing a structure upon those Hams
who would volunteer their time, when in fact, what has allowed Ham radio
to work in emergencies is that very lack of structure among
knowledgeable Hams who in a random fashion come forth and offer their
services and know-how to the problem at hand.

I believe that imposing a structure on the ARS, and bringing it into the
fold, so to speak, will increase the chances that Amateur radio will be
the one to fail along with other parts of the emergency operations.

As we are called upon to have our backgrounds checked, our lifestyle and
financial dealings investigated, and resign ourselves to hauling out the

trash or unloading trucks, there will be less of us willing to spend our vacation time or even simply lose money to offer our services.

At that time, most of what will be left is those quasi-professional technicians who are licensed to talk, but know precious little else about how to make sure the comms continue. Then comes failure.

It's a real problem, because those who make the decisions can only see solutions as application of structure, and if there is a problem, the answer must be more structure. Its like the old saying "If your tool is a hammer, all problems look like nails."

This is a very controversial position for sure, as witnessed by local Emergency people's reaction when I bring it up. My only suggestion is for people to look at what causes failure, and correct it. Some times what seems like a good idea is what causes failure. If that is the case, no application of more of that "good idea" will create success.

Most, if not all, of our served agencies have or are getting HF
transceivers for "long distance" communication. If the repeater
and/or packet relays go down, that's what we have to use to connect to
state and regional EOCs, usually by NVIS facilities. Most of our
leadership have those in their home stations as well. Some of us are
looking into automatic interchange between VHF to HF for digital
traffic. We aren't content with a "shack on the belt" approach.

Perhaps your local setup is doing well, Phil, I can only see what is
happening locally, and what I get from the news.

I suspect they have some good people running the show there?\

They can be programmed or modified to.

For example my Icom IC-V82 2m handie will transmit anywhere from 136-174 MHz. This was apparently necessary to allow it to operate on the US 2m band 144-148 MHz. Here in Region 1 (UK) we only have 144-146 on 2m so so in order to keep the warranty intact, I asked the importers to modify it for the US band when I bought it, as I travel there on holiday regularly. They told me that opening it up to 134-174 was the only way it could be done, apparently the firmware in US versions that cover 144-148 only is different.

Last December, some hams in my town put on a "Ham Cram" one-day study and license test for Technician Class. One week ahead of time, the students received a print-out of the question pool. On Ham Cram day, from 7:30 AM to 1:00 PM they were drilled on the questions, with the correct answer being stressed. After a lunch break, at 2:00 PM my VE License exam team arrived to test them. 13 of 14 passed. BUT, I have had contact with several of these students since the Ham Cram, and they had almost no practical knowledge of amateur radio. They required A LOT of Elmering. IMHO, lessons spread out one night a week for a couple of months, with practical demonstrations and discussions of ham culture would have made much better hams.

There is very little math on the Tech test. If you can't remember to divide
the number "300", you probably won't remember the rest of the answers.
However, experience makes a good ham, not knowledge of the answers. I am an
extra class ham, but I realized that without experience or a fundamental
knowledge of electronics, I really couldn't do much more than push a button
and chat.

All HF rigs that I have permit one to set and transmit SSB in the CW/Data
portion. That is operating out of band. Happened to a lot of continental
US folks last weekend in the CQ WW contest. I suppose they got excited and
weren't paying attention to the frequency readout.

> only on HF can this be an issue since only hthere does the rules contiue

You are overlooking the splits by mode. For example it is against FCC rules
for continental US stations to transmit any voice mode in the CW/DATA
portion.

Even if there is a question in the pool, it may not show up in an actual test. Basically the pool needs to contain several questions of this type to insure that one does show up on the actual test taken.

All the HF amateur rigs I have seen will also permit one to transmit
data modes in the 'phone/image subbands, which is also against US
regs. Some will permit things like too-wide-for-the-regs FM on HF,
too.

> That is operating out of band. Happened to a lot of continental

Or they don't know the rules well enough to apply them all the time.

> For example it is against FCC rules
> for continental US stations to transmit any voice mode in the CW/DATA
> portion.

Whether we like it or not, subbands-by-license-class are a reality for
FCC-licensed amateurs. That's a reality which isn't going to change
soon, because FCC has repeatedly denied all proposals to eliminate
subbands-by-mode or subbands-by-license-class on the HF amateur radio
bands. We might someday go to subbands-by-bandwidth, if someone can
come up with a reasonable proposal, but the situation won't change
much if that happens. We'll still have the case of 'you can't transmit
that mode on this frequency'.

There's also the fact that we US amateurs - all of us - are allowed
by the regs to design, build, repair and modify our rigs, and they
don't have to be formally type-accepted or certified. So it makes
sense to require us to know the regs rather than expecting our rigs to
prevent our mistakes.

> Even if there is a question in the pool, it may not show up in an actual

Even if the question shows up on the test, the person can get it
wrong.

IMHO, one of the fundamental weaknesses of the written tests today is
that all subjects and questions are lumped together so that a person
can have huge holes in their knowledge yet still pass. This is of
particular concern because the holes can be in subjects like safety
and regulations.

I think it would be better if each test were broken down into subelements-by-subject, and marked in such a way that you'd need a passing grade in each subelement to pass the whole exam.

Remember that the exam is built by choosing a given number of questions from each subelement. For example, there are four questions on the Tech exam from subelement 1, which is FCC Rules and station license responsibilities. When the pool was constructed one of the aspects was a weighting of the various topics. There are, for example, only two questions from subelement 7 (Operating in the field. Contests. Special events. Satellite operation).

I don't envy the committee that formulated the pool. No matter what they come up with, a lot of folks will criticize it. A fine example of a thankless job.

I think that the optimum recipe for baking a new ham is first a class that teaches basic concepts based on the pool questions, then the exam, followed by a combination of classes and one-on-one Elmering to get the new hams on the air and integrated into the ham-radio community.

If you present a prospective ham with the prospect of a class that continues for months they're likely to be intimidated to the point of deciding that they can't make that level of time commitment. The trick is finding a scheduling scheme that gives you enough time to do more than just go over the pool questions but doesn't scare away all the prospective students.

A one-day cram might be a good starting point *if* there is plenty of followup support and the new/prospective hams are encouraged to do more than attend the one-day class, pass their written test, and then never get involved with the hobby. Personally, I don't care for cram sessions, but some people do, and they have the advantage of providing an opportunity to get people "hooked" and thereby get them into appropriate followup activities. They also have the potential for being such a negative experience that they turn off prospective hams. Everything is a trade off.

The key to getting new people involved in the hobby is to pique their interest enough that they follow through. Back in the "good 'ole days" the allure of radio technology was enough to attract folks, many of them teenagers, into the hobby. In today's world, radio is pretty "low tech" and this natural attraction is diluted by newer bells and whistles. We need to do the same kinds of public relations and marketing that is done by other activities that are competing for peoples' spare time. We need people to read or see something that makes them think, "Gee, that could be a rewarding activity." You can offer all the entry-level classes you want, but if no one is interested enough in the potential of ham radio to attend the class, nothing is gained.

That's not to say that I have any magic answers on how to do this. I do see a trend of more "middle aged" recruits coming on board these days -- people who have had the idea in the back of their heads for years of getting into ham radio, and finally have time to act on it. My experience is that many of these folks see an article about ham radio being used for some aspect of public service, and that's what re-kindles the latent idea, but I have no real scientific basis for that belief. I think it would be a good use of ARRL funds to do some market research in this area, figure out what it is that's motivating people to enter the hobby, then use that knowledge to improve our PR.

As an aside, for those who might be interested in the class that was the impetus to start this thread, I've got ten students and I think that things are going well. Most of the students are interacting in the class and seem to be enthusiastic about what they're learning. (Well, perhaps "enthusiastic" is a bit of an overstatement since much of what we discuss is dry regulations, but at least I haven't heard any snores yet.) Of course it is much too early to tell how successful we will be since I will judge that based on how many of these folks I hear on the air and see at local ham-related activities six months from now.

I agree with this, but it brought a question to my mind.

The new generation of HF transceivers -- the ones that have quite a bit of computing ability built in -- do they have the ability to enforce sub-bands? Certainly they *could* have that ability, since they already "know" the band edges and in most cases won't allow you to transmit completely outside a band allocation, but why not support the next step and not allow SSB in the CW band?

I don't think that most folks who find themselves doing something stupid like using SSB outside of the US sub-bands do so because they don't know the regulations. They get caught up in the excitement of a contest or chasing DX or their mind slips out of gear, and when they realize what they've just done they feel about two inches tall. I would like to see the flexibility in a piece of equipment that I just shelled out big bucks for to keep me from doing this, while at the same time giving me the flexibility to program the segments that apply to my license class or if I take the rig to a different location where the rules are different.

Or maybe this is already a feature of the new rigs. I wouldn't know, not having bought any HF equipment in this century.

Steve, I've got to agree with you 100% on that. :-)

I did pause a moment to reflect on a few years of lots of folks'
comments, on-line, off-line, in-print, in-person. There's some
relationship to "instant gratification" that is a catch-phrase in all
the complaints. As I sense it, all the "experienced experts" on
everything want the TEST to prove all successful applicants
become Instant Experts almost as good as the complainers. :-)

The predecessors of the FCC and the FCC itself continued to
use licensing (and tests for same) as a regulatory tool for their
lawful charter of all US civil radio. It was never, ever intended
to be any academic test good enough for award of a degree in
a subject...yet so many others blur the distinct difference of an
amateur radio license TEST verses expertise a la academia.

Back when the FCC 'personally' tested radio operators, it was
proclaimed a 'Real Test.' From expeience of many of my
contemporaries, that 'reality' didn't exist. There was no way
one could 'test' for radio equipment of 1956 to make anyone
'expert.' When the FCC revamped a lot of their work to include
privatization - which included Frequency Coordinaton of many
PLMRS users as well as amateur repeaters - it became a
'bad thing.' The TEST was no longer 'real' since all the
questions and right-wrong answers were public...which came
about through other political work, not the fact of privatization.

I cannot see where the Volunteer Examiner Coordinator system is so 'bad.' It is composed of active fellow amateur radio licensees and I doubt that any of them could be considered dummies. That's better than having questions and answers thunk up by a faceless few at the FCC, ones whose primary task is radio regulation, not boosting amateur radio nor trying to get more licensees. All in all, I think the VEC QPC is doing a FINE job given their virtual free rein on what to ask in every test element.

It is even better when one considers the first word in their description: Voluntary. Those on the Committee have guts as well as experience in volunteering for a sometimes thankless task. I salute their work and dedication (with all five fingers, properly) for keeping up that task for two decades (give or take).

I acquired an Elecraft K2/100 about 18 months ago. It has been
augmented by the K3 now. Both are top-of-the-line HF rigs in kit or
modular form (think of a Heathkit on steroids). Neither has the
feature that you are describing.

I am just starting to get my feet wet in homebrewing, etc., and need to consider getting a scope. I see a chinese product on ebay, "DSO 2150 USB Oscilloscope" which seems to have adequate specs for un challenging measurement requirements.

I was wondering if anyone on this reflector has had any experience with this product?

I should imagine that this facility would be easily added as a feature. But they never will. When I moved from the UK to Australia, I took my region 1 HF radios to region 3. I contacted Kenwood and Icom to find out if I could reprogram the band edges to allow use of the larger 40m band. Both were very helpful and told me how to "wide band" them, which fixed the problem.

I found out that the radios were available in 3 versions. One for each region. And it was not possible to make one version into another without replacing ICs at the factory.

If "mode sensitive" sub bands were programmed, every time someone moved, or a change in bandplan was brought in, it would be nessesary to go to the Yaecomwood dealership and ask to have the radio changed. An expensive, time consuming and unnecessary exercise :o)

Besides. I wouldn't buy a radio that was restrictively programmed in a manner I wasn't able to undo. Just for the principle of it.

This will cause a problem for those who use AFSK for RTTY rather than FSK.

The radio has to be set for "SSB" to use AFSK. The effect on the receiving end is identical to using FSK and so is a perfectly legal way to do RTTY.. If you put this as a "hard point" in the radio, you eliminate using AFSK for RTTY. Something along the lines of the "law of unintended consequences".

You can program many new rigs to auto mode switch based on frequency but
they also allow you override that auto mode at any time.

I never got a class for my novice license thirty years ago. I listened to a lot of code on a shortwave radio in the parlor of a church's community building and practically memorized an ARRL publication entitled "How to Become a Radio Amateur" if I'm remembering correctly. And even though I'm an electrician by craft let me assure you that there is not a lot of theory to electrical service work. The only time I've needed ohms law is for long outdoor feeders but I was ahead of the other apprentices when I learned about feeders because of amateur radio. I let my novice license lapse because I moved to an apartment and could not have antennas there.

So back in January my Fire Chief calls me aside and says since you've been training the Community Emergency Response Team volunteers and studied up on disaster preparedness I want you to represent the department on the cities Disaster Preparedness Committee. My work on the committee showed me that the local government could not afford a lot by way of communications for disaster response work. The only likely source of help we could identify was amateur radio.

I new there had been a lot of changes in the thirty years gone by so I took the technician class given over two weekends in February of this year. One of the things that the instructors showed us was some home brew antennas. After passing my exam I tackled a collinear J-Pole as my first home brew antenna because I could afford the tubing a lot easier than I could afford any of the ready made antennas that claimed a similar gain. I bought a used SWR meter, a club member checked it against an antenna analyzer into a club antenna, and using only that SWR meter and some patience I adjusted the J-pole to an acceptable SWR. A used Yaesu FT470, Mirage BD35, and that J-pole, and I'm working a fair number of repeaters, participating in the local EMCOM training net and working every public service gig I can. I can't build a radio yet, but I have been praised for my work on the events by people who have no reason to butter me up. I got to try out HF at the Get On The Air table of the clubs field day in June and the list goes on. I think I'm getting an awful lot of mileage out of that two weekends.

I know I'm rambling but don't sell your students short. If you put the effort into preparing a lot of show and tell, using real world examples they may surprise you with how much they learn. Some of what they learn you may never be aware of but the stuff I learned out of ARRL books is still helping me feed my family. The material they put in the effort to present during those two weekends back in February is helping me to learn to help my community if the stuff ever does hit the fan.

Today's ham equipment has plenty of computing capacity to be able to handle band edges, sub-bands, and band plans. These rigs can be connected to a PC and programmed using software specific to the equipment. For example, it's common to program local repeaters (and not-so-local repeaters) into the memory of VHF/UHF rigs using the software on the owner's PC then downloading the information into the rig.

It would be an easy programming effort to do the same kind of thing for HF. Let the owner pick a starting place, perhaps by ITU region, and modify it based on license class and/or personal preference. Essentially I'm asking for the capability to program the details of band plans into the rig and to easily change this information as desired.

> Besides. I wouldn't buy a radio that was restrictively programmed in a

No, neither would I (except that I've bought rigs that won't transmit outside of amateur allocations, presumably something that I could undo given proper motivation). But that's not at all what I am suggesting.

For those of you who are upset with me as an "appliance operator", I don't see anything wrong with using available technology to keep me from doing something stupid.

Indeed, it is also a problem if you use the HF set as the driver for a
transverter to a band where the bandplan is entirely different.

I don't know of any that do, in terms of subbands-by-mode or subbands-by-license-class.

But I don't think it would be a big feat of software engineering to have a lookup table that compared the mode selection with the transmit frequency, and allowed transmission only if the selection was in the lookup table.

> Certainly they *could* have that ability, since they already
> "know" the band edges and in most cases won't allow you to

> and not allow SSB in the CW band?

As N8UZE points out, this would limit flexibility, because all sorts of "soundcard data modes" are often implemented by putting the rig in SSB mode and feeding audio into it. This may become less of a problem as more rigs incorporate data modes internally. (The Elecraft K3 can send and receive RTTY and PSK31 without a computer, monitor, or keyboard).

With all due respect, if someone forgets the regs by being caught up in the excitement, they really don't know them in a practical sense.

The second problem is that, for flexibility, you'd have to include the ability to defeat/disable the feature. Which means it could be left in the off position unintentionally, and provide no protection.

Your brain is available technology and has been around for a lot longer
than computers ;-)

Seriously, I know what you're saying and I sort of agree, but I wouldn't
want to see anything forced on us. If you feel you may "do something
stupid" without assistance, fine, for my part I prefer the flexibility of
using my equipment how I want to, not how a computer tells me I should.

"What do you mean, Charlie, 'back and forth' ?" <ggg>

My engineering school, one of the top ones in the country, had a
graduate in the 1880s named Thomas E. Edison. The new school
president a while back proclaimed "Thomas Edison graduated from here".
Someone had to drop a word to him that it wasn't THE Thomas Edison,
who never went to college.

I don't know how 'easy' it would be, but it could be done. The classic
'bell-the-cat' question is: who will do the actual work?

> Let the owner pick a starting place, perhaps by ITU region, and
> modify it based on license class and/or personal preference.
> Essentially I'm asking for the capability to program the details of

> plans into the rig and to easily change this information as desired.

Or, the rigmakers could offer downloadable firmware options. When
the rules change, download an update. Some rigmakers, like TenTec and
Elecraft, do this already.

Another approach is that as SDRs become more popular, the feature
would be part of the user interface.

> > Besides. I wouldn't buy a radio that was restrictively

> given proper motivation). But that's not at all what I am suggesting.

Ultimately you'd want the ability to defeat the feature, in case the
rig were sold or loaned to someone with a higher license class, or the
rules changed, or you traveled somewhere with different rules.

> For those of you who are upset with me as an "appliance
> operator", I
> don't see anything wrong with using available technology to keep > me from doing
something stupid.

I think it depends on the intent.

It's one thing to build in features that prevent problems. For example, the power supplies of my non-QRP homebrew rigs built since 1980 have built-in time delay protection so that the high voltage cannot be applied until the final amplifier and rectifier tubes have had 60 seconds to warm up, and the bias supply is operating. That protection is not essential to the operation of the rig, but it has probably saved me from a few problems along the way.

It's quite a different thing, IMHO, to build in features with the intent that the features remove the need for the licensed operator to know things, like the subband edges.

IOW, the feature is a backup, not primary protection.

Good trick. I can see using the front-panel display for the monitor
but how does one input alphanumeric characters without a keyboard of
sorts?

Then again, what do I know? I'm just as lowly K2 "appliance operator"

>> HF.

>I don't know how 'easy' it would be, but it could be done. The classic
>'bell-the-cat' question is: who will do the actual work?

Another angle on the same challenge would be who would be motivated to
develop a vendor-independent standard, that would actually be widely
adopted by vendors, to implement this? Witness the various permutations
of DC power connectors (with amateur radio emergency groups driven to
distraction trying to establish at least local standards). Witness the
inability to develop working, vendor-independent, interoperable
standards for high-speed radio modems (9600 baud and above) that could
be found in commonly-available commercial amateur radio gear. Amateur
radio equipment manufacturers appear to prefer to differentiate their
products by unique, and unfortunately incompatible, means of interfacing
and control, with few economic incentives to standardize with other
brands.

>> Let the owner pick a starting place, perhaps by ITU region, and

>> band
>> plans into the rig and to easily change this information as desired.

>Or, the rigmakers could offer downloadable firmware options. When
>the rules change, download an update. Some rigmakers, like TenTec and
>Elecraft, do this already.

Will your amateur radio that is programmed to recognize band edges and
allowed modes be able to be modified via reasonably available tools and

techniques for the indefinite future? Examples that may cause me to think otherwise include:

- Most amateur radio equipment in the past couple of decades, for economic reasons, tends to use custom bit-masked EEPROM's to implement their internal programming, something that would not be economical to duplicate by third-party manufacturers. Though amateur radio equipment would seem to be covered by the Magnuson Moss Act (i.e., availability of parts on the open market for some period of time after the end of manufacture, preservation of warranty even if third party parts and service are used, etc.), I also recall letters to QST complaining about repair depots simply being unable to fix amateur radio equipment, some of which was less than 10 years old.

- I recall a legal dust-up from some years ago, discussed on the newsgroups, where Motorola was cracking down on efforts to reverse-engineer radio interfaces and the software that is used to modify the configurations of their radios. Regardless of whether Motorola was taking a legally defensible position, if the software is proprietary, or unable to run on current computers, or otherwise unavailable or unusable in some way, you may be left holding the bag.

Consider the problem with VCR's and the recent change in the start of Daylight Savings Time in the U.S., and no way to modify them.

>Another approach is that as SDRs become more popular, the feature
>would be part of the user interface.

This would appear to offer more promise of future compatibility and programmability, though might still run afoul of legal problems with regard to reverse engineering or otherwise developing openly-published specifications and third-party software tools. Whether or not these positions would be legally defensible might not prevent manufacturers from attempting to chill the open market for these tools via intimidation tactics. Also, how long would it take for software-defined radios to propagate out to the amateur radio community in significant enough numbers to make a meaningful impact?

>> > Besides. I wouldn't buy a radio that was restrictively
>> > programmed in a

>73 de Jim, N2EY

I think that's the important distinction. It's also related to a classic conundrum in developing safety systems in other fields. I would welcome an amateur radio that had fault protection to keep me from blowing the finals if I accidentally transmitted into no load or an infinite load. I'm not so sure about an amateur radio that would keep me from transmitting out of band or in an unauthorized mode if assumptions about what constituted "out of band" or "authorized mode" changes, or if I find myself in a true, bona-fide, communications emergency.

The Usenet newsgroup comp.risks (aka, "Risks Digest") has touched on many of these types of issues. For example, while a rev-limiter on a motor would increase safety by preventing a blown engine, putting speed limiters on automobiles to keep them within speed limits may increase accidents by denying the necessary amount of power to get you out of a reasonably unanticipated emergency situation while passing or merging. An airplane whose controls would keep you from overstressing the airframe, or flying into restricted airspace, might also keep you from making appropriate emergency maneuvers, where landing alive with your crew and passengers, but with an airframe you have just end-of-lifed, or under fighter escort to be whisked off to a friendly interview with the authorities, might be far preferable to the alternatives.

1808. Geosats for Hams truy a new world for SatARS

Newsgroup: rec.radio.amateur.moderated
Date: 2007-11-02 22:38:10 UTC
From: konstans <konstans@hotmail.com>
Message-ID: <fgg7ve$f3d$1@registered.motzarella.org>
Source record: 3615

The following is a Q-S-T. AMSAT announces plans for a geosynchronous ham radio satellite, W-R-C 2007 opens in Geneva, D-Star comes to Germany and France and ham radio operators stand down as the California wildfires are contained. Find out the details on Amateur Radio NewslineT report number 1577 coming your way right now.

**

HAM RADIO IN SPACE: AMSAT SAYS HAM RADIO GEOSAT IN PLANNING

Its called Phase 4 Lite and it will likely change the face of ham radio forever. Amateur Radio Newsline's Bruce Tennant, K6PZW, has a peek at the future of a geosynchronous ham radio satellite in Earth orbit:

--

The weekend of October 26th to the 28th has likely changed the face of ham radio space operations. So say two leaders in the Amateur Radio space program speaking at the AMSAT-North America Space Symposium in Pittsburgh, Pennsylvania. That's they announced that a first-ever geosynchronous ham radio satellite is now in its initial planning.

In satellite talk, geosynchronous means stationary in the sky. From the standpoint of a ground station user, it means always knowing where to point an antenna. No tracking and no guesswork.

At that gathering, AMSAT President Rick Hambly, W2GPS, and Vice-President of Engineering Bob McGwier,N4HY, announced that AMSAT has been in consultation with Intelsat. This, regarding an application of an Intelsat platform carrying amateur radio satellites into geosynchronous orbit.

The Phase IV Lite Geosynchronous Payload is planned to consist of similar transponders already under development for the Phase 3 satellites. Accelerated development on the digital Advanced Communication Package is anticipated. The Intelsat geosynchronous platform would be able to provide the AMSAT Phase IV Lite payload with approximately 400 watts of DC power for 15 years.

In addition to the on-orbit payload AMSAT plans to develop an earth station attainable by the average ham so that users can immediately take advantage of the audio, digital messaging, and video services of the Phase IV bird. The Advanced Communication Package would be a self-contained earth station which could be sent with amateur radio communication teams or delivered to disaster areas to provide for 24 hour a day, 7 day a week and 3565 days a year emergency communications. These teams would be able to point a small dish at a predictable spot in the sky and immediately begin delivering disaster communication support without depending on the vagaries of High

Frequency propagation.

But that's not all. Hambly and Mc Gwier say that the Phase IV payload could also be used to provide a Tracking and Data Relay System Satellite -like relay of ARISS communications. The current 10 minute school contact could now be expanded to hours-long contact with the International Space Station. This opens possibilities for extended student involvement with experiments aboard the space station.

As the late Roy Neal, K6DUE, might have said: Truly a new world of Amateur Radio.

For the Amateur Radio Newsline I'm Bruce Tennant, K6PZW, in Los Angeles.

--

So when can we expect this new satellite to be on-orbit?, AMSAT says that engineering studies, funding studies, among other negotiations are continuing so no specific date can be set. However Bob McGuier N4HY observes that the project is far enough along that AMSAT needs to begin planning engineering work and possible construction of such a geosynchronous payload so it is ready if Intelsat says they have a ride for it. (AMSAT-NA)

Couple of other modes, too. See the website - the manual is online
now:

www.elecraft.com
>
> Good trick. I can see using the front-panel display for the monitor

> keyboard of sorts?

You send Morse Code to the rig and it translates/encodes the Morse
into the PSK31, RTTY, etc. Paddles are the usual input device.

Built in, not an add-on device. The decoder is reputedly very good
too, its only limitation being the limited display space.

Yet it is possible to get all four of those questions wrong and still pass the test. The result is a licensed amateur with big 'holes' in his/her knowledge of certain areas.

> > I don't envy the committee that formulated the pool.
> > No matter what

The big question is whether the criticism is constructive, or just a form of complaining. IOW, does the critic offer a way to make the process better?

> The predecessors of the FCC and the FCC itself continued to
> use licensing (and tests for same) as a regulatory tool for their
> lawful charter of all US civil radio. It was never, ever intended
> to be any academic test good enough for award of a degree in

> amateur radio license TEST verses expertise a la academia.

Who are these people, making such claims, Len?

It seems to me that one main purpose of license testing is to insure that the licensee knows enough about the thing being licensed for so that s/he can reasonably do what the license allows. For an amateur license, that means knowing the basics of amateur radio, in the form of technology, rules & regs, and operating practices.

Most important is that the tests focus on what *amateurs* are allowed to do on the air, and how they typically do it. Experience and knowledge of other radio services may or may not be relevant. A Ph.D. in EE with multiple patents is not necessarily qualified to be a radio amateur if s/he doesn't know the amateur radio regulations.

> Back when the FCC 'personally' tested radio operators, it was
> proclaimed a 'Real Test.' From expeience of many of my
> contemporaries, that 'reality' didn't exist.

>From my personal experience, and from that of many of *my*
contemporaries, that reality certainly did exist. Not that the tests
for an amateur or commercial radio license were equivalent to
what I later encountered in EE school, but they were real tests
of what the licensee knew with regards to amateur radio.

> There was no way
> one could 'test' for radio equipment of 1956 to make anyone
> 'expert.'

Agreed - but that wasn't the purpose. The tests were to see if
the licensee had met a certain minimum level of knowledge and
skill, not that the person was an expert.

Anyone knowledgeable about Morse Code will tell you that even
the old 1 minute solid copy 20 wpm Morse Code test wasn't
"expert" level.....;-)

> When the FCC revamped a lot of their work to include
> privatization - which included Frequency Coordinaton of many
> PLMRS users as well as amateur repeaters - it became a
> 'bad thing.' The TEST was no longer 'real' since all the
> questions and right-wrong answers were public...which came
> about through other political work, not the fact of privatization.

The question-and-answer pools became public knowledge in two steps.

The first was the publication of the "Bash books" in the 1970s, whose
information was gathered by means that, IMHO, clearly violated the
law. But the top folks at FCC decided not to prosecute Dick Bash nor
those who helped him, so the books made it possible for those willing
to spend the money to see a pretty close replica of the actual exams.

The second step was the creation of the Question Pool Committee
and the VEC system in the early 1980s. This replaced the work of
paid Federal government employees with that of unpaid amateur
volunteers.

> I cannot see where the Volunteer Examiner Coordinator
> system is so 'bad.'

I think the main criticism is not of the VEC system itself, but
rather the fact that prospective licensees can see the exact
questions and answers that will be on the test.

In the pre-Bash-book days, a prospective licensee did not have
access to the exact Q&A. There were study guides which
indicated the general areas of information that would be on the test,
and in some cases the test followed the study guide closely, but
that was not the same thing as seeing the exact questions and
answers.

For example, the study guide showed some Ohm's Law problems in essay format. The actual test would show some Ohm's Law problems in multiple-choice format, but the prospective amateur did not know much else about the Ohm's Law problems on the test. The logical response in most cases was to learn enough Ohm's Law theory to be able to solve all sorts of problems in that subject.

With the actual test questions available, it becomes possible to "study the test" rather than actually learning the material. In another thread in this NG, there have been discussions about using a class to teach the test rather than an understanding of the material.

Which is better - learning and understanding the material, even at a basic level, or simply learning the test questions by rote memory, to be forgotten?

> It is composed of active fellow amateur
> radio licensees and I doubt that any of them could be
> considered dummies. That's better than having questions
> and answers thunk up by a faceless few at the FCC, ones
> whose primary task is radio regulation, not boosting amateur
> radio nor trying to get more licensees.

Again, the perceived problem is not the VEC system itself, but the fact of public Q&A.

Note too that the Question Pool Committee is, in practice, almost as much of a "faceless few" as the FCC was.

VECs do not make up the questions and answers directly. Nor do they make any decisions on the process other than selecting specific questions for each exam, to insure randomness. They only proctor the exams.

> All in all, I think the
> VEC QPC is doing a FINE job given their virtual free rein on
> what to ask in every test element.

I agree that within their limitations they are doing a good job. The problem is the limitations they have to work under. Those limitations are not of their doing.

There have also been a few *documented* instances of irregularities in the administration of exams by specific VEC groups. (See FCC Enforcement Letters).

> It is even better when one considers the first word in their
> description: Voluntary. Those on the Committee have
> guts as well as experience in volunteering for a sometimes
> thankless task. I salute their work and dedication (with all
> five fingers, properly) for keeping up that task for two
> decades (give or take).

It's good to see you saluting and thanking them, Len. Particularly considering your criticism of certain VECs in the past. What changed your mind?

Volunteer examiners go back a lot longer than the 1980s.
They date back at least to the 1930s, when the Class C license was created for those who lived too far from an FCC exam point, or who were disabled. Later (1954), all routine exams for Novice and Technician licenses, as well as the Conditional, were done by volunteer examiners.

My first amateur radio license exams were given by a volunteer examiner, K3NYT, when I was a little past my 13th birthday. I realize now that it took him some time and effort to make the exam sessions possible for me. That Novice license of 1967 opened up the world of amateur radio to me, and led to a career in electrical engineering.

And yes, I thanked him.

If the size of the pool were increased, would that satisfy your objection? Given a finite body of information, there are only so many questions that can be formulated from it to test an applicant's knowledge. I have a number of the old Ameco Q&A books from the days before question pools (for the commercial tests). If you compare the Ameco questions, that is, the questions that the author MADE UP, with the later FCC questions, you don't find a great deal of difference. I have always found that a decently written test preparation guide, in Q&A format, for a test like a New York State Regents exam, an SAT, a GRE or a GMAT is just about as good as a published test pool, especially if the pool is large. That is particularly true when the questions tend to be similar from one year to the next (For example, one year, they ask you to solve for x when 3x=6. The next year, the question is changed to 4x=8. The test prep guide has a sample question of 5x=10.)

The national Multistate Bar Exam, one element of each state's bar exam, is composed of 200 multiple choice questions. Half of those come from the published "Green Book", a compilation of 500 Q&As, the equivalent of the Question Pool Study Guide. The other half are composed on the fly by a "faceless committee" for each semi-annual exam (all given on the same day nationwide). Thus, 20% of the Q&As on each test is from a published pool, while the remaining 80% of the Q&As require absolute knowledge of the published areas being tested.

The answer choices of each question usually consist of two that are obviously incorrect and two more that appear to be very close, and the process is really to identify the better of the two. A score of 130 = 65% or better is the minimum required in most states. In California, acknowledged to have the toughest test, a score of 152 = 76% is an absolute pass where performance on the other elements of the exam are not even taken into account.

Granted that the level of knowledge required for passing the Bar exam is greater than the level of knowledge required for passing an amateur exam, the key factor in both is not the size of the published pool, but should be the knowledge of the examinee.

As we were told in Bar Exam review courses, the correct answer is right there in front of you, and all you really have to know is "a", "b", "c" , or "d".

Correction - the exam questions from the published pool are 20% of
those published. The ratio of published to non-published questions is,
of course, 50%/50%.

Objection, your honor. Counsel's answer is non-responsive.

I asked if a larger question pool would be as good as non-published questions. You responded with a tale about a test that includes 100 questions that are drawn from a pool of 500 questions (5 to 1 ratio). We have already established that the amateur pool to question ratio is over 10 to 1. Would you consider an increase to, let's say, 20 to 1 to be an acceptable solution?

Objection overruled. Now sit down at your rig and "work" someone in the cw portion of the band... at 25 wpm. You already have your license; enjoy it.

Well put Ivor. I feel the same way.

My most recent 2m radio (Yaesu FT1802) has automatic repeater shift, which I
have been forced to turn off as it tries to shift the TX on a few
frequencies which due to local convention, I require to use simplex.
Automatic features are great, especially if you can switch them off :o)

Heres a couple of questions for someone who knows about batteries.

I have two hand held radios which I rarely use. An Alinco dual bander with Nmhi batteries, and a commercial UHF with Nicad batteries. Both sets of batteries are in good order and hold a charge well. I can leave them for months and when I pick the radios up, they still have a good charge in them.

Today I lifted both radios, the first time in a month or two, and both had totally flat batteries. I know both were fully charged when I last switched them off. What happened? The weather has got warmer in the last month, and the humidity levels are up. But nothing else has changed. What flattened them both?

Also...

Last time I took a hand held radio abroad, I took 2 sets of batteries. Both were fully charged when they were packed. Both were flat when I reached my destination. Same with my mobile phone and camera batteries as well. All were nearly flat and had not been switched on during the journey. What is it that makes batteries go flat when travelling in a pressurised aircraft?

I hope someone can advise. I've been thinking about the aircraft one for ages :o)

Nothing in an airplane makes batteries go flat.

Commercial aircraft are pressurized to an equivelant altitude of around
7-8 thousand feet.

I regularly fly at those altitudes in my unpressurized aircraft with
the backup handheld in a seat pouch and the batteries are just fine.

Perhaps the batteries aren't as good as you think or the last charge
was longer ago than you remember.

All secondary batteries have a self discharge rate, some types are higher
than others, a couple of months is more than sufficient to self discharge a
battery pack. Another factor to take into consideration is that most modern
handhelds do not have a 'hard' on/off switch. There is always a small
standby current drawn. It is best to actually remove the pack from the
radio.

As far as batteries on aircraft; I have never had any problems, and I can't
think of a mechanism that would discharge them.

regards
Jeff

> was longer ago than you remember.

4 sets of batteries were all good order and fully charged the day before leaving and were all flat or almost flat on arrival.

I cant think of any reason why either. Its an odd one :o)

And it wasn't a one off, I've done this journey a few times, and had the same results. Its a long trip, UK to Australia, 3 flights, 22 hours in the air. But radio, camera and phone were not switch on during this time.

Suggestions welcome.....

I think there are a couple of reasons for that:

1) The relatively-small amateur market won't support the cost of
standardization. IOW, it would add too much to the cost of a rig.

2) The rigmakers don't want any more interoperability, because it
means less sales

Isn't that true of almost any consumer electronics?

We hams are the exception that proves the rule. We tend to keep rigs
in working order for a very long time, compared to, say, VCRs,
computers or TV sets.

Note also that hams like N4PY have come up with aftermarket software
improvements for rigs like Ten Tec.

The idea is that you're either supposed to pay Motorola prices, or
replace the radios.

Good point! But the ability to add and change filters by firmware/
software methods is a major reason to go SDR.

One way to implement such protection is to have an override switch
that must be activated for each exception. Or just a "feature off"
switch.

> The Usenet newsgroup comp.risks (aka, "Risks Digest") has touched on

> accidents by denying the necessary amount of power to get you out of a
> reasonably unanticipated emergency situation while passing or merging.

I can't think of a reasonable real-world situation where an RPM
limiter would cause problems.

Speed limiters, though, have practical problems. The max speed would
have to be set higher than the highest legal speed limit in the
country, so we're talking about 80-85 MPH. Since the car doesn't know
if it's on a superhighway or in a school zone, the practical effect
would be rather small.

> An airplane whose controls would keep you from overstressing the

>
There's also the problem of what happens if the protection system
fails.

It seems to me that the best implementation for ham rigs would be a
firmware feature that you could turn off, and update as needed by
downloads.

If these are commercial flights, are they going through
any kind of imaging screening equipment? What kind?

That is pretty darn clever. Does it have any special characters for backing up/corrections? I don't know if you've ever done it or not, but I suspect that it would be really easy to drop into "cw speak", which might be a little strnge for us native psk'ers. In any event, props go out to Elecraft for an innovative solution.

Excellent point Richard.

In recent years all luggage is x-rayed. My wife is a radiographer and always takes an interest in the machinery. She has never seen this particular type of imaging before. It shows different types of metal as different colours. Despite the commonly used name, its not really x-ray, indicated by the lack of concern of leaked radiation :o) Its definitely magnetic.

Could this be the battery killer?

STANDARDIZATION, nearly all of it industry standards,
make up nearly everything in the component parts of any
manufactured and nearly every home-built radio equipment
for at least the last half century. Everything from fasteners
(nuts and bolts) made to English and metric industry
standards, vacuum tubes, resistors, capacitors, inductors,
transistors and diodes (of the 'registered' 2N and 1N prefixes).
There's industry standards on aluminum and magnesium
alloys, even some on castings of same. There's industry
standards on rack panels even though that was once
started by AT&T for the telephone infra-structure. There's
industry standards on wire (American Wire Gauge ruling
through the market demand)...although those standards v.
government specifications blur for heavier guages.

The 1%, 2%, 5%, and 10% logarithmic-sequence of parts
values has become a de facto standard because of its
ease in equating the parts' tolerances. The 'UHF' series
of common RF connectors on amateur radios was
originally a military specification but has become a de
facto standard through its incorporation; the military
doesn't use it now, hasn't for years, the patents on it
have run out and it is a relatively cheap coaxial connector
compared to other, better coaxial connectors.

>2) The rigmakers don't want any more interoperability, because it
>means less sales

Aeronautical Radio, Inc (ARINC) was once solely a
commercial company engaged in providing air-ground
communications with aircraft before our government
got its act together and created the air traffic control
system. They still do that but ARINC is better
known to commercial avionics equipment makers as
an industry Standards Group that, by common
agreement of members, establishes standards on all
civilian avionics equipment. Those cover everything
from cases, their mounting equipment, even the control
wiring with specified connectors and specific connections

for control functions. ARINC standards have been acceptable to manufacturers and users for fifty years. The civilian avionics market is smaller than the USA amateur radio market.

The 'D-Star' VHF-UHF standard, currently under large promotion by Icom, may or may not become a standard. A lot of opposition to that standard is from US amateurs because it originated in Japan and was conceived and tested there. <shrug>

'S Meter' levels aren't really standardized as to receiver input signal levels except as a 'common use' standard and a recommendation by the IARU. Yet most are under the impression that all S Meters are calibrated/scaled alike (they aren't) and routinely report their S Meter readings in QSOs. :-)

Amateur radio equipment, especially transceivers, are designed and made for stand-alone use. Peripherals are relegated to outside-the-antenna-connector devices or different speaker boxes and other audio processing things. The external connections are standardized as to power input (AC standards from the power distribution infrastructure or DC power from the auto industry), computer interface connections (USB, serial, parallel) if those are included for read-out or computer control, and 'open-source' connections such as automatic antenna tuners made by the originating manufacturer or by independent suppliers. Microphone, headset/speaker, morse key connections still aren't standardized fully, not even as de facto standards; that allows more sales of adapters for that small niche market. :-)

I'm puzzled about all this palaver over some bandplan automatic lock-out on frequency control and transmitting. Allocations of amateur frequency and modes for same aren't locked to any standard but the common-agreement terms of the ITU-R. Sub-band allocations are always at the discretion of the national radio regulating authorities and may change at any time dependent on that nation's politicking for sub-band use. :-)

I've seen a LOT of different human factors documents and guides, but have yet to see a specific arrangement for manual control functions on any consumer electronics product. The 'need' for that seems to be no different for remote control via computer. Computer interfaces are very standardized now but that industry has had a quarter century to work those out; they evolved in the same manner as all standards did. Some have

disappeared such as the 5 1/4" floppy and the 'Centronics' connector (Amphenol Blue-Ribbon); the 8" floppy and CP/M OS disappeared so early that few computerists of today know they once existed. :-) PC operating systems are standardized on the MS Windows package through agressive marketing and buyers agreeing to that despite the 'Linux' alternative.

De facto 'standards' will come about through a combination of manufacturer's marketing efforts and public acceptance...plus other manufacturers offering 'compatible' things to work with the apparent market-leader that started the de facto standard. That's how it was "forty years ago" and that's how it will continue to be. <shrug>

They've got a lot of them. Their manuals are worth a read
just for the ingenuity that went into the rig designs.

I got a chance to use a KX1 on Field Day this year. Amazing
little rig. Complete with accessory paddles, it's about the size of a
stack of QSL cards.

Ain't that the truth! There is so much ambiguity in S-meters that they are more for self comparison than anything else. I calibrated my S-meter during an antenna comparison a year or so ago, and they wen't in agreement, and they weren't linear - which is to say that while S-7 might be a bit high, and S-5 mogt be a bit low, and S-2 something else altogether.

Coupled with what I understand was a change in how many db were considered an S-unit to boot makes the S meter more of an entertainment device, or more likely one of the less important functions of the meter we use ot adjust power, alc, SWR and the like.

So are they just discharged? Can you recharge them?
Or are they destroyed? Were the radios affected?

If you can see the scanning equipment, can you at least
get a manufacturer name from it? And maybe a model
number? With that, you could do some internet research
to discover what method it uses and if there are any other
reports of bad interactions with batteries, etc.

Well so is my IC-761, as long as you can stack up a few thousand in
maybe 30 piles.....

Seriously, the KX-1 is a nice little Xceiver.

The "Linux Hamradio Applications and Utilities Homepage" at
http://radio.linux.org.au/ is probably the most comprehensive
directory of Linux ham software. It's actively maintained and
contains over 400 different software packages, sorted by
categories like "logging", "morse", ...

I'm using Linux (and FreeBSD) for all my ham radio needs, which
is mainly logging (YFKlog for normal QSOs, YFKtest for contests)
and (very rarely) some digital modes (gmfsk, fldigi).

For some eyecandy, I am using xplanet to show me a world grayline
map on my desktop background, with markers for all DXCCs (colour
indicating cfmed/worked/needed). Of course, it's automatically
generated by my logging software.

Furthermore I have a small script running on my workstation here
which automatically check for new mail and send me the subject
line and sender in morse code if something arrives.

There are very many little neat things you can do in an Linux/Unix
environment with a short Perl/Python/Shell script, which is almost
impossible under Windows.

I started using Linux as my main OS about 4 years ago. Since
then, a lot has changed, both with Linux in general as an
operating system becoming more and more available for the
masses, but also in availability of decent ham radio
applications. And I am a little proud that I made my own, small
contributions to this. By making my own software available under
a free license and by submitting bug reports, patches and
suggestions to the numerous authors of excellent Linux ham radio
software.

The standardization being discussed was about things like power
connectors and the possible feature of the rig not transmitting
outside
the licensee's privileges (such as no 'phone in the CW/data subbands).

btw, many of the parts in consumer and amateur electronics today
are "house numbered", particularly ICs, and replacements can be a
real problem.

Key factor there is "common agreement of members".

> 'S Meter' levels aren't really standardized as to
> receiver input signal levels except as a 'common use'

Even if S meter readings were standardized, differences
in antenna systems would make the readings meaningless

on an absolute scale.

> Yet
> most are under the impression that all S Meters are
> calibrated/scaled alike (they aren't) and routinely
> report their S Meter readings in QSOs. :-)

Who are "most", Len?

None of my homebrew receivers or transceivers has ever
had an S meter. Yet I give signal reports as part of most
QSOs.

> Amateur radio equipment, especially transceivers,
> are designed and made for stand-alone use.

Most are, but not all. For example, the Kachina 505DSP,
introduced about a decade ago, requires connection to a
computer. Same for the Ten Tec Pegasus, introduced
about a year after the 505DSP.

The inexpensive PSK31 transceivers commonly known as
the "Warbler" is another example.

More recently, some software-defined rigs have been produced
that require computer connection to operate.

> Peripherals are relegated to outside-the-antenna-
> connector devices or different speaker boxes and
> other audio processing things.

Isn't being "outside" the definition of "peripheral"?

Many rigs nowadays have numerous *internal* options as
well, such as filters and firmware upgrades. These are almost
always manufacturer-specific if not model-specific.

At least one company (Elecraft) makes their transceivers
available with a wide variety of internal options that can be
added at initial construction, or later.

For example, their basic K2 transceiver is a 10 watt CW-only
80/40/30/20/17/15/12/10 rig. Options include an antenna
tuning unit, SLA battery, analog and DSP audio filters,
SSB, 160 meters/second receiver antenna input, noise blanker,
60 meters, 100 watt amplifier, and serial port. Their other
products offer similar options. But they are all specific to the
manufacturer.

www.elecraft.com

> The external
> connections are standardized as to power input

My point exactly.

> I'm puzzled about all this palaver over some bandplan
> automatic lock-out on frequency control and transmitting.

What's the puzzlement? It's just a proposed feature.

> Allocations of amateur frequency and modes for same
> aren't locked to any standard but the common-agreement
> terms of the ITU-R. Sub-band allocations are always at
> the discretion of the national radio regulating authorities
> and may change at any time dependent on that nation's

The idea was that the rig could prevent an amateur from
accidentally transmitting where s/he wasn't supposed to.
Not just out-of-band but out of subband, even when the handy
frequency chart isn't available, or the operator doesn't look at it.

I'm afraid you will find that when you start installng many ham radio apps, you are still back to 1985. One of the reasons I'm kind of a fan of Fedora is that a number of ham related apps are part of the distro, and so install easily like those on Ubuntu. Those apps, tho, aren't your loggers and such, they are more the design apps that I happen to be interested in.

It doesn't have Ubuntu's eye candy, though, and unfortunately, Fedora is intended to be the "bleeding edge" distro, so about as soon as you get it installed it goes out of support. On the other hand, after many attempts, they have heavy-duty security that is pretty painless. It took them quite a few releases to get there tho, and the other distros haven't even started down the path yet.

I disagree: any Linux distro can be made secure, and just because Redhat
has chosen "secure" defaults in Fedora doesn't mean that other distros
can't be set for security.

Security is always a compromise between useability and effectiveness,
and while Ubuntu may have chosen to set less secure defaults to obtain
easier installation (or networking, or...), the _capability_ to set
them is always there for anyone to use, not only in Ubuntu but in all
the Linux distributions.

Its about the only current operating system that will work properly on a
laptop.
Vista requires too much memory to work properly on a laptop.
We use Linux on all our business laptops now.

I would recommend trying the K desktop (distributed as "Kubuntu") because
the K programs can handle DVD's and other things more easily.
You can run K and Gnome and switch between them.

I think you miss the point. Fedora/Red Hat have chosen to use a new security model called SELinux that is far more secure than the old Linux UID based model, but a LOT harder to make work without really getting in the way. Most of the other distros have this model available, but getting it configured so it isn't a major PITA is a pretty big deal.

The system is a lot more granular than the legacy system, which means, among other things, that an attacker gaining root privileges still has very limited access to the system. With the old system, any sort of privilege escalation and its game over. That granularity means that there are a lot more things to twiddle, and a lot of thinking about what gets in the way and what doesn't.

Fedora bit the bullet back in FC3 (seems like ages ago), and finally by FC6 it had reached the point where it could be fully turned on and not be constantly getting in the way.

The thing about SELinux is that the compromise between useability and effectiveness isn't quite as stark as it is with the old UID system. You can have the system configured to be quite restrictive, and never notice that those restrictions are there. Getting all the policies set that way is no small project, however.

Of course you could turn it on with Ubuntu, but you would spend months, if not years, getting it configured so it actually provided protection while not raising it's ugly head every time you tried to do something. Red Hat has spent three or four years sorting out all those settings, and the default settings for Fedora are now pretty good.

Late flash - I found some other Ubuntu repository, and theere are a lot
of Ham Radio Apps there. I've installed a few, and so far so good.

IMHO the circle game is complete.

I recall an article in QST (March 1964) where, by using
the right key sequences, a 60 wpm RTTY machine
could be made to send Morse Code. This was
particularly useful because in those days amateurs
using RTTY had to ID in Morse Code.

A few years later came the first CW keyboards,
which permitted someone with no Morse Code
sending skills to generate near-perfect Morse Code.

Now we have a rig that will permit a person with
no typing skills to send perfect RTTY or PSK31.

Another neat RTTY trick involved paper tape.

By using certain sequences of letters, the holes in
the paper tape could be made to form letters and numbers.
What was printed on the page looked like gibberish-with-a-pattern
but if you looked at the tape the message was clear.

Of course since it took several characters to make one letter, the
effective speed on a 60 wpm machine was about 15-20 wpm. And
there was no going back if you made a mistake. But the effect could
be impressive to the uninitiated.

"Trick?" TTY p-tape was standard practice among the big guns
in communications of the 1940s. Back then it was 60 WPM on
a 24/7 basis...just keep them fed with paper, ink, and once in a
while, some lubricant. Teletype Corporation made a fine piece
of goods.

>Of course since it took several characters to make one letter, the
>effective speed on a 60 wpm machine was about 15-20 wpm. And

TTY p-tape makes it possible to do an immediate re-send of the
SAME message if a wire or radio circuit is blitzed by something.
During WWII and afterwards it was the standard way at big hubs
of networks that spread around the globe...be they military or
commercial, the 'torn tape relay' rooms were big and efficient.

>...remembering the smell of hot machine oil in the W3ABT room...

I can easily remember an entire second floor at ADA's control
center tape relay room of the early 1950s. Over 200 teleprinter
machines busy working away 24/7. Impressive all by itself. And
that was only the third-largest hub (RUAP) in the Army network
then.

I must agree. My new laptop is no slouch, but at times I felt that I was operating with a 286 machine under Vista. My average time from boot to actually doing something was as much as 30 minutes, as all the programs accessed the web, looking for updates, and many of them crashed. At least

half the time, I have to hard kill the machine to turn it off. This is the fifth laptop I've tried with Vista. None have actually worked.

During Field day this year, we had tried to use N3FJP's software for networked logging with Vista. It failed most spectacularly (Vista failed,

the logging software itself works wonderfully on XP machines. Apparently Vista occasionally "loses" an IP address, and the cure is to reboot. Not a very good situation in the middle of a multi station logging effort.

My laptop has performed flawlessly since the OS change.

The Ubuntu repositories have a lot of apps, There are Ham specific ones, such as loggers, digital mode software (linux even has AMTOR/PACTOR transmitting software) there are antenna modeling programs, even a Smith chart program. Lots of developer apps too.

There are quite a few electronic apps, such as transmission line calculators, and a whole lot of other stuff that I am just finding out about. More Hams need to check it out - I think the whole Operating system is in line with "Ham Spirit".

> Congrats on the new call!

Thanks. I was toying around, not too serious, looking for something a
little shorter, and found this one. I like it both for Morse and Voice.

And N5EE was taken already, hehe

Well I don't really care for Ubuntu myself, but I can see where folks would like it. Personally I dislike it because it goes to great lengths to isolate you from the Unix stuff, most notable is that you cannot log into the "root" account from the GUI. Of course that's not usually a good idea, but there are times when it just makes sense to be "root" on a box.

For the folks that don't want to care about the Unix stuff, Ubuntu does a good job of hiding a lot of that. It also has a "run from the CD" mode that's kind of nice. You can run it without installing anything and see what you think. If you don't like it, just take the CD out.

Where do you find the HAM stuff though? I've got a Ubuntu install that I play with and I'd like to see what's built for it.

Did you mean "K2" or "K3"? I have a K2 and at least one other
regular here does too. Great rigs. I've used the KX1 and K1 as well.

> but at Dayton next year I'm going to haunt the Elecraft booth.

You and a lot of others...

Elecraft has shipped a few dozen K3s so far. The first two production
runs sold out long ago, if you order now, expect
a few weeks' wait as they catch up on backlog. Some reviews
have started to appear on the 'net, and eventually there will be
QST and Sherwood measurements of the truly amazing numbers.

I worked a couple of stations using K3s in CW SS last weekend, so they
are on the air.

>From the descriptions, assembling a K3 is more like building a PC than
it is assembling a Heathkit. The boards and modules are all
preassembled; you simply put it together and configure it. Which is
not a trivial job!

And like a PC, you have a choice of which options to add to the basic
unit. Options can be added at initial build or later. This helps keep
the price down - if you don't need things like general coverage
receive or a second receiver, you don't have to pay for them.

I don't work for Elecraft and my only interest is as a stisfied
customer and builder.

The Fedora project just announced a "spin" of Fedora called "Fedora Electronic Lab". This is a live CD loaded up with electronics stuff. Fedora includes a set of LiveCD tools to encourage custom spins. So far no ham app spin, tho.

The problem with these Live CDs is that you still need to have a bit of Linux savvy if you want to use the Live CD and save some data. It isn't hard, but if you are using the Live CD to try out some Linux distro that can be a pretty big barrier to fully enjoying it.

One of my former staffers and still friends, Bob Weller, picked up the
call N6NE about 20 years ago. Bob spent 9 years with the FCC, then
went to the private sector as a broadcast engineering consultant, and
this week returned to the FCC as the RadHaz specialist. AFAIK he's
still a CW contester, hence the short call.

Under Symantec, you can open up some extra repositories. I think theere
is one more standard Ubuntu repository, and a "universal" one. There are
both finished apps and various engines for developers. There are a
couple more repositories that have proprietary drives also.

When I started studying for the Advanced or maybe it was the Extra class exam I was somewhat intimidated by the section on imaginary numbers, J operator, etc.
I studied it in college to get my electronics degree but that was quite a while ago.
My first thought was I can just guess at these questions and if I miss them all I will still pass the test.
Then I decided to just memorize the (Radio Shack) study material, not the formulas or the math to solve the problem.
I passed first try.

Hi, I'm learning CW, and so far have not been able to tune in the Arrl practice frequencies. I have only a 10 meter wire antenna, and I'm wondering if there is anyone here from the southern New England area that knows CW that wouldn't mind some practice on the 10 meter tech sub-band. Fair warning, I'm not up to 5 wpm yet. :)
I am usally on the air around 7pm.

Jim,

Please tell us your callsign and grid square: at this point in the
sunspot cycle, ten meters isn't going to get much further than a CB set.

There are also other options you can pursue:

1. Use a computer and download one of several Morse study
programs. I found them indispensable for learing the
code, especially since they allow you to make custom
lists of the characters you're having trouble with.

2. If you have VHF gear, you can set up schedules with
local hams to do MCW on simplex or even with a
cooperative repeater.

3. If all else fails, you can build a modem adapter that
will allow you to practice with a friend via tele-
phone line.

Hi Bill, my call sign is kb1odg, and according to the Arrl web site (I
don't have a grid map at the moment), my grid square is FN41.
I've been using a program called "Just Learn Morse Code" and it has
helped with copying code, but now I'm looking for software that can

"receive" code sent by a key.

In my search I came across this link, Arrl has made mp3 practice recordings.
http://www.arrl.org/w1aw/morse.html

I did another search for MCW and came across this link: a schematic for building an MCW oscillator
http://www.geocities.com/SiliconValley/2775/mcwosc1.html

I have a 2 meter HT, but it is only FM. I have not yet heard any morse code in FM, except for repeater call signs. Does anyone do morse code in FM on 2 meters?

Jim

1863. Audio examples of RFI

Newsgroup: rec.radio.amateur.moderated

From: Steve Bonine <spb@pobox.com>
Message-ID: <13jk8as6m2psea0@news.supernews.com>
Source record: 3571

Some months ago, I happened across a web site which contained short audio clips of various interesting sources of RF interference (MP3 files or a similar format). I remember a furnace, an electric blanket, and common stuff like arcing power lines and ignition noise. I should have known to grab the files and keep them local.

I went looking for the site again so that I could use these files as examples in the class I'm teaching, and can't find the site. I suspect it's now gone. Did anyone snag any of these examples, or point me to a source?

Thanks. 73, Steve KB9X

"Wishing won't make it so!"

The monitoring stations used to call that "shooting fish in a barrel"
back in the days when they did spectrum cruising (proactive
enforcement).

My suggestion is to forget 10M, FM and VHF and get yourself some sort of HF radio which can directly tunes the 80M W1AW code practice sessions which should really boom your neighborhood. They're out there for much less than the cost of another HT. This one is only a hundred bucks brand new:

http://www.mfjenterprises.com/products.php?prodid=MFJ-9380K.

And you could use it to run CW on 80 after you've become a General and if you haven't been there yet it'll also introduce you to the wonderful world of ham radio solder smoke. Another affordable route to HF gear is the vast used equipment market.

I can vouch for the effectiveness of the 80M W1AW code practice sessions which took me from zip to 25WPM and beyond "back when".

To what is that 10 meter wire antenna connected? If it's a regular old HF transceiver (typically 160m - 10m) then you can use that 10 meter wire antenna to receive on 80 meters... and you should be able to hear W1AW on it. ?

BTW, I'm glad you're wanting to learn CW!

Jim we have sent morse code practice on our 2M repeater (or simplex) The repeater code practice was a net and sanctioned by the repeater club and scheduled. Or use an infrequently used simplex frequency.

You need a CPO (Code Practice Oscillator) just key up the HT and place the CPO speaker next to the HT mic. Use the CPO to generate code audio. This audio modulates the FM transmitter.

Or have a computer program that sends code (by list or keyboard) place HT mic near the computer speaker.

When transmitting on the air 2M, be sure to ID your call every 10 minutes and a short voice announcement of what you are doing. Works well. Don't use a repeater for code practice without permission from the repeater club, best use an infrequently used simplex frequency e.g. 147.555 MHz NOT 146.520 MHz the National Simplex Freq)

Since code requirement has been dropped from the exams, we have discontinued the code practice nets.

Re ARRL code practice -- problem here is they send at various speeds - so you have to wait for transmissions you can copy and practice. Why not just get a computer program. See URL:

http://ac6v.com/morseprograms.htm

Another problem is two newbies probably send pretty sloppy code- not the way to learn receiving.

Good luck with the code.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation | decisions in the newsgroup itself are also not permitted, as stated in | our original newsgroup charter. Please direct any such critical | feedback to our administrative contact address at the bottom of this | article, where it will be carefully considered by an appeals team of | moderators. This team is distinct from the initial team of moderators | that approves or disapproves article submissions, and thus can provide | independent oversight of moderation decisions. |

Similarly, if you see an obviously inappropriate article in our | newsgroup, please assume that it was a mistake or a direct forgery. The | moderation team makes every effort to protect the newsgroup from such | incidents, but they do happen, albeit rarely. You may also submit | feedback to the same address regarding such articles in our newsgroup, | but it is likely that our monitoring software and procedures have | already detected it, and we are actively handling the problem. Please | resist "piling on" with followups to the newsgroup when these incidents | occur, so that we don't have to reject such articles. |

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

> So are they just discharged? Can you recharge them?
> Or are they destroyed? Were the radios affected?

Just discharged. The radios are OK.

I have never noticed any names on the "x-ray" equipment. I should imagine thats the sort of detail they will keep to themselves. Giving the specs away would make it easier for the "bad guys" to figure out how to beat the scan.

1875. "Nobody Builds Anymore"?

Occasionally, I see comments/complaints that "nobody builds anymore"
or that "you can't homebrew really good equipment" etc.

Apparently this amateur hasn't gotten the word:

Those of you with high-end antenna systems: are you hearing DX from stateside? Are you working DX from stateside? On what freqs. and what UTC times? I know the current solar cycle is at almost rock-bottom but wonder if having high-end antennas make a difference as I read an article in QST by the Force 12 CEO that it did help when he connected an unused antenna at TWR in Bonaire to their HF rigs. He said it was like turning a light on in a dark room. The bands came "alive." If propagation is at an all-time low right now, how is that possible?

Too often! I don't really think it is correct either. I look around my shack and garage and most of my stuff is homebrew. My entire hobby is more about making things than it is operating. I haven't built my own Xceiver yet tho'.

Same here! And what isn't homebrew was usually assembled from a kit,
converted from surplus or restored from 'basket case' condition.

Google my call to see the shack...

> My entire hobby is more
> about making things than it is operating.

I do both, though I lean more to operating.

>I haven't built my own > Xceiver

I've built three from scratch and restored/assembled several others.

Top drawer! Definitely not a project for a beginner but it shows what
can be done.

It will be interesting to see if full schematics, and PCB layouts are
available, and if certain parts can be obtained (like crystal
filters).

As I opined in my 'invisible' posting: It looks like a very nice pre-
production prototype. Production versions would be about $3K each
or so.

In addition: Cornell Drentea has an interesting AOL home page. Over
35 years as a pro in the RF business. One should be able to believe
his specifications.

Some more observations....

The designer/builder/author is KW7CD, whose website has lots of interesting stuff. 50 years a ham, author of many books and articles, holder of several patents, and much more.

The rig looks like really good homebrew craftsmanship. Would love to see inside - hope that's in a future issue.

One thing I found interesting was the rated power consumption. when AC powered. 200 VA receive, 800 VA on full-power transmit! Possibly a switching supply with low power factor?

The logical comparison to make is with the Elecraft K3. A K3/100 with general coverage receive, TCXO and four optional filters is less than $2450 (without power supply). I'll leave it to others to compare numbers and features.

It's *easier* to work DX with high-end antennas, but it's *possible*
without them. I've been away from my station for a week, but worked about
a dozen DX stations on 20m CW while I was gone, working from the mobile.
I also frequently work DX on 40m CW and have worked some on SSB on both
bands. (in both cases from the mobile)

I would say 40 and 20 are your best bets. 40 during hours of darkness -
roughly until midnight being your best bet. (because sunrise in Europe is
a bit after that and while you'll still have propagation, most of the
DX stations available to work won't) 20 is best in the morning (from
sunrise to about 10am or so) and in the evening. (say, 4pm-sunset)

But don't write off 15 or 10 meters. They *do* open, even now. Try
especially during DX contests. There's an all-band contest on CW next
weekend, and the ARRL 10-Meter Contest (both phone and CW) in December.

And, of course, the WARC bands. 12 may be rather spotty (but not
completely dead). 17 is open most days. 30 is open *every* day though
sometimes only domestically.

Try non-voice modes. Used to be CW was by far your best bet for DXing
with limited antennas. CW still works a LOT better than phone when you
don't have the biggest signal in the world. PSK31 has become VERY popular
and it's quite easy to work DX on that mode - nearly as easy as on CW and
sometimes with even less power.

Wow, an accomplished fellow for sure. On his home page I can see one big difference between him and me. He apparently could put the stuff he tore apart back together at the age of six. It took me until around 15 to do that. I was grounded a lot as a kid until my grandfather started shipping old radios that I was supposed to take apart. ;^)

Well a lot more than one big difference......

I repaired my first radio at the age of 9. It was a desktop Philco
with Standard Broadcast :-) and Short Wave. I used it all thru my
youth to listen to the likes of "The Lone Ranger", "The Shadow",
"Your's Truly, Johnny Dollar" and "Big John and Sparky". I just
collected it from my parents house. You know what, that same component
has gone bad. You just can't get quality, I guess. That electrolytic
only lasted 48 years. Wonder where I can find another one so I can
fix it again. :-)

Mike, that lab bench shot looked perfectly normal to me. It's obviously in the breadboard stage then and that's been the way its been in the industry for over 40 years and on thousands of ham benches, too! :-)

Look to me that Cornell was just being honest about it all. :-)

IMHO, having read Mr. Drentea's CV, I would not characterize him as an
amateur.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet |
newsgroups is the RadioBanter site: |

http://www.radiobanter.com |

sponsored by the NewsgroupBanter project: |

http://www.newsgroupbanter.com |

It, too, supports both reading and posting. |

-- Will the material appearing in rec.radio.info be archived somewhere? |

Yes. See Google Groups and RadioBanter above. |

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

1890. Looking for PSK31 advice

Newsgroup: rec.radio.amateur.moderated
Date: 2007-11-24 06:52:49 UTC
From: Jack VK2CJC <vk2cjc@look-me-up-at-qrz.com>
Message-ID: <fi8fth$g8k$1@victor.killfile.org>
Source record: 3598

Hi Folks

I discovered PSK31 just before the sunspots faded out. I bought an interface and worked QRP on 14.070MHz. Had a really good time too, its a fantastic mode, especially for QRP and those who cant fit yagis into the homestead (like me).

But a quick question to those more familiar with data modes.

If I connect the interface to my desktop computer, it receives well, but I cant get clear transmit. It sends full scale white noise no matter how I adjust the mic gain or audio levels. If I connect up the laptop, same TX noise problem .... until I unplug the mains charger and run on batteries. Then its perfect.

My laptop batteries last about 2 hours there days, so I'm limited to 2 hour long operation until I sort the problem or get a higher capacity battery.

Any thoughts what's causing it?

cheers

Jack,

The first thing to check is that the interface is FULLY isolated.
Surprisingly, some commercial interfaces use isolation transformers on
only the RX line. Also, not all use fully isolated keying. Check the
manual, or disconnect all the computer inputs to the interface, and
then check with a meter between the interface case and the rig. Should
NOT read a DC short. (Or probably with the laptop connected without
the mains, check between a metal point on the laptop and the rig.
Haven't tried this, but it should work the same.)

If you find a DC ground, it can be easily fixed with an inexpensive
600 ohm audio transformer. The PTT is a little harder, but not much.

> Jack,
>
> The first thing to check is that the interface is FULLY isolated.

I don't agree. If the problem was in the interface, it would work equally badly with the desktop, laptop, or laptop on batteries. The thing that Jack did to resolve the problem was to disconnect the power supply from his laptop. This implies to me that the issue is RF getting into the computer via the AC power line. Or in the case of the laptop, it could be that the RF is getting into the system because the cable between the power supply and the laptop is acting as an antenna.

That's the aspect that I would work on. It sounds to me like RF is getting into the computers. When the laptop is running on battery, it's sufficiently shielded so that it's able to operate. If the desktop has a metal case, it might be that bypassing the AC feed would help. Shielding the cable between the laptop's AC supply and the laptop might help. Even moving the physical location of the various components may help.

One of the things that tends to poke a hole in this whole theory is the fact that Alan is running QRP. If there were a lot of RF floating around the shack, my idea would make more sense. On the other hand, computer equipment is remarkably sensitive to RF at specific frequencies, and Murphy suggests that that's where you're operating . . .

One has to start somewhere, and the presence of ground loops can, and have, resulted in RF and not just audio problems. FWIW.

The whole concept of grounding is probably fertile ground for
investigation for this problem.

Thanks for the input guys.

I am using a Buxcomm rascal interface (I had forgotten the make, but have been reminded since), which apparently has excellent isolation.

The problem occurs equally on all HF bands, so is not really frequency specific.

If its a stray RF problem, which I am very willing to accept, I'm surprised that it effects two very differently designed computers in exactly the same way.

This is a FAQ in the audio world. It is a very common problem
with getting audio into and out of laptops. Their "brick" power
supplies are notoriously noisy. At AF frequencies, and likely RF,
as well. In the audio world, we use full transformer isolation in
and out. (Or else use an inexpensive USB-powered audio interface.
Likely cheaper than trying to isolate the PSK31 interface.)

Not the CPU's fault. It is almost guaranteed to be the "brick"
power supply. Note that the problem goes away when you
disconnect the "brick" and run on the internal battery supply.

I bought a used "brick" power supply for this Dell laptop on
eBay and it came with an intermittent (3-pin U-ground) mains
power plug. So I chopped it off and replaced it with an after-
market, 2-prong plug and I don't have problems with ground
loops and RFI from the garbage power supply anymore.

Yeah, yeah, green-wire "protective ground", etc. etc. Well,
I don't see what exactly the "protection" here is doing, and
if the green-wire ground WAS supposed to be there for RFI
shielding purposes, then why does it *go away* when I
disconnect the green-wire ground? Riddle me that! :-)

Well it will be double insulated so doesn't really need an earth at all.
I'm surprised there was one.

Jack

The green wire isn't there for RFI purposes. At least not primarily.

It's there mostly for safety purposes. In case something fails inside
the power supply, the system cannot become hot-to-ground.

RFI prevention is secondary.

RE the misbehaving unit:

Jack, you probably have a number of problems going on, so I'll outline some things you can try, and try them one at a time, so you can troubleshoot which one might cure the problem. Some you may already have done.

Pull the audio out cable from the laptop and have a listen to the signal while transmitting both with and without the power supply attached. Sound okay - the same- both times?

Get the computer and transmitter on the same mains line.

Isolate, isolate, Can you get a line isolator on that power supply, or possibly make up a cable to run the laptop off a good power supply?

I don't know how the power plugs are in your QTH, but if you are 2 pronged no neutral, you can try reversing the plug on the Power supply.

This probably isn't the problem, but some clip on ferrites on the DC end of the power supply can't hurt.

Can you try another laptop PS?

Just out of curiosity, does this happen when the batteries are removed from the radio also? Try carrying the batteries in a separate battery holder next time and see if they suffer the same fate.

OM's

visiting the group i read that Antique Modulation is out
Of course there will be a reason use of bandwith?
However there are groups of OM that are interested in W.O. 2 equipments and
even shipradio
They may not use their Rigs anymore?
Only because young newcomers dont understand history and can not tune with
their modern SSB rig
19 sets or ARNC s old aircraft sets like TR 2200 wil be forbidden
We are also amateurs who love a part of the hobby

The band plan is merely a suggestion for use in those countries that have
not developed their own band plans. It does not ban AM voice. In those
countries that already have band plans such as the US, Canada, etc, it does
NOT supersede them.

1905. Grounding my HF radio equipment

Newsgroup: rec.radio.amateur.moderated
Date: 2007-11-27 20:56:19 UTC
From: James Barrett <xucaen@gmail.com>
Message-ID: <778a8912-e7b5-4642-8ef2-df847fd43ffe@y20g2000hsy.googlegroups.com>
Source record: 3514

Hi, I did some searches on google for grounding, but all the information I have found talks about grounding antennas and such against lightning strikes. But the grounding I am interested in researching is the type of ground I would use on my HF radio, power supply, and antenna tuner. I haven't grounded anything yet, but I would like to. I seem to have a hazy recollection of reading somewhere that I should use copper braid and connect it to the house ground. But during my search I found this image (which basically sums up the article it came from) http://www.qsl.net/n5nj/kuby/image16.gif

Does it really matter if my equipment is ground to the house ground or should it really be connected to its own external ground? And if/when I ground to guard against lightning strikes, would I use that same external ground or go with yet another external ground?

I'm still doing my research, but figured it couldn't hurt to ask.

Thanks!

Jim

Jim,

You'll see numerous references on the web to "single point ground." It is very, very important stuff. I got nailed on this stuff back in August, 2003. Here's how it played out:

We had a violent thunderstorm early one morning about 7 A.M. Suddenly there were three near strikes (simultaneous lightning and thunder) within a ten second time frame. In addition to telephones, computers and home entertainment equipment, my four month old Ten-Tec Orion and numberous shack accessories were zapped. My house ground is a single 8 foot copper plated ground rod. The lightning ground for the shack was an identical ground rod driven about thirty feet away from the house ground.

When the strikes conducted a surge into my home via the power lines, all three wires had very high voltage on them. The shack ground was still at its usual potential (0). The house ground was elevated to high voltage. There was a potential difference between the shack ground the the house ground. That potential quickly equalized inside my equipment.

Ten-Tec reported that six boards inside the Orion had their ground traces evaporated.

For a shack ground, you want the shortest possible distance between your rig and earth. The house ground will be as close as possible to your electrical service entrance. If, like me, you have to use two ground rods, you need to bond the two of them together with a big, fat wire so that the two can never be at different potentials.

If you have a tower, I'll assume that you have at least one 8 foot ground rod driven at its base. Bond your coaxial cable sheaths to the rod at the tower. The sheaths should also be bonded to your shack ground.

Hi James,

There are several good articles at the www.eham site on this very subject.
If you can read between the lines of some of the muck slinging, you can come
up with several really good solutions.

Just click on the "view more articles" link [at the top of the horizontal
green separator] HTH.

There are two grounds for your radio system. There is an RF ground, and
there is a power ground. They aren't the same, and even the term
"ground" is a little nebulous. But it is convention.

Dealing with the Power ground, you'll want to tie the grounds on the
back of your radios/tuners/amplifiers together. There are a number of
ways to do this. Some folks construct a copper ground plane that has
wires running to it from the equipment needing grounded.

Another possibility is wiring to the grounding bars such as are used for
electrical service. This is the method I use.

Whatever method used, short wires are better working practice.

I'll just go over my own setup as beyond the grounding bar, you'll get a lot of opinions on what is right. I run heavy gauge wire out to a 8 foot copper pipe embedded about 7.5 feet into the ground, and have ground clamps to attach it. Braid is good too.

Some other thoughts:

I install the pipe hydrostatically - I sweat a garden hose adapter onto the copper pipe, attach a hose to it, and let 'er rip (hopefully no disclaimers needed here) The water digs a hole for the pipe, which then sinks into it. It's fun

some folks ground to a water pipe. Not a good idea, as modern plumbing does not always have continuity - there might be a piece of PVC in the line somewhere.

I have my Arrester going to that pipe also. I'm using a "spark gap" type arrester, but I would really recommend one of the gas discharge types. They are quick to respond, and better protection in general.

Hope this helps.

This whole topic area seems to be eternally confused and confusing and
I'm in the parade of the confused. On a common sense basis I
absolutely agree with your connecting the station grounds to the
'lectric service entrance ground for the reasons you've stated.

But somewhere along the line somebody in the ham groups stated that
the National Electrical Code states that there shall be one and *only

one* grounding point per power drop and the neighborhood code cops and
the insurance companies reportedly get stiff about it.

So is it legal to connect a phalanx of ham station ground rods to the
service entrance ground?? Or not.

As I understand it, according to the NEC, you must have only one
grounding *system* per building. This system may include two or more
ground rods, and/or a bare grounding wire buried in a trench around
the outside of the building. The ground rods and wires must be
securely bonded together with heavy-gauge wire... that's what ensures
that it's all one grounding "system".

What's dangerous is, as has been suggested, having separate grounding
rods (or grounding subsystems) which aren't well-bonded together. If
you connect any electrical apparatus to two such grounding points
(e.g. ham radio with a third-prong ground on its line cord, which is
also tied to a separate ground rod via the coax feedline), and a
lightning strike or a hot-to-ground fault occurs, your electrical
apparatus and its wiring can end up carrying a lot of current between
the ground points, thus creating a shock or fire hazard.

The bonding wires create a low-impedance path for such fault currents,
minimizing the voltage differential which exists between the ground
rods and thus helping keep down the flow of fault current through
undesired paths (e.g. your ham rig).

The is probably the biggest point of confusion for me. What do you mean by "RF ground"? The type of ground I was asking about is the ground terminal on the back of my radio,not the three prong power plug. There is the ground terminal on the back of my radio and there is also a ground terminal on my power supply, even though both have three prong power plugs. So, are the ground terminals on the back of my radio and power supply called RF ground, or are the called Power ground? Because I thought that the power ground was the three prong plug.

Jim

>thought that the power ground was the three prong plug.

The intent of the third prong on the power plug is to provide a safe path from the equipment chassis, back to the power panel (where the neutral and hot are bonded together). This ensures that if there's a fault inside the equipment, and a "hot" wire touches the chassis, the stray current will immediately flow back to the panel via this ground connection (and likely cause a fuse to blow or a breaker to trip very quickly). It ensures that you don't end up with a chassis which is "hot", and isolated from ground... just waiting for somebody to touch it, accidentally complete a path to ground via their body, and get themselves mildly dead.

The intent of the ground terminal on the back of the radio is to let you tie the radio chassis to a good RF ground, so that if any RF reaches the chassis via conduction (e.g. coming back down the feedline) it doesn't leave you with a chassis which is RF-hot compared to grounded objects nearby (this could cause an RF burn if you touch the chassis, or sneak back into the microphone wiring and cause weird squawking sounds when you transmit). It's also necessary if you plan to use a random-wire or similar unbalanced antenna which is designed to work against the station ground (e.g. radials or counterpoises).

It's normally the practice to bond *all* of the equipment in your shack together with good (short, heavy) grounding wire or braid... once again, ensuring that different pieces of equipment have their chassis at the same (or nearly the same) AC and RF potential. By doing so, you are in effect bonding together your power/safety ground, and your station RF ground, creating a single ground system.

Because this in-the-station ground bonding isn't really designed to handle massive amounts of fault current (e.g. from lighting) and since it's in an area where you really don't want such fault current to flow (e.g. your shack), it's still important to bond your station's "RF ground" rod, and your house's service-panel ground rod, together as per NEC.

It is confusing, so you're not alone.

RF grounds can be related to Power grounds, but only so far. On say a ground plane antenna, where you have a vertical center rod connected to the coax center conductor, and some angled rods connected to the coax shield, those angled rods are serving as a ground plane. They aren't connected to actual earth.

This is where a lot of the confusion comes in. The ground plane is more of a counterpoise, or to look at it as a circuit, a place for the other part of the current to go.

Now if we look at say a vertical HF antenna of the 1/4 wave variety, typically this antenna will have "grounding" by way of many radial lengths of wire that are either buried in the earth at a shallow depth, or even just stapled to the surface of the earth.

This is "Kind of-sort of" like a power ground, in that it is in the earth, but its doing something different. It is operating very similarly to that ground plane. It gives the RF current a place to go.

I didn't go into things like impedence to avoid confusing the issue, but that would be next in the discussion.

The type of ground I was asking about is the ground
> terminal on the back of my radio,not the three prong power plug. There

The ground terminals on your equipment are part of the power ground, that you would attach to the pipe in the yard. Explanation of that below. Any RF ground would be considered to be on the shield of the coax connectors.

> Because I
> thought that the power ground was the three prong plug.

Yes, generally. One of the reasons that we put in a separate ground rod from house ground for a power ground is that there can be currents on it after going around the house. It's still mostly neutral, but with hundreds of feet of that green wire running around the house, you can still get some currents.

Some people can "get away with" not having a station power ground. Kinda. I highly recommend one especially for some place to send your lightning protection.

One of the reasons that Ground fault interrupters are around. If you have a hundred feet or even more of neutral wire going back to that panel, you can still get an appreciable current flowing through you without tripping a breaker. I've had my tookus saved by one of those GFCI things when a power tool failed in the manner you just described. I felt the shock for just a fraction of a second, then it tripped.

> the chassis, or sneak back into the microphone wiring and cause weird

Ahh, that happens to me all the time even without RF on the mic! ;^)

There is a whole lot of misinformation regarding grounding. An interesting mental exercise is taking a tower say 50 feet from your house. According to some, in order to comply with NEC, the tower has to be grounded by sending a lead back to the house to that single ground point. I guess they want to insulate the tower base from ground - no ufer's here, thanks. Sounds like a disaster waiting to happen.

The good folks at Polyphaser have some excellent Technical notes. Kept me busy a long time reading the stuff:

http://www.polyphaser.com/technical_notes.aspx

Of particular interest is Ham Radio Station Protection:

http://tinyurl.com/2aymw9 (tinyurl needed - its a long one)

It is largely about lightning protection, but has good stuff pertaining to grounding.

. . . . . .

Makes complete sense and answers my basic question. Thank you David.

I have five 8' ground rods already installed with more coming. All of
them will be bonded together with about 100' of #8 bare solid copper.

Let's try one more: This place is a "This Old House" type abode. There
is no basement and no visible service entrance ground rod. There's a
tight dirt crawl space under the place which I'm not about to even try
to wiggle and squirm through to find the power wiring ground
connection. If there is a ground it's the 3/4" copper water supply
line from the street which pops up somewhere in the crawl space per
normal practice in days of yore around here. I know for a fact that
it's an old ~80' 100% copper line, not plastic. On the other hand the
service entrance panel box is quite accessible. Would it be OK if I
connected my ham grounding system to the neutral/ground bus in the
panel box instead of to the water line??

the NEC refering only to the household AC wring(soon hopefully to DC circuts

at least according to the local electrical inspector

our system for RF are another affair all together

the inspector also aprooves the use if desired of seperate eletectal ground
when service of more than one voltage and/ot freq is ainvolved

in my case I have a houshold from the ower company enterance a seprate
gorund for my various solar and wind systems 12-48 v DCdepending on the
location plus the seperate Ground from my station

most inspector in my experence would rather our rf system were not grounded
in to the mais ground since they don't uderstand RF at all

Of course.

Over the years I've dealt with a grand total of two lightning "events". I had a 70' 45G tower with a monster mast which was topped by a homebrewed clone of a 2M Ringo Ranger which went to 90+ feet. Lightning magnet. There was one ground rod alongside the concrete base which was bonded (clamped and silver soldered) to the tower by a 1/8" x 1/2" copper strap.

There were three runs of coax, a run of shielded rotator cable and an unshielded run of 14/3 Romex up the tower with all shields and the Romex ground bonded to the tower. All the radio gear in the basement shack was grounded to the water line which was ~25' from the radios. Not slick by today's standards.

Along came the first hit and my whole world turned "bright electric blue". Power line/brown underwear hit. The thunder was still rumbling loudly so I scrambled behind the gear and furiously got into yanking plugs out of outlets when *bang* another hit . .

In the end there was all kinds of damage to the house wiring, TV sets and kitchen appliances toasted, second floor wall outlets atomized, etc. The only damage in the "radio room" was to the two vaporized disc ceramic AC line bypass caps in the 75A4.

>From this experience I learned that (a) lightning certainly can strike the same place twice in rapid succession and that (b) lightning can choose to hit power lines which are 30-40 feet *below* mongo grounded objects like a towers which makes no sense at all and (c) there are no manmade "cures" for lightning. Except maybe paid-up insurance coverage and prayer . .

Source record: 3532

Based on the period of 3 March 2007 to 3 December 2007, the US amateur radio individual licensee totals have changed as follows:

New: 20,901 Expired: 19,739

Compared to an averaged 9 month period prior to 3 March 2007:*

New: 16,957 Expired: 21,822

The total number of individual licensees was 711,175 on 3 Mar 07 and that changed to 711,892 on 3 Dec 07 for a net gain of 717 in nine months. That is a 0.1% growth rate.

* Prior 12 month period total changes divided by 12, then multiplied by 9 to approximate a 9-month averaged period for comparison.

In short, nothing much has happened to numbers, no significant changes either way. Class changes are another matter. All data obtained from www.hamdata.com FCC Information page.

There are those who think it's not sporting, but ftp clusters, such as K3LR offer "up to the minute" DX as it is spotted on the bands. Go to ac6v.com to find a nearby cluster, as well as info on how to customize them for your geographic area.

I've had moderate results with 125 watts and a 70-foot-long end fed "zepp" antenna by using the 75-meter SSB DX "window" at 3790-3800 kHz. Usually good for insomniacs, as the Europeans wake up at 1-2 AM CST. DX comes through very close to 3500 KHz, too.

DX contests, such as the recent CQWW, bring them out of the woodwork. I heard tons of European and African stns on 80 during the CW contest. Never heard them there before, but I'll check the contest calendars from now on... Good Luck!

1925. Followup on my Tech class

Newsgroup: rec.radio.amateur.moderated
Date: 2007-12-04 14:35:33 UTC
From: Steve Bonine <spb@pobox.com>
Message-ID: <13lapcvertvbacf@news.supernews.com>
Source record: 3534

I was going to followup to the original article that I posted on October 22 <13hpelos43h30b5@news.supernews.com> but I no longer have it locally. In that article I asked for advice on teaching an entry-level ham radio class, and the resulting thread was a big help. I appreciate the comments. Here's a short status on how things went.

The class consisted of six sessions held on Tuesdays and Thursdays, so it lasted three weeks. The last session was the Thursday before Thanksgiving, so we took that week off, then the students asked for a review session the Tuesday after Thanksgiving before the exam, which was Thursday, November 29.

Five new hams came out of the exam session, plus one upgrade from the local ham population (General to Extra). Seven people took the test, so two didn't make it. Of the two, one of them missed by only one question so he decided to try it again that night; the second attempt didn't work for him either.

Here's the real shocker for me: The VE team mailed the package back to the ARRL on Friday (11/30). The calls were in the FCC database yesterday (12/3). The ARRL couldn't have received the forms before yesterday, so that means that on the same day that the paperwork reached the ARRL the calls were issued. I went to the FCC website yesterday just to be sure that I remembered how to do a search by name and was astounded when the entries for these new hams showed up. That's impressive.

Other comments: I liked the format of six 2-hour sessions. The students also expressed their approval, but that's not too useful since they tend to be self-selected; only people who can fit six sessions into their schedule were there. I found that I could cover two of the sub-elements from the pool in a bit over two hours and had time to present general background information and also go over the specific pool questions.

I was reasonably satisfied with how the presentation broke out in terms of covering concepts and reviewing specific pool questions. We had time to do both, and I felt that both were valuable to the students.

All in all, I found it to be a rewarding experience for me, and the look on the face of one of the students when she was informed that she had passed the test was, as they say on the TV commercials, priceless. Now the next step is to get these new hams on the air.

Thanks for the followup report. Do you have an outline or
teacher's notes that you could share with others who want
to do a similar project?

1927. November 2007 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-12-04 18:46:42 UTC
From: N2EY@aol.com
Message-ID: <d8af6b35-7dc8-486d-a3d1-6dc165acd4f3@a35g2000prf.googlegroups.com>
Source record: 3536

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of November 1, 2007:

Novice - 20,916 (3.2%)
Technician - 291,761 (44.5%)
Technician Plus - 22,806 (3.5%)
General - 142,680 (21.7%)
Advanced - 66,117 (10.1%)
Extra - 111,736 (17.0%)

Total Tech/TechPlus - 314,567 (48.0%)

Total all classes - 656,016

As of November 12, 2007:

Novice - 20,789 (3.2%)
Technician - 292,048 (44.6%)
Technician Plus - 22,322 (3.4%)
General - 141,496 (21.7%)
Advanced - 65,898 (10.1%)
Extra - 111,733 (17.1%)

Total Tech/TechPlus - 314,370 (48.0%)

Total all classes - 655,286

As of November 25, 2007:

Novice - 20,666 (3.2%)
Technician - 292,686 (44.7%)
Technician Plus - 21,874 (3.3%)
General - 142,450 (21.7%)
Advanced - 65,698 (10.0%)
Extra - 111,760 (17.1%)

Total Tech/TechPlus - 314,560 (48.0%)

Total all classes - 655,134

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042

General - increase of 17,461
Advanced - decrease of 30,732

All the materials that I used in the class are available at
http://www.beebear.com/RadioClass/

I quickly admit that there is very little original material there. I
used material that is available on the net from several sources, adding
my own flavor. I apologize for a lack of instructor notes (like the
100-foot extension cord and the paddle/keyer used as instructive aides)
but it never occurred to me that anyone would ask. If anyone wants the
actual source presentations (there are PDFs on the web site) drop me an
email.

Interesting numbers, Len

We have a continuation of the dropoff of (almost certainly) inactive Hams. Not too surprising there, if a person subscribes to the idea that a lot of folks who once used 2 meters as a sort of "pre cell phone cell phone" had migrated over to cell phones to get their communication needs taken care of.

I think that that will continue until around 2009-10.

The number that I think is most important is the new license numbers. People are still getting licenses, and at a healthy rate.

> nine months.

The above numbers include licenses which have expired but are in the 2
year grace period. AF6AY is using the term "expired" in a different
way than FCC defines it. Hamdata.com avoids the confusion by using the
phrase "no longer licensed".

>That is a 0.1% growth rate.

> In short, nothing much has happened to numbers, no significant
> changes either way.

IMHO, it is significant that the license numbers were slowly
decreasing from 2003 to 2007, and are now slowly increasing. The
growth may be slight but at least it is not a loss.

> Class changes are another matter.

Let's take a look:

Using the number of unexpired current licenses held by individuals
(not including those in the grace period) the license class changes
expressed as a percentage of the total number of licenses from Feb 22
2007 to Nov 25 2007 are as follows:

Novice: decreased from 3.5% to 3.2% - loss of 0.3%
Technician: decreased from 44.8% to 44.7% - loss of 0.1%
Technician Plus: decreased from 4.7% to 3.3% - loss of 1.4%
General: increased from 19.9% to 21.7% - gain of 1.8%
Advanced: decreased from 10.5% to 10.0% - loss of 0.5%
Extra: increased from 16.5% to 17.1% - gain of 0.6%

Combined Tech/Tech Plus: decreased from 49.5% to 48.0% - loss of 1.5%.

Since no new Novice, Tech Plus or Advanced licenses have been issued since April 2007, their declines due to attrition, upgrading and the renewal of all Tech Plus as Technician are to be expected. Note that none of the license classes experienced a change of more than 1.8%, and most experienced changes of less than 0.7%.

Any electrical contractor will tell you that not all electrical inspectors are well educated or trained. Ive had electrical inspectors state a preference for plastic boxes in a run of metallic conduit or cable. What those inspectors preferred was a direct violation of the National Electrical Code. I've had electrical inspectors try to order me to make a grounding connection in the meter enclosure which was totally unacceptable to the power utility and is not required by the NEC. I've had an electrical inspector fail my installation because I had made the Grounding Electrode Conductor connection to the service entry neutral conductor drip loop to comply with the requirements of the legacy Rural Electrification Administration (REA) power cooperative service standards even though the National Electrical Code specifically permits that location to be used.

What the electrical inspector may prefer may be directly adverse to your best interest. Bond all of your Grounding Electrodes together even if

your have to wait until after the electrical inspection to do so.

It is not necessary to bring your bonding conductor to the inside of the
panel cabinet. Bonding it to the cabinet itself is sufficient. If any
portion of the Grounding Electrode Conductor is accessible then that is
the best place to connect your inter electrode bonding conductor.

The decrease in license numbers at that time very well might have been due to the uncertainty of the demise of element 1. I know several new hams that waited for it to go away.

Mike, I wasn't presupposing any reasons for individuals to let their
licenses expire. Expirations are expirations. There's no proof or
anything else that all or some majority expirations come from
Technician class (the ones that supposedly used 2m as a cell
phone substitute).

I used www.hamdata.com primarily because that website does sort
out new licensees and expirations from the huge singular daily amateur
radio license database available from the FCC. QRZ and some other
amateur-oriented websites do different sorting. The ARRL website
listing only has sorting by 'active' license status, class, and state
or
province, does not indicate 'new' nor expiration nor class changes nor
'other administrative changes.'

ALL of these amateur-oriented statistical data services come from
the SAME public database information. That database contains
enough sub-data fields to derive all kinds of sorting. Some of that
sorting would require temporary storage of past database information
to show changes. The ARRL sorting is perhaps the simplest kind
since it requires no storage of previous database information, taking
only the 'active' individuals licensees out and sorting them by
license
class and geographical locations.

>The number that I think is most important is the new license numbers.
>People are still getting licenses, and at a healthy rate.

Well, at a 0.1% growth rate over 9 months, 'healthy' would be a
rather subjective descriptor, wouldn't it? :-)

At least they are INCREASING what was a LOSS rate, not a growth.
In the year prior to 3 March 2007 the number of expirations was
29,096 versus newcomer total of 22,605. That's a negative delta of

6,487. The positive delta over 9 months since 3 March 2007 was only 1,162 (20,901 newcomers v. 19,739 expirations).

Not having the exact statistical breakdown of any licensee numbers insofar as 9 months prior to 3 March 2007, I simply used the One Year prior available numbers and did simple arithmetic (multiply by 3/4) to find a comparative change of newcomer v. expirations. That turned out to be 21,822 expirations v. 16,957 newcomers, still a negative delta and a 4,865 average drop to total licensees in the same 9 months. In probability and speculation, without the elimination of the code test as ordered on 19 December 2006 (R&O FCC 06-178), the total licensee numbers would still be decreasing.

What would be more indicative of 'health' might be a more detailed sorting of public database information as to newcomers achieving what class license as their first. As a part of that, it would be nice
to see how many and from which class does a license class change within some time period. That seems to me to be more indicative of newcomers interest and the probable future of amateur radio in the USA once normal human attrition has taken care of the rest of us. If that probable future turns out to be different than what the devotees of the 60s and 70s newcomers did, then it is just different.
Such difference in perference would not be a 'moral flaw' of newcomers despite what some boomer-generation-newcomer licensees express now.

The future of USA amateur radio belongs to the newcomers of now. I think that the relatively minor number of existing licensees who ARE doing things for newcomers, such as Steve Bonine described in another thread here, are an EXCELLENT example of what should be done...positive steps, proactive steps to help, not hinder newcomers.

I appreciate the kind words, Len, but I think that we all need to realize that the ham radio hobby as we know it is changing. Of course, that's no different than at any time in the past, since ham radio today is different in many respects than ham radio of previous generations. Like any other technology-driven activity, things have changed and will continue to change. Can you imagine how amazed someone from the spark-gap era would be if they were transported into today's world with its tiny multi-function DC-to-light transceivers? [And just as if to underscore how common that technology has become, when I misspelled "transceiver", my email client underlined it for me, and provided the correct spelling.]

There is, however, an aspect of change these days that is different than what the hobby has ever experienced, and it's related to the topic of this thread. The reality is that during the next decades the number of active ham radio operators is going to decrease. We can massage the numbers and wring our hands, but there are two absolute facts that we cannot change: (1) The ham population is aging, (2) The general population is less interested in ham radio than before.

Perhaps some are unwilling to accept the second statement as a fact, but I think you're deluding yourself if so. Historically, most recruits into the hobby came from young folks, and this demographic is simply not as fascinated by radio as in the past -- they have many alternatives vying for their spare time. We are getting more middle-aged and retiree recruits than ever before, but even this population has many potential ways to spend their spare time and ham radio has to compete.

But the big item is the current age of the ham radio population and the fact that the same forces that are competing for spare time in the general population apply to already-licensed hams. Analysis of number of hams licensed is valuable but it doesn't tell the whole story. How many licensed hams have gone inactive? There's no way license numbers can tell us, but there are other statistics that do shed a little light on it. I'm thinking about things like the number of entries in contests, or the number of voters in ARRL elections. The problem with these statistics is that they measure only one very narrow segment of

the hobby, but at least they're not falling off significantly. Yet.

I apologize for rambling, but the point is that I believe that the number of active hams will decline significantly sometime in the next 10-20 years. I base this on what I see at hamfests (the ones that haven't already folded), club meetings, and on the air -- almost all the active hams I run into are at least 50 years old, and many are 70-80 years old. These guys (yes, almost all are male) simply will not be active hams in 10-20 years. The best of recruiting cannot balance this single fact.

On the other hand, I'm not sure that there's anything specific to be done based on a belief that the number of active hams will decline. Our local club is considering going from monthly meetings to quarterly meetings; I don't think that's a good idea but it's the sort of thing that we may see more of in the years to come. Maybe if we recognize the reality of a shrinking active-ham population, we can come up with logical and realistic reactions.

How would that indicate the 'health' of amateur radio, Len?

Whenever multiple entry-level license classes have been offered in the USA, most newcomers have usually chosen the license class or classes that were easiest to earn. That way they could sample amateur radio without a big investment of time and effort, and learn-by-doing.

Of course some newcomers have bypassed the easiest-to-get license classes and started out as Generals, Advanceds or Extras. Nothing wrong with that, but how is it a measure of the 'health' of amateur radio?

> Such difference in perference would not be a 'moral flaw' of
> newcomers despite what some boomer-generation-newcomer
> licensees express now.

What does that mean, Len? Of whom do you speak?

> The future of USA amateur radio belongs to the newcomers of now.

But not just to the newcomers.

The future of USA amateur radio belongs to all who are interested and active in amateur radio, regardless of age, experience, license class, or their particular area of interest in amateur radio. Simply being a long-time-licensed amateur does not make someone irrelevant to the future of amateur radio.

I agree that KB9X has done and is doing good things. But I think the number of "existing licensees who are doing things for newcomers" isn't minor at all.

Interesting theory! I know at least one ham who waited for Element 1
to go away, too.

If there's the possibility that the "price" of something will drop in
the near future, "sales" of that item often drop as people decide to
wait and see.

The number of US hams rose from early 2000 to mid-2003, then began to
decline almost exactly when the ITU treaty changed.

But correlation is not causation. There are any number of possible
reasons for the changes, ranging from sunspot decline to economic
factors to inexpensive cell phones and broadband internet.

The big question is whether the growth will continue long-term.

In my area in the past two months, we have picked up dozens of new
amateurs who are in their late teens/early 20's. That is a surge,
normally we pick up a few per month. But we have no problems with
expecting plenety of QCWA members 25 years from now.

> We are getting more middle-aged and retiree
> recruits than ever before, but even this population has many potential

We have been getting some oldsters too. The amount they spend per capita is shocking at times, and their enthusiasm and willingness to get involved is a great help.

The concept of the child getting their license is over rated IMO. And these days and in this world, a child siomply could not get much of the experience available. I remember when I was a young'un, friends and mysel hiking up the hill to the fellow who had the cool CB station with a tower and one of those directional three pronged verticals on it. We spent hours with the gent, happy and safe.

These days if you are going to spend time with youth, you'd better have a person with you and have passed one of the State Police background investigations. An approved escort should be with the child at all events.

> I apologize for rambling, but the point is that I believe that the

> 10-20 years. I base this on what I see at hamfests (the ones that
> haven't already folded), club meetings, and on the air -- almost all

I've been in the hamfest discussion, with older Hams, newer ones, and I've come to the conclusion that a large part of the reason that Hamfests go away is that they start too early and end WAY too early also.

These days if you get to a Hamfest at 11:00 a.m. you might as well forget even going. I've seen people starting the teardown process at 9:30.

Looking at getting to a Hamfest at say 6:30 a.m., there is a "circle of opportunity" where a person decides just how early they are willing to get up and travel. The closest decent sized Hamfests to here are Timonium MD and Breezeshooters in Butler. Timonium is around 3 hours, and Butler is a little over 2. So if I go to Timonium, I look forward to getting up at 3 in the morning. Add an hour of sleep for Butler. THe first couple years I was licensed, I would get up at that time - or more likely just not go to sleep Saturday night.But I think hard about it now. Those early start and end times severely limit the geography limits of attendance.

Respectully, I'm not really sure that another opinion on this subject is being unrealistic though.

We have been doing a 2 percent increase in the local ham population (not counting that recent surge) when newcomers/attrition is factored in. Club membership is up over 10 percent. (2006-07 stats)

I know that a lot of Hams are pessimistic about the future. We even have a few club members who figure that the service will die out in a few years, and have all kinds of reasons for that. A number of us decided that we were going to prove them wrong, and at least for the moment we are doing just that. We instituted a no wheedling and whining policy, a welcoming attitude toward the new guys and gals, gentle encouragement to upgrade, lots of social events - every other Saturday breakfasts, Wednesday evening very informal dinners, every other Saturday club shack get togethers, 4 big socials during the year. Contesting, trips to Ham radio stores. Only problem is some of the XYL's are starting to complain that their OM's need to spend a bit of time at home too. And we're all having a blast.

Well, the comparison isn't limited to going all the way back to the
spark-gap transmitter era of the 1920s. Just compare it to the
amateur
radio equipment of 1957. Only the adaptations of commercial radio
done for the amateur radio market could accurately read to within
(maybe) a hundred cycles (think Collins Radio as the best example
then). SSB AM hadn't yet reached mainstream on HF and on-off keying
CW of chains of vacuum tubes were the order of the day. RTTY was rare
and packet unheard of, even the word 'data' hadn't become a generic to
embrace all the various 'digital' modes. In fact, 'digital' was
itself hardly used, limited to nerd-geek programmers of mainframe
computers. :-)

Personal computers just didn't exist as common items of communications
before 1970, just 37 years ago. The Bulletin Board Systems weren't
there except in planning by a very few in 1975, just 32 years ago.
BBSs were the precursor to the Internet and they flourished in the
decade of approximately 1982 to 1992, became
widely popular among personal computer hobbyists and devotees. The
Internet became public in 1991, just 16 years ago, and that changed
the fabric of society in the USA considerably more than personal radio
(including amateur) had ever done. Solid-state devices had an
enormous impact in almost all areas of electronics, including amateur
radio. I see that as a very positive impact on advancement
in all states of the electronics-radio art. A few still openly long
for the old ways when things were 'simpler.'

Tagline: "When I was young we whittled our own ICs out of wood!" :-)

Heh heh, pardon my chuckling...if I had said the same thing before
2007 (and I have) the reaction would have been severe on Usenet. :-)

>Perhaps some are unwilling to accept the second statement as a fact, but
>I think you're deluding yourself if so. Historically, most recruits

>recruits than ever before, but even this population has many potential
>ways to spend their spare time and ham radio has to compete.

I have to admit that my case is a rarity and don't put myself up as
any example to emulate. :-) I was already retired 9 years (at least
from regular hours) when I became an alleged 'beginner' in radio with
an amateur radio license. :-) [that was done on approximately the
51st anniversary of getting my first FCC license...which was done 4
years after I had entered military communications...:-)]

>But the big item is the current age of the ham radio population and the
>fact that the same forces that are competing for spare time in the
>general population apply to already-licensed hams. Analysis of number
>of hams licensed is valuable but it doesn't tell the whole story.

True enough, but such statistics are about the only thing available
and
are derived from public databases by the only agency that grants
amateur radio licenses in the USA.

>How many licensed hams have gone inactive?

Careful, Steve, you can start a whole new argument on using 'active'
or
'inactive.' In the legal sense of licensing 'active' is used to
describe if
a licensee is within their 10-year grant term and has not entered the
2-
year grace period. To ordinary folk, the word 'active' is commonly
used
for someone who is engaged in some activity currently with only minor
pauses to do other things currently. 'Inactive' to ordinary folk
would
mean a rather full stoppage of an activity.

>There's no way license numbers
>can tell us, but there are other statistics that do shed a little light
>on it. I'm thinking about things like the number of entries in
>contests, or the number of voters in ARRL elections. The problem with
>these statistics is that they measure only one very narrow segment of

>the hobby, but at least they're not falling off significantly. Yet.

One might look to the market for amateur radio goods as a 'minor' indicator also...and that would be in the number of visible advertisements in the few amateur radio interest publications. Those were already diminishing in 1990, 17 years ago. The appearance of intense interest is kept alive in QST as an example, but that is a membership magazine and sounding board for the ARRL. The size and quality of the only real independent competitor in monthlies is CQ and it has shrunk in the last two decades. Popular Communications is an independent but it also caters to other radio interests, not just amateur radio.

>On the other hand, I'm not sure that there's anything specific to be

>reality of a shrinking active-ham population, we can come up with
>logical and realistic reactions.

My opinion is that I don't see any 'logical' or 'realistic' things to come
out of these discussion forums. It's (to me) just a lot of personal expression, a window into what different folk think. A lot of commentary is based on what individuals want to see and such want things to continue in ways they like personally. Their 'reactions' have, by lots of visible proof, been severely negative to anyone proposing changes. :-) What I can see happening logically and realistically is individuals (such as yourself) doing things on an
active basis and looking ahead to a more realistic probable future for the hobby. Trends have already begun and those show more changes ahead.

Tagline: "Today is the tomorrow you worried about yesterday." :-)

Nope. I concede that my opinion is based on anecdotal information based on what *I* see. Maybe I'm doing something wrong, or not doing something right, but I'm sure not seeing the same influx that you are, here in my area.

That's good, and I wish I could emulate your methods and get your results. But I think that the key words in the above paragraph are "a number of us". Maybe I can find some enthusiasm in the local area, but so far I've had little luck doing so. Perhaps the difference is urban area versus rural area.

It did take some enthusiastic people. One person is not enough, although one person can start the hunt for a few more.

Sounds like an interesting story. No disrespect intended if I say that it sounds apocryphal, though many credulous-sounding stories do sometimes actually turn out to be true (see http://www.snopes.com for the straight skinny on many of them). Perhaps the basic back-story is true, but with one or more different players (see below).

This one caught my eye, as someone who has a passing interest in American history from formal education in school, later personal reading of biographies by David McCullough, Steven Ambrose, etc., and from additional training that many Americans get: specifically, from watching hundreds of episodes of the game show "Jeopardy" :-).

I was wondering if someone else with more expertise in the subject had some additional insight. Googling around doesn't seem to demonstrate that the story is true, nor does it demonstrate that the story is untrue. One thing that makes me suspicious is that for these three men (Wilson, Edison, Einstein) to have knowledge of one another in the way that the story suggests, their timelines, particularly the periods during which they were famous in the United States, would have had to significantly overlap.

President Woodrow Wilson lived from 1856 to 1924 and served as President from 1913 to 1917.

Thomas Edison lived from 1847 to 1931, and generally became famous as an inventor after the invention of the phonograph in 1877.

Albert Einstein lived from 1879 to 1955, became well-known among physicists sometime during his famous, and initially controversial,

research published from 1905 to 1915, won the Nobel Prize in 1921, visited the U.S. shortly afterwards, and eventually became well-known among most Americans (including Presidents) sometime after he emigrated to the U.S. in 1932, certainly sometime during or after World War II.

Some points to ponder:

- An early 20th Century U.S. President like Wilson might have been aware of American winners of the Nobel prize, but might he have been made aware of a still relatively obscure German/Swiss physicist before he left office in 1917, pre-Nobel?

- Even if we assume that the President was Warren Harding (who was close to Thomas Edison, even camping out with him in Maryland during his presidency:

http://www.ohiochannel.org/your_state/collections/collection/details.cfm?collection_id=78985&file_id=81864

Harding only served briefly from 1921 to 1923. A better match would be Herbert Hoover, who clearly was aware of Albert Einstein:

http://www.presidency.ucsb.edu/ws/index.php?pid=22068

and served during the time that Thomas Edison was still alive:

http://teachpol.tcnj.edu/amer_pol_hist/thumbnail341.html

- Hoover's successor, Franklin Delano Roosevelt (FDR), only became president in 1933, two years after Edison died in 1931.

- Thomas Edison was a great inventor, but an individual without much formal education. Would he have necessarily been aware of what was going on in a theoretical academic field like Physics before 1917, and before Einstein had even done recognized works in that field? Recall that the General Theory of Relativity, published in 1915, was not widely accepted until years later, his Nobel Prize was for the Photoelectric Effect, and as a resident of one of the countries in the Central Powers (opposing the U.S., France, and the UK during WWI), his work would be censored from international publication during most of Wilson's term, anyway:

http://en.wikipedia.org/wiki/Albert_einstein#Light_and_general_relativity

- The only reference I could find to Albert Einstein and Thomas Edison even just in communication with one another was this photograph from 1930:

http://www.topfoto.co.uk/gallery/einstein/default.htm

where Einstein telephoned Edison (from Germany) to congratulate him on the 50th anniversary of the invention of the electric light bulb, much later than Wilson's term of office.

So, the timelines of Wilson, Edison, and Einstein don't really match up simultaneously. Nor do those of FDR match up with Edison, nor Wilson with Einstein. Either the President would have to be someone like Hoover or Harding, or the scientist would have to be someone else. At the very least, Einstein couldn't really be considered a "prominent American" until after he emigrated to the U.S. in 1932, and obtained U.S. citizenship in 1940.

Ob Amateur Radio: Thomas Edison was a contemporary of Hiram Percy Maxim (co-founder of the ARRL), who lived from 1869 to 1936, and is credited with inventing the Maxim Silencer for firearms, and the automobile muffler. Hiram's father, Hiram Stevens Maxim, invented the machine gun, and was involved on the losing end of several patent disputes with Edison over the incandescent light bulb.

1946. 10M contest

Newsgroup: rec.radio.amateur.moderated
Date: 2007-12-10 01:45:46 UTC
From: KØHB <groupk0hb@earthlink.net>
Message-ID: <9f1699bf-0ae5-4f1c-bc9c-c8059ccd43c3@r1g2000hsg.googlegroups.com>

So who broke the 10 meter band? More so who is going to fix it and when? (Better be someone good as the last one who worked on it didn't do so good.....downright well..... unsatisfactory!)

I suspect most scores from this weekend may look more like the typical number of band changes on a multi-band contest than total score.

Beep beep,

de Hans, K0HB

1947. Re: Grounding my HF radio equipment

The National Electrical Code (NEC) specifies that there be two grounding points for a residential system. That can mean either two ground rods, six feet apart, connected to the panel with a continuous loop of wire, or a single ground rod in cases where there is municipal water, and the second ground source is the water main coming in, on the road side of the meter. The gas line also needs to be grounded to the panel.

In the main service panel, the grounding system is attached to the same buss as the bare neutral coming in from the transformer. If your shack is running off a sub-panel, it should be fed with four conductor cable. In this case an insulated neutral is used and the bare (or insulated, it doesn't matter in this instance) ground is connected to a separate equipment ground buss. If your shack is in a separate structure that has its own sub panel, it needs to be fed with three conductor ground, the neutral is connected to the ground bar and a ground wire from a single ground rod is connected to the same buss (similar to the setup at the main panel). It sounds confusing as written here, and it's even more confusing to read it from the NEC, but I just had this out yesterday with my local inspector while going over the fine points on a job.

All that NEC stuff is important to check to make sure you're setup is electrically safe. As for station grounding, it's not usually a good idea to use the electrical system ground rods for your RF grounds. Your rig, tuner, amps, etc, should all be grounded to a single buss with the shortest possible wires, then a large chunk of wire, #6 or better, should run as directly as possible to a separate 8' ground rod. If you have a tower, you should drive at least one 8 footer at the base and ground it there. There's no limit to the number of ground rods you can have for RF grounds, they're less than $10 from a distributor and well worth the effort. I've heard of hams setting up verticals with very minimal radials, just driving several ground rods.

>>But somewhere along the line somebody in the ham groups stated that
>>the National Electrical Code states that there shall be one and *only
>>one* grounding point per power drop and the neighborhood code cops and
>>the insurance companies reportedly get stiff about it.

The answer to that is that if there is more than one they must be connected. The methods differ depending on the location of services in the structures and around the property. An electrician following the NEC would have done this during the installation and (hopefully) the inspector would have signed off on it. Ground rods for RF equipment SHOULD NOT be connected in any way to the electrical system ground

rods.

So, where were you??

QSO: 28021 CW 2007-12-08 1544 W9WI 599 TN WA0MHJ 599 MN
QSO: 28005 CW 2007-12-08 1600 W9WI 599 TN K0AD 599 MN
QSO: 28005 CW 2007-12-08 1610 W9WI 599 TN K0RC 599 MN
QSO: 28014 CW 2007-12-09 0157 W9WI 599 TN N0UY 599 MN
QSO: 28020 CW 2007-12-09 0314 W9WI 599 TN K0TCP 599 MN
QSO: 28003 CW 2007-12-09 1625 W9WI 599 TN KR0B 599 MN
QSO: 28003 CW 2007-12-09 1643 W9WI 599 TN AC0W 599 MN
QSO: 28039 CW 2007-12-09 1707 W9WI 599 TN W0LS 599 MN
QSO: 28021 CW 2007-12-09 1713 W9WI 599 TN N0AT 599 MN
QSO: 28017 CW 2007-12-09 1719 W9WI 599 TN KN0V 599 MN
QSO: 28017 CW 2007-12-09 1741 W9WI 599 TN KI0F 599 MN
QSO: 28017 CW 2007-12-09 1806 W9WI 599 TN K0SR 599 MN
w9wi@linux5:~/Contests$

(I don't see K0HB in this list!)

The first five QSOs were pretty weak on scatter, but the other seven were
pretty loud. Decent (though weak) Es opening up your way.

Managed just shy of 400 QSOs.

Oh, and the DX wasn't completely missing either:

QSO: 28002 CW 2007-12-08 1542 W9WI 599 TN ZW5B 599 114
QSO: 28003 CW 2007-12-08 1543 W9WI 599 TN WP4I 599 52
QSO: 28024 CW 2007-12-09 1412 W9WI 599 TN HD2A 599 234
QSO: 28029 CW 2007-12-09 1542 W9WI 599 TN PJ2T 599 180
QSO: 28003 CW 2007-12-09 1611 W9WI 599 TN ZS6WN 599 011
QSO: 28034 CW 2007-12-09 1705 W9WI 599 TN ZS1EL 599 193

There was more DX (notably HP1WW and HK1KYR) that faded out before I could
work them.

I did however get a BUNCH of reading (and my Christmas cards) done during
the contest...

Grounding the gas line here would be an exercise in futility. A metal
pipe goes into the ground just outside my home. It is three feet long.
It then connects to a plastic gas line which goes under U.S. Route 250
and runs to a gas meter about 100 yards away.

That's a very, very bad idea. If your shack ground is not tied to your
electrical ground and a near miss strikes power lines, the shack ground
and your electrical ground will be at very different potentials. Your
radio gear will be right in the middle.

> I've heard of hams setting up
> verticals with very minimal radials, just driving several ground rods.

I've heard of it too, but it is another very bad idea. There is simply
no way that driven ground rods can substitute for a radial screen. They
are intended to do different things.

That's simply incorrect and dangerous. I have connected my shack ground to my electrical ground with some great big honkin' copper wire. You may have as many different ground rods as you like. You should connect all of them to a single point.

I never considered a serious effort at this point the cycle. I did
about three hours in the contest and quit when the Steelers-Patriots
game began. I must have missed the DX. I worked SOAB HP mixed with:

71 QSOs 18 States on CW

47 QSOs 17 States on SSB

Total 13,370 mostly search and pounce

http://www.w9wi.com/ham/10m.gif

(I hope.)

It's an animated GIF, roughly 2.8MB. Shows which states I worked during each hour of the contest - the little blue bar at the lower left is a relative QSO count gradually increasing. (actually it's one pixel long for each QSO made to that point)

Worked coast-to-coast including a nice little opening to VE7 and Seattle around noon Sunday and one to New England around 0000UTC Sunday. (Sat. night)

While true, it's also true that he served as President from 1917 to 1921.

:-)

Even in that sea of dates that I posted, I should have noticed that
Wilson was not a one-termer, and did serve through World War I Armistice
Day on November 11, 1918.

Correct. RF "grounding" is so different from Power ground that it shouldn't even be called the same thing. Good RF grounding can be had without a direct connection to the earth, my radials are insulated wire and don't have any wire exposure to the ground, so that they won't corrode. (note that the antenna gets direct connection to ground through the base.

It sounded freaky weird to me at first, but as I put in my radials over several sessions (criteria being how long my poor abused knees could stand it) I measured and adjusted the system each time, and it worked as advertised. More radials = better grounding. The coil at the bottom of my vertical required less and less inductance to match the system.

But it surely isn't a power ground, and given that the rf is absorbed (right word) at or near the ground surface, those ground rods would only be useful at that first foot or so.

Hi Jack,

It's what we call football (played with protective padding) in the states.
I would hazard a guess that soccer or rugby (played w/o padding) is a bit
rougher.
I understand that the difference between soccer and rugby is that in soccer,
injuring your opponent is incidental to scoring while in rugby, scoring is
incidental to injuring your opponent. ;-)

American rules football.

(Pittsburgh vs. Boston. I think Dave is not too far from Pittsburgh.)

I think it's largely a chance thing - if the short-skip happens to go your way then it's best to be in the middle. (this year the Texans got the luck. Right now 5 of the 10 top claimed scores in high-power CW are in Texas.)

A bit like a cross between Rugby and Football for girls.
They wear padding and stop for a chat every few minutes.
In the USA universities are rated on the success of their teams rather than
any academic achievement.

I have just set up my vertical and a couple of HF rigs after a hiatus of
more than a decade. I have not heard a single station above 40M yet.
I did hear a PA0 on 80M, good signal too.

Guess I picked the wrong time to get interested again. :-(Looking
around for antenna wire now so I can get some kind of a dipole up as I
was really never impressed with the oerformance of any of my trap verticals.
Sure wish I knew what I did with that W3DZZ Trap Dipole I started with in
Germany 30 years ago!!

Not necessarily; there's nowhere to go but up as the sunspots return.

I run Faros on the PC in the shack every weekend, from Friday
afternoon 'til Sunday evening watching and waiting ...

http://www.dxatlas.com/Faros/

One of my earliest ham-radio memories is a 1961 CQ cover with the
depressing title "Cycle 19 - The Declining Years" (I was first
licensed in January 1961).

indeed except for some very local signals (and a bit on FD) I have not used
the bands above 20m amuch at all and each station in my personal log between
20 and 6m has been one I help set oup the station and anttena myself
```

Well, I just went out this morning and put up a 40M dipole (best I could
come up with from the junk left over in my cellar) and it hears a lot
better than the vertical. (A quick test using CHU showed it to be at
least twice as good as the vertical. Heard some guys chatting on 20M.
Heard what sounded like some slowscan and some packet, too. Nothing
above 20M but definitely better than what I heard during SS a couple
weekends ago. Have to find a listing for beacons and start getting
into this again. I had almost forgot how much fun it could be. Maybe
my next house will even have a tower and an HF beam. :-)

Wonder whent he next RTTY contest is? That was always my favorite mode.

All the best for the holidays to everyone.

As another poster said, "Not necessarily". The higher bands do open,
although less well than during a sunspot peak. Part of the problem, I
think, is that so many people are convinced that the higher bands are
dead that they don't bother to listen _or_ call CQ.

A few weeks ago I had a nice (brief but easily-copyable) PSK31 contact
on 20, from northern California to a polysyllabic city on the
Kamchatka peninsula. 35 watts and a simple horizontal dipole at 25'
on my end.

Ordinary TTHN-insulated stranded wire from your local homebuilding
store works fine and isn't expensive. No need to get fancy, unless of
course you _want_ to get fancy :-)

The nice thing about a full 40m lambda/2 dipole is that it'll accept power on 15m as well. While 15 has been mostly dead, there have been times when there's activity. I don't have anything for 10m (yet) so I can't give my personal impression, though some hams have reported short openings. 40 & 80 have been pretty hot... worked China on 40 in the WWDX CW contest... heard a

G3 working a pileup on 80m CW a few nights ago. I'm on the left coast and have just low dipoles for those bands (80m is a 4-wire cage inverted vee).

Yes, I've worked many VK... I should've mentioned Australian Rules Football.
A friend (with tongue in cheek) explained it to me, "The first rule is,
there are no rules." ;-)
As a kid, we used to play touch (American) football in the schoolyard. It
was too easy to tag a ball carrier, so we made it two-handed. That was too
easy, so we made it two-handed-below-the-knees. Whether your tagged the
ball carrier or not, you were headed for the ground. The question was how
much it was going to hurt! ;-)

A major point in my decision to go with a 40M dipole. :-)

It wasn't by any chance G3YEU, was it? A very good old friend of mine
from the days when I was DA1WO and he was DA1BS.

> I'm on the left coast and
> have just low dipoles for those bands (80m is a 4-wire cage inverted vee).

Well, I do have a Dentron Super Tuner as well, so in a pinch I can work
any band (except 160 which seems to be not working on my Drake at the
moment.)

The *real* ham would have installed a TV tuner card in his hamshack
computer & operated during the time-outs.

(which seem to comprise 90% of the broadcast of an American football game...)

1976. Identification Question

Newsgroup: rec.radio.amateur.moderated
Date: 2007-12-13 19:25:56 UTC
From: KC4UAI <kc4uai@gmail.com>
Message-ID: <dc263a4d-1968-4579-b1d1-0944eef37c35@e6g2000prf.googlegroups.com>
Source record: 3485

I was looking for a graphic of the US Ham Bands that included the ARRL band plan to replace the out of date posters in the club's shack. I went to looking around and found a few neat looking PDF files but I couldn't find a poster that has both the Part 97.301 and the ARRL band plan in graphical form.

I couldn't find what I wanted, so in true ham radio style I started to develop one of my own. While I was digging though part 97.301 and the ITU band plans I came up with an unanswered question. In Part 97.301, only 60 Meters is specified to be USB. The rest of the bands can legally be used with either USB or LSB when using SSB phone. I figured that the ARRL's band plan would specify USB or LSB for the band, but they don't, at least in the tables I found.

I understand that there is a convention born of convenience when SSB was just getting started. Apparently it was easier to build multi-band rigs for SSB that did upper and lower side band on various bands when this all got started but most of us don't build our rigs today.

Where can I find out what the convention here is for 160, 80, 40, 20, 17, 15, 12, 10, 6, 2 (and up) SSB phone operation?

Thanks!

I was considering another question and in a bout of laziness I figured
I'd ask the group and not spend a few hours reading Part 97 trying to
figure it out...

I use my assigned call sign to ID myself when operating my station,
but what if I'm operating a station that's not mine? Can I just
provide my call as identification or do I need to include the
station's call too?

What FCC rule(s) speak to this situation?

I'm guessing that I have to provide the ID of the station I'm
operating and my call being the control operator but what is the
accepted format for that for the various modes: CW, Phone, Etc?

sez

Radio Modes

The simplest radio signal is just a single frequency. By turning that radio
wave on and off, it's possible to send morse code (CW). Amplitude
Modulation is the simplest voice modulation scheme but it's not very
efficient because it has two identical (redundant) sidebands with the voice
information and the radio carrier that doesn't contain any information.
Amateur radios often use Single Sideband (SSB) transmissions that are
spectrally (space) and power efficient by removing one of the AM sidebands
and the carrier before transmission. This leaves either the upper or lower
sideband (USB/LSB). Convention dictates that lower sideband (LSB) signals

are used below 10MHz and upper sideband (USB) is used above 10MHz.

60M as you pointed out is USB

This answer applies to US hams, as some other countries have other rules.
Our license have two parts, a Operator Privileges and a Station Privileges.

In principle, the station is licensed, not the operator. This probably
has to do with remote station operations.

However, it often leads to some confusion, such as an interpretation
that an Amateur who has no station does not have a license. Another
quandary can happen if say a friend hands you his HT at say a Public
service event. Do you ID with his call? His call. What about ownership
of the station? If I check out a rig for my club that was donated to the
club, that will be for sale, do I have to ID using a club call sign?

Okay, enough of that!!

In reality, we are identified by our call signs. If someone refers to
N3LI, I'm sure to say "wassup"? Every station I operate with the
exception of Field day and contesting at the clubhouse, I ID as my call.

> What FCC rule(s) speak to this situation?

I spent quite a while looking for just that, and there is no clear
rule. There are some rules regarding operating another station when a
person is operating outside their regular privileges, and upgraded
callsigns. but precious little regarding the station vs operator issue.

The relevant section is §97.119 Station identification. The call of the station must be used, "an indicator consisting of the call sign assigned to the control operator's station must be included after the call sign."

However, I don't think the FCC prohibits one amateur from lending his equipment to another. So you could take the position that the station owner has lent his equipment to you, and during the loan, it is your station, so you only have to use your call sign.

As I read it, that paragraph (3) applies only when the operator's
license class exceeds that of the station licensee... and most seem to
feel that it's required only if you're transmitting beyond the
privilege level allowed by the station license.

>However, I don't think the FCC prohibits one amateur from lending his
>equipment to another. So
>you could take the position that the station owner has lent his equipment to
>you, and during the loan,
>it is your station, so you only have to use your call sign.

That seems to be the usual convention.

There seem to be several common practices, which I believe (speaking
not as a lawyer) fall within the scope of what the FCC considers a
reasonable interpretation of the rules:

- Use your own station callsign (the "borrowing/lending equipment"
concept). This makes you fully responsible for the transmission.

- Use the station's own callsign, only. This seems to be legitimate
if you're operating with the station owner's permission, and are
transmitting within the privileges covered by the station's
licensee or trustee (and your own, if you don't have a higher-
privileged control operator present). This is a common approach
used for transmitting at a club station... you use the club station
ID.

- Use the station's callsign, slash, your own callsign. You'd do
this if you want to actually ID the location you're transmitting
from (e.g. a club station or that of a friend), but you're
transmitting on frequencies which are allowed by your own operator
class but not by the station licensee's class.

The ARRL uploads into the FCC database directly, which assigns the calls.

Laurel VEC, which does Hamvention in Dayton, posts the calls of people who take the test Friday ON SATURDAY. I asked how they do this, was told Laurel gives the Dayton VE team authority to upload data themselves. Sweet. The database is offline on the weekend, so Saturday testees have to wait until Monday.

ARRL VEC side of operations has their heads on straight. Now if they gave tests for free and let their VE teams upload ...

The story I heard is that this started because Collins radios had an IF
of 9MHz and only needed one set of (expensive) sideband filters to have
LSB below 9 and USB above. Mixing to get the final output: F1+F2 gives
same sideband you start with, F1-F2 inverts.

That's what I was told.

I'm not sure I understand the question. Are you saying that if you visit someone else's shack and operate their equipment, you should use their callsign..?

Here in the UK the convention is to use your own call with the suffix /A (alternative address) i.e. "this is G6URP/A operating from the QTH of G3USA".

If however G3USA was licensed to use bands/modes I was not, I could operate on them under his callsign, but giving my own call as the operator. In this case I would complete G3USA's log not my own.

You were told wrong. That mixing scheme does not invert the
sideband.

This amateur radio urban legend has been around a while, but that's
the first time I heard it attributed to Collins.

Here's what really happened:

A few hams were using SSB in the 1930s. W6DEI, Ray Moore, was
on the ham bands with SSB in 1934 or earlier, and the use of SSB
is promoted in "200 Meters And Down", first published in 1936. But
it wasn't until after WW2 (late 1940s) that SSB began to become
really popular with hams.

The HF ham bands in those days were just 80, 40, 20, 11 and 10 meters.
US hams didn't get 15 meters until 1953 or 54, and didn't
get 30, 17 and 12 meters until after 1979. 160 had been a popular
band before WW2 but it was reallocated to LORAN during the war
and we got it back a little at a time over many years, with all sorts
of restrictions, until LORAN was finally phased out.

40 meters had no 'phone segment until 1953/54, either. 11 and 10
were great as long as there were sunspots.

So the two most popular 'phone bands were 20 and 75, which were
much narrower then than today. For some reason, the 75 meter SSB folks
chose LSB, while the 20 meter gang went for USB. Most rigs of the time
could do either sideband on either band, but the convention took hold
early on and never changed. When US hams got 15 meters, it seemed
natural for 15 to be USB, and when 40 got a 'phone band, it was
equally natural for 40 to be LSB. It had nothing
to do with Collins or 9 MHz IFs.

Now about the mixing scheme:

None of the early Collins ham rigs had a 9 MHz IF. Collins made mechanical filters, which were only practical up to about 500 kHz or so, and sideband choice with them was a simple matter of switching a BFO crystal.

Some early SSB transmitters did indeed generate SSB at 9 MHz, and then heterodyned it to 75 or 20 by mixing with a VFO in the 5 MHz range. But that mixing scheme *does not* invert the sideband! If you take a 9 MHz SSB signal and mix it with a 5 MHz VFO signal, you'll get the same sideband out of the mixer as you put in, regardless of whether you add for 20 or subtract for 75. The VFO will tune backwards on 75, but the sideband will not invert. Those early rigs all had USB/LSB switches in order to match the convention.

The only way to get sideband inversion by mixing is if the local oscillator frequency is higher than both the input and output signal frequencies. The 9 MHz-IF story isn't just an urban legend - it flat out doesn't work.

It *is* true that if you generate SSB in the 5 MHz region and mix it with a ~9 MHz VFO, you'll get the desired sideband inversion. Some 1960s SSB rigs used that scheme - but they were long after the convention was in place. And the urban legend doesn't mention those rigs.

If you want to see the math on how all this works, I can post it.

[snip]

ISTR that early Swan transceivers offered only USB for 20, 15, and 10,
and only LSB for 80 and 40. They say the memory is the second thing to
go, but perhaps that was where this convention got started.

BTW, given a choice between LSB and USB, the military's preference is
for Upper sideband, since using USB makes it easy to talk another
station on to a net frequency: if his voice sounds high, then so is his
frequency.

You are correct, sir! But they were not the only ones to do
that - National and some others did too. The early Heath
monobanders had no sideband switch, for example.

Swans used IFs in the 5 MHz range.

> They say the memory is the second thing to
> go, but perhaps that was where this convention got started.

The problem is that by the time Swan showed up in the early 1960s,
the standard was already in place. And later Swans let you use
either sideband.

The 9 MHz IF/ 5 MHz VFO system was popular in the 1950s. The
Central Electronics 10A, 10B and 20A exciters all used it, as did
the popular W2EWL SSB rig featured in the article
"Cheap and Easy SSB". You'd think those popular rigs would have
caused the standard to be that the same sideband would be used
on both 20 and 75, because they don't invert the sideband. Swan
would then have been bucking an established trend. Yet the opposite
is true. I suspect that Swan chose their heterodyne scheme to
save a little money by not needing a second BFO xtal nor a switch.

IMHO, there's also the simplicity. If everyone is on USB, regardless
of band, you don't have to think about which one to use, or even
provide a choice.

I cut my 40/15m dipole for 7.07/21.21 MHz. I don't recall the callsign of the G3. Check out some of the nifty calculator programs on www.smeter.net. I used two... one for the cage dipole/inv-vee and one for a lambda/2 vertical for 20m. I use Davis RF (I have no connection with them) for my wire antenna parts. I found my local metal supplier *stocks* a good variety of aluminum tubing. I'll use them as a source of materials to resurrect my 15m/3el homebrew yagi for the upcoming sunspot peak.

Yes, It sure does. Common sense seems to rule the day if you ask me.
This question came up in a discussion about what the ID requirements
where for operating the club station here at work. I was told that
all I needed to do was use my own call, but be sure to log my
activities in the station log. I guess they work under the "you are
borrowing the station" when you operate it, but something just didn't
sit right with me. If I'm required to log my activities into the
station log but only identify with my call something didn't make sense
and it didn't make sense to me just to use the club call when I'm
using the station for my own thing.

So, here's my "let's be totally careful" approach given the
discussions I've seen so far..

In all cases, I will log my activities into the club station's log
because the station trustee has requested that I do so.

For identification I will:

IF, I'm just operating the club station on my own and not
participating in an officially sanctioned club activity I will
identify with *both* calls, the club first followed by mine.

IF, I'm operating the station during an officially sanctioned club
event, I will identify with the club call only and log that I was the
control operator.

That sounds pretty safe to me based on what I've seen thus far. (At
least here in the USA..)

That's fine. Perhaps overly-conservative, but it seems like a fine
operating practice.

>IF, I'm operating the station during an officially sanctioned club
>event, I will identify with the club call only and log that I was the
>control operator.

That's safe, I think, *if* the club's trustee has a license class
equal to or greater than yours.

If not, then if you're transmitting in frequencies allowed by your
privileges but not by the trustee's, then you *must* take the
more-conservative approach of transmitting the club station's call,
stroke, your own callsign.

Otherwise, you'd end up with a situation in which listeners (possibly
including the OOs or the FCC) would hear an ID in (e.g.) the Extra
portion of the band, from a callsign belonging to a station which has
(e.g.) only General privileges. That could result in a letter from
Mr. Hollingsworth to the trustee, stating that the station had been
transmitting outside of its license privileges and asking for copies
of all of the logs, etc. That's the sort of situation best dealt with
by prevention :-)

LORAN is still active, at least according to the Coast Guard.

Yea, I failed to mention that the station trustee and I are both the
same license class.

Under no circumstances can one operate outside of his/her privileges
while acting as the control operator and I wouldn't want to give the
impression that one can just ID with the club ID and consider
themselves an "extra for the day" by virtue of being in the club
shack. Now if somebody is there with them they can extend their
operations to include the highest licensed ham present, but the
highest license present then becomes the control operator and
communications outside of one's privileges becomes third party
communications if I'm reading the rules correctly.

I think I'm going to put a section in the operating manual for the
shack that explains all this. Just to keep the raft of newbies coming
in from making any mistakes that brings us to the attention of the FCC
enforcement guys.

LORAN "C" still exists* but LORAN "A" has been eliminated. It was
LORAN A that used part of what we call the 160 meter band.

* But just barely exists, at that. Take a look at a marine electronics
catalog. The only LORAN-related product that I was able to find by
searching an on-line catalog was a replacement antenna that was made by
Shakespeare. You would think that the flat panel multifunction displays
(depth, RADAR, fish finder, moving map, etc.) would have LORAN as an
option, to back up GPS, but it appears to me that they do not.

>exception of Field day and contesting at the clubhouse, I ID as my call.

Really, Mike! The station is IDed with the station licensee's call
sign. The only time that the call sign of the operator is used is if
the privileges of the op are greater than the privileges of the
station licensee and the op is exercising those privileges. This is
independent of who owns the radio.

That's the hardest thing that I have to teach to ops using our club
facilities and fixed facilities at ARES/RACES served agencies which
hold individual call signs.

Don't make me look it up and print it -- I'll bill you for the
research! <ggg>

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation | decisions in the newsgroup itself are also not permitted, as stated in | our original newsgroup charter. Please direct any such critical | feedback to our administrative contact address at the bottom of this | article, where it will be carefully considered by an appeals team of | moderators. This team is distinct from the initial team of moderators | that approves or disapproves article submissions, and thus can provide | independent oversight of moderation decisions. |

Similarly, if you see an obviously inappropriate article in our | newsgroup, please assume that it was a mistake or a direct forgery. The | moderation team makes every effort to protect the newsgroup from such | incidents, but they do happen, albeit rarely. You may also submit | feedback to the same address regarding such articles in our newsgroup, | but it is likely that our monitoring software and procedures have | already detected it, and we are actively handling the problem. Please | resist "piling on" with followups to the newsgroup when these incidents | occur, so that we don't have to reject such articles. |

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

USB was the commercial standard for the 50 years or so that I've been
in that business. Even with ISB (Independent SideBand) where each
sideband has different information, the "lower" sideband(s) are not
inverted relative to the "upper" sideband(s).

Yes, the CE 10A, 10B and 20A exciters all used a 9 MHz SSB
generator. They were quite popular in the 1950s.

But they could not be the source of the amateur LSB/USB convention,
because that scheme does not invert the sideband on
either 75 or 20.

Several years ago I had a QSO with a crusty old Navy type who had just retired, somewhat in disgust because the service was no longer teaching things like Morse code and how to use a sextant to do navigation. His contention was that if there was another war the enemy would knock out the US navigation satellites, we would knock out their system, and for the rest of the war both nations' fleets would wander the seas, lost.

I wonder how big the solar event would have to be to render GPS unusable. If that or something else took away the capability, it would certainly have a huge impact these days.

It's not been an issue for me until this Christmas when my wife decided to get me a VHF/UHF mobile rig. I've been using an older Icom 2 meter rig in both the cars for years so both cars have Icom power cables in place, but the new rig doesn't use the same power connectors.

I'd like to settle on a common power connector for both the radios, but I'm not all that sure where to go to find something that is reasonably priced and is not going to disappear in the future and force me to go out and buy all new connectors again.

I figured I'd not remove any of the existing connectors on the radios, but build up short jumpers that adapt to the connector of choice. I also figured that I'd use the existing power wires by replacing the current Icom power connector with what ever I pick.

Any suggestions on what to use and where to get them?

Many groups seem to have standardized on power connectors
for interchangability reasons during events (including real
disasters, etc.) For example, in my area the PowerPole
connectors from Amp are the standard.

I buy my supplies from my specialty dealer (who is a ham)...
http://www.dcpwr.com/ But the connectors and accessories
are available from many places.

What I did years ago was build a Conversion Cable using the Propritay
Power Plug of each rig and a common AMphenol Power Connector, with
say 3 inches of wire in between. The Amp Connectors can be had from
DigiKey, Mouser, even Jameco, or your local Electronic Components Supply
House, and you just buy a dozen extra for stock, and your set for
life.....

I use "bullet" connectors, common in the UK for making up power leads, not sure if you have them in the US..?

Here's a link to a UK supplier, you can see there what they are, obviously you would use them in a polarised fashion, with the female connector on the "live" feed from the battery.

These are the female ones:
http://www.maplin.co.uk/module.aspx?ModuleNo=42724&doy=18m12

Male:

http://www.maplin.co.uk/Module.aspx?ModuleNo=42722&&source=14&doy=18m12

Hope this helps, note to whoever moderates this, I know it's a commercial site but it's intended purely as a means of showing the type of connector I mean :-)

Icom VHF radios now all use the same T connector, and I believe almost all other major manufacturers have moved to that connector for VHF/UHF radios. Different connector for HF, tho. As KE7GKP points out, a *LOT* of groups are moving to Anderson Power Pole connectors as a common connector, and this is pretty convenient around the shack, too. Simply make a pigtail for each rig with an APP connector, and now anything can connect anywhere, and odds are your local club or ARES group will have a similar convention.

One of the issues has been that lower cost/smaller connectors could not handle the current required for HF radios. While they APPs are available for different current levels, they can interconnect. So you can put a 45 amp connector on your power supply and plug in a radio with a 15 amp connector.

Well, after some investigation online, it seems that the Power Pole solution is likely the most flexible for my purposes. The ARES group I'm in doesn't specifically specify a configuration, but many of the other groups in the area do specify the Power Pole.

I also decided to continue this standard into my shack so I can move the various radios between various locations and not have to worry about coming up with power connections all the time. There are also some very nice distribution panels available from various manufacturers that use this standard. I also found a distributer that also has some clips that hold the connectors together in high vibration environments (like my cars) and they also had some dust covers to hopefully keep the dust and kids' fingers out when no radio is installed.

I do wish that Anderson would put out a 2 conductor version of their "power pack" products. It would be nice if you could build these with built in clips and only have the size of 2 conductors instead of their minimum 4, but I guess there may not be a huge market for that. Well if they do come out with them in the future, it should be easy to retrofit if I want.

Thanks for the help..

If you decide to go with the Anderson Power Pole connectors, Powerwerx
has a good selection. I would also consider buying the West Mountain
Radio crimper as I have found it makes an excellent crimp that slips
easily into the plastic shell. I tried the cheaper G&B crimper and had
trouble making a consistent crimp that snapped into the shell easily.

APPs have an approximately 5 lbs seperation force rating, so you'll want
to avoid much tension on the connector in your installation. I have them

in my mobile installations without issue.

Not to intentionally hijack the thread, but... ;-) Where can I buy those T-connectors? I've looked in Allied and Newark catalogs and can't find them. In order to make jumpers or quick-disconnects, for example, I need to have a T-connector for my Yaesu mobiles (FT-1500 and FT-7800R) to attach to the radio's existing cable. I'm not going to cut off the existing cable.

One source is http://www.powerwerx.com

They'll sell you the OEM "T" connectors with inserts ($1.95 per), or
a pre-made OEM-T-to-PowerPole adapter cable ($10 for a one-footer), or
a "universal both sides adapter" (one male T, one female T, two sets
of PowerPoles) for $15.

They also have the IC-7000 power connectors, FT-100 connectors, 6-pin
Molex, and lots of other goodies.

Oh... I've been advised that it's probably better not to use the small
metal "roll pins" to lock together individual PowerPole housing pairs.
At least one person has had problem with these pins popping out of the
connectors and (potentially) bouncing around in the vicinity of
battery terminals or other "hot" electrical contacts. Not good. If
you want to lock together the red and black halves of a pair, I'm told
that a drop of acetone or cyanoacrylate glue is a better way to do it.

I don't know if this caution applies to the retention clips, as I
haven't tried using these myself and don't know anyone who has.

A quick note re: Power Poles and mobile operation.
Use the smallest cable tie to hold the two connectors together as they
sometimes have a tendency to shake / pull apart.

I pretty much always get them at hamfests, but I often end up getting them
from Tower Electronics, who has an online presence.

http://www.pl-259.com/page4.html

Looks like they are more expensive than PowerX tho. About the same for the
plug but double for the socket.

They have little clips you can get to prevent them pulling apart.

Kenwood also.

Does anyone know where I can get a supply of these "T" connectors, both
the male & female ends?

I have found the female connectors with 6' of heavy wire and fuse
holders for about USD20, which I see as a bit pricey, but not the male
ends (the end that is on the radio).

Click "Connectors" on the left, then "OEM Connectors".

The OEM "T" male and female connectors are $1.95 per connector (one
shell and two inserts).

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet |
newsgroups is the RadioBanter site: |

http://www.radiobanter.com |

sponsored by the NewsgroupBanter project: |

http://www.newsgroupbanter.com |

It, too, supports both reading and posting. |

-- Will the material appearing in rec.radio.info be archived somewhere? |

Yes. See Google Groups and RadioBanter above. |

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Archive-name: radio/rec-radio-info/guidelines
Revision: 1.5 2007/03/22 16:30:49
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rri/index.html

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

2025. Re: Mobile Power Connector choices?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-12-22 23:18:30 UTC
From: Geber <Geber@bitbucket.invalid>
Message-ID: <5PidnU9ELtOCGfDanZ2dnUVZ_hudnZ2d@comcast.com>
Source record: 3434

I suggest Powerpole connectors, since they are becoming quite
popular among hams active with RACES and ARES. One source
is http://www.powerwerx.com/ (the 15/30/45 ampere model;
the shells are all the same and the metal insert is chosen based on
wire size).

Note that the crimp connector from Anderson is expensive.
Powerwerx suggests a GB crip tool, which I have. It tends
to make the metal pieces a bit too wide, so you have to
squeeze them with pliers to make them fit into the shell.
You might want to solder them, if you're good at that.

You might want to use the correct tool - the West Mountain ratchet
crimper. I invested in one of those several years ago and consider it
one of my best tool investments in all the years.

Do you know whether the die (anvil-and-punch) sets for the PowerPole
connectors are available separately? There are several brands of
ratchet crimper handles which take interchangeable die sets (Ideal and
Paladin among others). I've got one such, and I'd rather spend $25 or
so on a die set to add to my collection rather than buying a whole new
set of handles.

Hi Phil,

I know what you are saying, but there is a world of difference between
the seemingly clear rule and the reality. Our club has 3 call signs.
Which do I use? I've loaned equipment to the club to use for field day.
Must we operate under my call sign, and don't forget the other equipment
is the club's, or might be other equipment loans.

Some times there could be so much discussion about what the "proper" call

sign is to use that people might just pack up and go home.

Are you sure that all three have the same club name? The station
trustee is responsible for telling the operator(s) what the correct
club call sign is.

Our club has a club call sign covering all of our activities, and
there is a sub-group of contesters in the club who have obtained a
different club call sign - with a different licensee - for contests
that they participate in separate from the club station.

>I've loaned equipment to the club to use for field day.
>Must we operate under my call sign, and don't forget the other equipment
>is the club's, or might be other equipment loans.

No. Unless you "declare" that it is your personal station. The call
sign to be used is not tied to the ownership of the hardware.

You don't want to be stuck with the violations of someone else.

The club I used to belong to had 2 callsigns. As long as you held the correct level of privileges under your own call, as far as I know you could use whichever club call you wanted, as long as you completed the right logbook..!

Yep. Within the first 5 pages (of 29) the e-ham reviews, there were
two comments on the clickity-clack relays.

2034. Yaesu FT-60 Programming SW for Mac/Linux?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-12-26 01:34:10 UTC
From: KB1JMV <kb1jmv@nospam.arrl.net>
Message-ID: <kb1jmv-F1A1D8.20324825122007@comcast.dca.giganews.com>
Source record: 3443

Finally got the Yaesu FT-60 I've been pining for from the SO for xmas; was wondering whether anyone's familiar with any Mac or Linux programming software for it. I have the serial cable and a USB/serial adapter, but a day's worth of Googling hasn't turned up any software for anything other than Windows.

Is there any programming software for Mac/Linux, or am I stuck either finding a Windows machine or running a Windows instance in VMWare to program it? (Setting aside the ability to program it by hand, which looks like no fun at all, particularly given that I have a cable...)

Any and all suggestions are welcome.

73 and happy holidays,
KB1JMV

> set of handles.

The dies are removable on the West Mountain crimper (I just checked), but

it is a different style handle than the RF Industries Handle I have at
work. I didn't try to see if they would interchange and I don't know if
WMR would sell the dies seperately. I recall paying about $50 for the
WMR crimper from Powerwerx.

The WMR crimper gives a perfect crimp so long as the handles aren't
squeezed beyond the point where the ratchet releases.

And there is an important part of the equation. Is there an F.C.C.
form in which the "station" is declared as belonging to which call
sign? If I borrow a friend's HT to call back somone who calls me, I
think I am technically in violation of what station is what and
who's station.

> You don't want to be stuck with the violations of someone else.

Indeed. I think that this is one of those gray areas in which we some
times find our selves.

It reminds me of a drawn out discussion once about "Is it illegal to use
an antenna analyzer?"

After a whole lot of cogitation, the consensus was that it was indeed
illegal to use one without ID'ing, but that the F.C.C. enforcement
officer would be sorely tempted to box your ears if you turned someone
in for using an antenna analyzer.... 8^)

The Hamlib project, http://www.hamlib.org welcomes contributions for all manner of rigs. However, if the control information cannot be freely obtained, such as requiring a Non Disclosure Agreement, then we cannot utilize it. If the FT-60 has CAT control information in the manual, then

it shouldn't be difficult to add support. Otherwise, as I suspect, someone will need to reverse engineer the protocol.

I'd say virtualization is the best bet as Yaesu would not likely open source their code or port it to multiple platforms. Parallels or VMware would be my choice.

It would be interesting to know what high level language Yaesu used to create the Windows port. My guess would be C# or something using Visual Studio that locks it strictly into Windows. If it was C++ or Java a straight re-compile is all that would be necessary.

You might look into vxur/vxuw at http://www.onjapan.net/ham to see if it might work for you. I just built it from the source code. I have both an FT-857 and a VX-5R. Since Yaesu used, apparently, the same protocol for programming both, my suspicion is they kept that for the FT-60, although don't know.

The documentation says to put the rig in 'clone' mode and then you use the program command line interface to download or write memory. I may do some experimenting with my VX-5R if I can located pin-outs on the radio, probably from my mic/phone jack, for the rs232. Might be fun to try. (My email address at top is good for off-line if you wish.)

No violation. That situation can be viewed either of two ways,
both equally valid and both equally legal - you are borrowing hardware
for YOUR station and use your call sign, or you are operating HIS
station and use his call sign.

> 73

there is probably a few thing gong on

firstly when you saythe batteries are 'fully' charged are you shooting
from the hip or actually measure both volts AND amps?

if not that your premise, 'batteries are fully charged' isn't prob as
good as you thought

as you stated you've had these batteries over time as they age they
have diminished capacity , they will not hold the amp/hr rate for as
long UNDER full LOAD while a quick voltage check or radio on test
might make it appear

the things the other folks said are also true higher temp will reduce
the battery life for example , that radios also have a small draw
current even when off etc

it's highly doubtful any 'xray' or other screaning machine at airports
had any significant effect millions go thru if everyone had problems
we'd hear about it by now

if you want to learn about the machines and are afraid to ask the clerks
just google it btw i've never seen a machine w/o a name tag but u
do have to know where to look perhaps some were removed

all these things added up are significant (except luggage
screaning)

what most likely happening is that the vibration of the plain caused
the power switch to turn on drain the battery and switch off alot
of strange things happen in packing .... removing the battery and
taping over the contacts should help

otherwise i'd suspect your batteries might just be old and not up to
full snuff

you'd have to make a controlled scienfitic test to be sure whats going
on

best of luck and holidayz

You didn't miss anything by not trying to look it up. The Commish' in
its infinite wisdom made the Part 15 "intentional radiator" and
"incidental radiator" requirements very complicated several years ago,
with no real thought given to analog laboratory measuring equipment
such as TDRs, signal generators, and Antenna Analyzers.

The old "100 mw input" limits apply only to certain types of devices,
and in general "intentional radiators" have to be certified for
compliance with specified antenna arrangements.

Stuff like that keeps private-sector "FCC Certification Test
Facilities" in business.

There a pile of definitions that define what the Maximum RF can be
for a Part 15 device these days. Frequency is one, Intentional, or
Unintentional radiation is another, Carrier, Spread Spectrum, etc.
It isn't for the Faint at Heart, to figure it out.

Phil,

In practice, is there anything that can be done about uncertified (and
very probably not-technically-compliant) intentional radiators?

Last year, after I bought a new car, I found that the remote-control
keyfob would not work reliably (or at all) when the car was parked in
a local mall's parking lot. When I sniffed around a bit with my HT, I
found that there was a strong, repetitive signal on 433.920 MHz. I
DF'ed to a local restaurant. The waiters at the restaurant use
hand-held remote terminals, which transmit the order (by item number,
apparently) back to a base in the kitchen where it's printed out by
the cooks. This makes for fast and reliable service, but the base is
apparently sending out a heartbeat transmission several times per
second. The signal is strong enough to swamp other devices on 433.920
MHz for around a hundred yards. I can pick it up on my car rig (in
SSB mode) for a couple of blocks in some directions.

One evening when I ate there I expressed curiosity and took a look at
one of the handheld terminals. It has a model-number sticker on the
bottom but there's no hint of a Part 15 registration number. I wrote
down the manufacturer name, found their website, and also dug through
the FCC Part 15 authorization database. I can't find any evidence
that this device (which is imported) was ever certified under Part 15.
I suspect that it's noncertified, and may have been cranked up to a
power level which is beyond the Part 15 limits (and certainly seems
excessive for what it's doing).

I passed the info along to my local ARRL OO, who contacted some lab
guys at the ARRL... they'd never heard of this particular problem. As

far as I know they didn't choose to follow up on the matter.

Since this isn't actually interfering with any licensed ham transmission I'm trying to make (but only with other Part 15 devices) I didn't feel that I really have standing to push the matter through the ARRL/OO or file a formal complaint with the FCC.

My gut feeling at this point is that trying to get the FCC to take this issue up with the manufacturer, importer, and/or customer (restaurant) is probably a waste of effort... can you hold out any hope that there's a way of dealing with the problem?

The device in question was a Heathkit CB walkie-talkie with a not so super regenerative receiver that I built in 1963. I suppose that radio was an "intentional radiator," but its intentions were pretty weak.... Oh, well, it led to a ham ticket.

Howard

I'm not quite sure what you mean by "inverted". ISB
sidebands have the same orientation as normal sidbands,
meaning the lower is inverted with regard to the upper
sideband and in regard to the freqencies in the original
signal, i.e., the higher frequencies in a voice are lower in
RF absolute frequency although a greater separation from the
"carrier".
Single sidband transmission goes back to its early use
for intercontental radio links such as the telephone service
from the U.S. to England provided by AT&T. I've forgotten
the dates but think it was the late 1920's. The equipment
was enormously complex compared to later ham SSB stuff. One
of the methods used for privacy was sideband inversion
applied to both sidebands, that is, the lower voice
frequencies were further from the "carrier". If one had a

reasonably selective receiver the signals could be heard
clearly. This method was used mostly by RCA. ATT used a much
more complex system which split the voice base band into
several smaller bands and "shuffled" them with or without
inversion. One could tell it was voice but not decipher it.

A couple of things here: First the Terminal System "May" be covered
by a Station License issued by the FCC, in a different Radio Service.
Second, It may very well be an illegal Import, and not Certified.
Third, the Part 15 tag may have fallen, or worn off.
I had a case where a Fast Food Joint had setup their Drive-Thru Window
Com System on a UHF/Low Freq, on what was thought at the Corporate
Level, an unused Frequency in that town. It so happened, that it was the
Input for the local Sand & Gravel Dealers .25Kw Repeater, and all the
Cement Truck Drivers could hear was, "Do you want Fries with that order,
Sir?"
On Inspection, there was NO Station License Posted, and later revealed,
not even applied for. Corp. forgot and it "Slipped thru the Cracks",
Ya, Right. It was of MAJOR concern to the Sand & Gravel Company to rescue
their repeater, so I had to issue a "Notice Of Violation" unPlug the
Power Cord, for the Base Station, and "SEAL" it, and instruct the
Manager, that if the system went back on the Air, I would be back with
the Federal Marshal, and he would be going to the Gray-Bar Hotel. My Boss
got a call from some Corp. Weenie, complaining about the inspection,
how it was all a mistake, they were Sorry they lost the License
Application, that it was all the Installation Contractors Fault, it will
never happen again, Oh and by the way could we turn it back "ON" as is,
just until we can get this all straighten out?..... Didn't even get the
chance, to comment, as SHE hit the guy with a $5000 forfeiture for
UnLicensed Operation.

Just another day in the life of an FCC Resident Field Agent.....

At 433 MHz? Not very likely.

>Second, It may very well be an illegal Import, and not Certified.

In this era this is most likely. I sent the necessary contact info to
Dave off-line to get something done about this.

I've heard that song before. Can it be played in 4 part harmony?

How very much Marlene. "The List" shows that she's still the RA in
Anchorage. I haven't seen her since the Big Let's-Rename-the-Field
Bureau-and-Then-Take-It-Apart conference that we attended 12 years ago
where most of us made up our minds to retire. Are you still in
contact with her?

Bruce, it's long since been grandfathered to the landfill. :-)

No, but I did have a chance to talk to Dave, a few years back.
He was the other RA that was left after the Blood-Letting. I
understand they still work out of the Old Anchorage Monitoring
Station Site, near the Airport, but I haven't traveled up that
way for years.
Yea, she was a real "Piece of Work". I wonder if she ever got
"Called UP" as she was a Major in the Reserves, when I worked
for her. I wouldn't want to face her down, if she had a weapon in
hand....

The TRW swap meet seems to be the only regular one in
the Los Angeles area. It was today and I was there.
Directions are on the W6TRW web site. There are occasional
treasures but also a lot of just plain trash. Get there
early, the sellers are just about gone by noon. The other
meets on the list are pretty far from the city.

2056. Scanning for "reality"

Newsgroup: rec.radio.amateur.moderated
Date: 2007-12-30 19:05:46 UTC
From: Richard Crowley <rcrowley@xp7rt.net>

I'm following a thread over in the film/TV production sound NG,
news:rec.arts.movies.produciton.sound dealing with equipment
selection and configuration for some new "reality" TV show. The
fact that these range from insipid to contemptible aside, I was
amused to note one of the equipment recommendations...

Apparently the directors/producers are using portable scanners
which are programmed to the wireless mic frequencies of the
"talent", (and with the "talent"s names programmed for display)
so that the producer/director can scan all the conversations to
find something "juicy" to send the camera crew to shoot. OTOH
perhaps it is only art imitating life where people listen to police,
fire, and other public agencies to find out what's going on. :-)

In some places (notably NYC) many audio production pros
carry computer-based wideband radios to plot local spectrum
situations in order to select reliable wireless mic frequencies.
And they are desparing at the imminent loss of the analog
TV channels (where they freuqently use narrow slices of
unused local channels for wireless mics and other wireless
functions.)

They are not alone - the entire broadcast industry is concerned about
it. We (both BC people and hams) often lose sight of the real meaning
of "secondary allocation".

I don't get it. Either they are safe or they are unsafe. Why would any number of batteries (say 2) be ok, but not 3. Once more it appears some rules are being made to have people "feel protected" rather than dealing with the actual problem....

The rules are made so that the technically illiterate "gate checkers"
have a bright line between "OK" and "not OK".

Lithium batteries are like little bombs. They are pretty dangerous,
although unlikely to cause trouble if left alone. A few years ago, the
Material Safety Data Sheets from all the manufacturers included detailed
warnings about the flammability, specialized equipment needed to extinguish
these things, and the toxicity of the vapors. About two years ago all of
the MSDSs changed to say something like "safe for transportation" and not
much else. I assume some industry pressure was brought to bear, perhaps
some carriers were reluctant to transport the things.

Nevertheless, they are not completely safe. I suspect the rules are an
attempt to balance the risks between the risk of the things and the reality
that they need to be transported.

..

Possibly because two of the larger batteries as used for
broadcast TV camcorders (etc) are at the limit of mass
of the critical (dangerous) material. There is another
discussion of this same topic over on those newsgroups
(news:rec.arts.movies.production.sound, etc.)

Of course, at the other end of the spectrum, two of the
microscopic batteries used in hearing-aids, etc. are a tiny
fraction of the mass. But the technically illeterate gate
checkers can only reliably count batteries rather than
calculating the total collective mass of lithium, etc.
